How to Build Your Own Rotary Tiller

Look what an amateur did with \$49 worth of HORMICA®

If you can use simple hand tools, you can resurface worn-out tops or put waste space to work with genuine Formica. You just cut Formica sheets to size with a carpenter's saw and apply it with Contact Bond Cement and a kitchen rolling pin.

From the 70 Formica colors and wood grains this homecraftsman selected Black Oak and Red Linen.

Look in your classified phone book under "plastic" for your nearest Formica dealer.

Send today for free illustrated instruction folder together with actual samples of Formica. Write . . .

Guaranteed by Good Housekeeping

Secting is believing. If this wash-off identification is mut on the object, it's most FORMICA.

Don't guess about your oil

Get a FRAM "INDIVIDUALLY-ENGINEERED" CARTRIDGE

FULL-FLOW OR BY-PASS—EACH TYPE OF FILTRATION DEMANDS A DIFFERENT CARTRIDGE—FRAM HAS BOTH!

FRAM FULL-FLOW CARTRIDGE

FRAM BY-PASS CARTRIDGE

MOST NEW CARS HAVE FULL-FLOW FILTRATION

Full-flow cartridges require a flow-rate ten to fifteen times as great as by-pass cartridges. Some filter manufacturers recommend using a depth type cartridge—this is dangerous! These cartridges raise oil pressure and force relief valves open... feeding dirty, unfiltered oil to engine parts. On the other hand, inferior surface type cartridges have too high a flow rate for efficient filtration. Only Fram full-flow cartridges are designed to maintain the exact flow rate for peak filter efficiency.

MANY CARS STILL HAVE BY-PASS FILTRATION

FRAM Cartridges are best for by-pass systems too. This type of system requires a depth type cartridge—not pleated paper or other surface types. Inferior cartridges cannot clean oil thoroughly. FRAM by-pass cartridges are designed to supply the proper flow of clean oil to the engine at all times.

YOUR DEALER CAN TELL YOU WHICH SYSTEM YOU HAVE. FULL-FLOW OR BY-PASS, FRAM CARTRIDGES ARE INDIVIDUALLY-ENGINEERED FOR YOUR CAR'S ENGINE. INSIST ON FRAM!

FRAM CORPORATION, Providence 18, St. 1. Fram Connets Ltd., Stratford, Out.

PICK YOUR OWN SUCCESS STORY FROM THIS PAGE

These are the true stories of people who seemed trapped in routine, low-pay shaky jobs. Handicapped by lack of proper training, they couldn't get the things they wanted out of life-more money, a job they liked, security and happiness.

They are a small sample of the thousands of men and women-young and old-who turn to I. C. S. for help. Their will-to-learn plus I. C. S. training have changed the course of their lives.

Are you discouraged with your job and pay and feel you can't improve yourself because of lack of specialized education? Well, these men and women were in the same boat. With L.C. S. training, one of these success stories could be about you.

I. C. S. is the oldest and largest correspondence school, 277 courses. Business, industrial, engineering, academic, high school, One for you, Direct, jobrelated. Bedrock facts and theory plus practical application. Complete lesson and naswer service. No skimping. Diplomu to graduates.

Winn \$5000 contact.-"After my L. C. S. courses I secured a new position." says Mr. Cecil Rhodes. My income has more than doubled and I recently won a \$5000 sales contest.

From clock to Assistant Estimator, thanks to I.C.L. "Any way you look at it," weiten Mrs. Edna James, "the time and money one spends for I. C. S. Courses will be repaid a thousandfold."

"As a sollege graduate, I found I.O.S. very valuable." Robert Lee took the I. C. S. Course in Advertising, is now Promotion Manager for a large corporation. "I. C. S. got me started on the way up," he says.

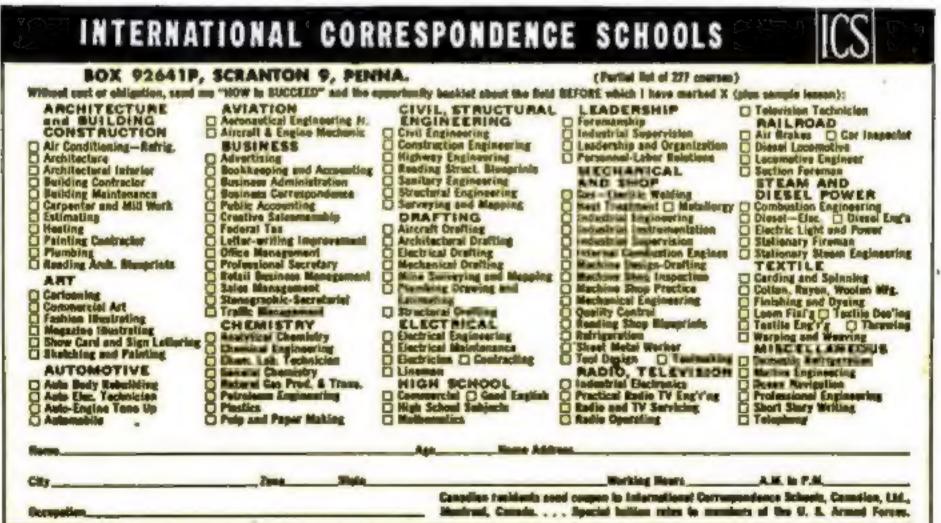

From \$162 to \$386 a month-"E.C.B. made my engineering work more interesting," Frank Bachtik tella us," I wasa Jr. Draftsman making \$152 a month, My present income is \$385.25 a month."

3 FREE BOOKS-a 36-page pocket-size guide to advancement, a gold mine of tips on "How to Succeed." Also a big catalog outlining opportunities in your field of interest and a sample I.C.S. lesson (Math.).

For Real Job Security-Get an I. C. S. Diploma!

How a man of 35 can retire at 55 with *300 a month

"Never knew I was a born craftsman until I retired. But. believe me, nothing has ever given me more satisfaction than the first shelves I built with my own two hands. Today I'm working on our hi-fi set. You see, I'm still young—only 55. I retired to keep busy, but strictly at the things I always wanted to do, I've been turning out some really beautiful furniture in my basement workshop. But if it weren't for that \$300 check each month, I'd still be at the plant worrying about production figures instead of producing on my own.

"Indirectly, I have my father to thank for that income. Twenty years ago we were right in the middle of the depression. My father had always told us he hoped to retire at 65. But when the time came, his savings weren't large enough to rely on, so he was forced to keep on working. I was 35 then. My job promised a good financial future, so I went from day to day without thinking ahead.

"Then one day my father pointed out that he had had the same kind of promising job when he was my age. He and my mother had lived comfortably, sent us children through college, but somehow he had never been able to save enough to retire.

"I began to think seriously. With

PHORNIX MUTUAL

Plane for Women,"

LIFE INSURANCE Co.

a wife, two children and a third on the way, I hadn't saved much. As the children would grow older, expenses would increase. Even if I were able to save, I might outlive my savings.

"I started reading everything I could on ways to retire. One day I saw an ad for a plan that seemed made for me. It was called the Phoenix Mutual Retirement Income Plan. If I started at a young enough age, this plan could provide a life income from \$10 to \$300 a month.

"I clipped the coupon and sent for the booklet. It explained all about Phoenix Mutual Plans. I discovered I'd actually be able to retire at 55 instead of later as my father had suggested. That fact alone was enough to make me decide on Phoenix Mu-

tual, but I carefully compared it with all other plans. It was still Phoenix Mutual for me.

"Shortly afterward I applied and qualified for a PhoenixMutual Plan. That was only twenty years ago. When my first check for \$300 came, I retired. I've a new career in my workshop—my ambition for years."

Send for Free Booklet

This story is typical. Assuming you start at a young enough age, you can plan to have an income of \$10 a month to \$3,000 a year or more—beginning at age 55, 60, 65 or older. Send the coupon and receive, by mail and without charge, a booklet which tells about Phoenix Mutual Plans. Similar plans are available for women—and for em-

Experimental model of Bell's new high-frequency transistor. It has a cut-off frequency of at least 500 mc and can be used to amplify 2500 independent voices simultaneously.

THE TRANSISTOR

that smashed a frequency barrier

A new transistor invented at Bell Telephone Laboratories can provide broadband, high-frequency amplification never before possible with transistors. The big leap in frequency is made possible by a diffusion process that earlier enabled Laboratories scientists to create the Bell Solar Battery.

This transistor is a threelayer semiconductor "sandwich." High-frequency operation is obtained by making the central layer exceedingly thin, This had previously been difficult to do economically.

The new diffusion process, however, easily produces microscopic layers of controllable thickness. Thus it opens the way to the broad application of high-frequency transistors for use in telephony, FM, TV, guided missiles, electronic brains and computers.

The new transistor shows once again how Bell Laboratories creates significant advances and then develops them into ever more useful tools for telephony and the nation.

Scientist checks temperature as arsenic vapor diffuses into germanium, creating 4/100,000-in. layer.

BELL TELEPHONE LABORATORIES

Carpy Indicated

Improving America's telephone service provides careers for creative men in scientific and technical fields

If your heart is set on a larger income and all that it means . . . better home-fine car-larger bank account-more of the good things of life. . . .

If that's your ambition and you are really serious about it, then you owe it to yourself to get the REAL FACTS about Accountancy, and the many good-pay opportunities that can be YOURS through LaSalle's famous Problem Method plan.

It matters not whether you've had a single day of experience in this field-or whether you have already started but want to climb higher. LaSalle's expert training is designed to take you from where you are . . . to where you want to be . . . in higher positions and a lifetime career of security and good income.

WHY YOU CAN'T FAIL TO GAIN

You see on this page a panel of experts who know Accounting from A to Z . . . all the way from Basic Accounting, on up through Accounting Systems, Cost Accounting, Auditing, Income Tax, and training for the C.P.A. certificate. These are only part of our instruction staff. But what is most important to you . . .

... These C.P.A.'s and Expert Accountants know how to impart their knowledge to others . . . how to help you prepare quickly yet thoroly for success in this lucrative field.

The proof? What Accountance stronger proof could there

be than that more than 4,200 Certified Public Accountants (one out of every 13 of the U.S. total) has trained with LaSalle? Or the hundreds of thousands of men and women whom LaSalle has helped qualify rapidly for more money, a brighter future, in a highpay-lifetime career? These thousands came to us with different backgrounds of experience and varying degrees of ambition. Many have reported raises and promotions after only a few weeks of training. Thousands of them have written to say they are now earning 50 % more—even double their former incomes-often in less than a year. These letters are published in book form for your inspection. They were written by real people, with real income, problems and ambitions-people who might be your next-door neighbor.

Yes, if you are really sincere in wanting to better your positionstart your income climbing-enjoy a lifetime career of high standing and high reward—this friendly staff of experts can help you.

ger pay. They can do the same for yout

SAMPLE LESSON SENT FREE MAIL COUPON BELOW

DOING. My training includes kits of parts which you use to build equipment and get practical experience on circuits common to both Radio and Television. Shown at left is the low-power Broadcasting Transmitter you build as part of my Communications Course.

Now! Turn Your Waste Gas Into SUPER POWER!

T'S TRUE! Now you can get the breath-taking acceleration . . . jack-rabbit starts . . . blazing new power that you've dreamed about for years—simply by harnessing the row, unburnt gasoline that your engine is wasting today!

You can get performance from your present car that will make your friends gasp with astonishment-and you can save \$25, \$50, even \$75 a year on gas bills alone doing it!

Yes! You, yourself can fit this we quasantee amazing GASOLINE ATOM- TOUR SAS LAVINGS! IZER onto your car to as little na 20 casy manutes! And it is quaranteed to pay you back your full purchase price, in gas sav ings alone in the first I to 4 short months that you use it.

By RICHARD JOHNS

Mr. Car Owner! How would you like to have the driving thrill

Picture this yourself! Next weekend go down to your carthe same tired car you've been driving for years. You've made non simple change to that car no easy your 16 year old min could do at But now when you turn on the ignition, a modern mirror of engineering ocsence comes to life tender your hond.

From the very first moment. you'll are and feel the difference in that engine. That engine will hum with new, throbbing power When you release the emergency brake, your car will glide out of He parking space roll down the striet with your foot hardly touching the peda. Every 30 or 40 secretile, give that car an extra shot of gas ... feel it spurt ahead test the new power that's sing-

ing under your lend! We gall you to pull up to mother car at the stop tight of approximately the same year and make as your own. Wast until the light changes to green. Let the other car start first. Wait toll the other car gets had way across the street And then stem your jost diese on the par pedal.

Before that other car has even eromed the street you will have enught up with him For one heiet serond, you and that other car will race fender to lender Then you will flash away from you will leave him a fullyour rear view mirror and see the startled look of amazement in the other driver a eyes

Learn at Home SPARE TIME to Fix. Electrical Appliances

To build a better future, get into a field where there's much important work and the security that comes from knowing a good trade. Servicing electrical appliances offers that OPPORTUNITY. Every wired home has an average of 8 electrical appliances. Up to 10 million new appliances are sold every year and owners pay well to keep them in repair. That's making a fast-growing need for trained men.

Start Soon to Earn \$3, \$4, \$5, an Hour Extra in Your Spare Time

Start soon to fix electric toasters, clocks, fans, vacuum cleaners and other appliances for neighbors and friends. Work in your basement, garage or spare room. Pick up \$3 to \$5 an Hour extra that way. It's easy to increase your earning power—to pay for this training many times over with your spare time earnings.

Learn and Earn with Multi-Use Tester Built with Parts We Send

This course includes the parts to build a portable, sturdy Appliance Tester that helps you locate electrical defects quickly and easily. You use it to learn and do actual electrical appliance re-

pair jobs. If you want better pay learn this good trade. No need to give up your present job. You can train at home in your spare time for only \$2.50 down and \$5.00 a month. A small price to pay for increased earnings, a more secure future. Paste coupon below on a 2c postal or mail in envelope for free book and sample lesson. Address National Radio Institute, Dept. BB6, Washington 9, D.C.

SIMPLIFIED DETAILS IN THIS BOOK

With "How to Build and Repair Your Own Furniture", big 256-page "how-to" book, you'll be able to own that furniture you've always wanted—and make your present furniture look brand-new! Popular Science Editors have poured all their knowledge and skills of home furnishing into one great book written especially for men who want to furnish their homes handsomely—at little cost! Detailed, easy-to-follow photos and directions make it easy!

BUILD FURNITURE FOR EVERY ROOM IN YOUR HOUSE!

You can make coffee tables, chairs, desks, lamps, book-cases, kitchen equipment, consoles, cabinets, children's furniture, plastic furniture, cabinets—for all types of decorating—period or modern! Most of the 163 simplified projects can be done with simple tools found in any home!

INVENTORS

Learn how to protect your invention. The U. S. Patent Laws provide that any new and useful art, machine, article of manufacture, or composition of matter, or any new and useful improvement thereof, may be patented if the act of invention is involved. Therefore, every inventor with a valuable invention should take advantage of the Patent Laws and proceed for patent protection in order to safeguard his rights.

A patent gives the inventor the exclusive right to prevent others from making, using, or selling the invention claimed in the patent for a period of seventeen years.

The Patent Laws were enacted for the benefit of the inventor to give him protection for the features of his invention which are patentable. These features must be properly and concisely set forth and claimed in a formal application for patent, in order to comply with the requirements of the Patent Laws. For that reason, unless the inventor is familiar with patent matters, he should engage a competent registered patent attorney or agent to represent him. We are registered to practice before the U. S. Patent Office and are prepared to serve you in the handling of your patent matters.

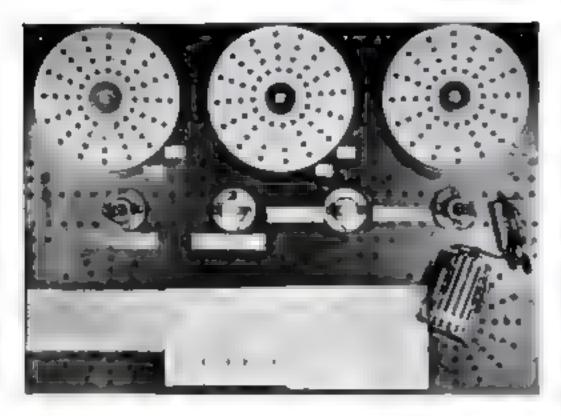

A specially prepared booklet entitled "Patent Guide for the Inventor", containing detailed information with respect to patent protection and procedure, together with a "Record of Invention" form will be promptly forwarded to you without obligation upon request.

Registered Patent Attorneys

62-B DISTRICT NATIONAL BUILDING WASHINGTON 5, D. C.

Can you <u>think</u> faster than this Machine?

BE CAREFUL before you answer, GENIAC, the First electrical brain construction kit is equipped to play tic-tac-toe, cipher and encipher codes, convert from binary to decimal, reason in syllogisms as well as add, subtract, multiply and divide. Specific problems in a variety of fields can be set up and solved with the components.

Connections are solderless and are completely explained with templates and a step by step manual of instructions. This covers thirty-three basic circuits and shows how new ones can be designed by you.

GENIACS are fun for you and for your family. You will enjoy demonstrating at parties or in school a machine which does such a variety of computing, game playing and problem solving operations. For example one of the "problems" is "THE PROBLEM OF THE TWO JEALOUS WIVES" who try to keep tabs on their husbands at a summer place. Another problem "THE URANIUM SHIPMENT AND THE SPACE PIRATES" lets you move step by

step on an exciting interplanetary chase pitting yourself against the machine. When GENIAC is set up to play "TIC-TAC-TOE" your moves are matched play by play by the instant reaction of special circuits trying to outthink you. GENIAC can be set to test your intelligence, to invent codes, figure out the best circuits for complicated household or experimental wiring, it reasons, compares, solves complicated legal problems, dozens of others.

BUILD YOUR OWN GENIACS WITH THE ELECTRICAL BRAIN CONSTRUCTION KIT

You will find building and using GENIACS a won-derful experience one kit user wrote us this kit has opened up a new world of thinking to me." You actually see how computing, problem solving and game playing (Tic-tac-toe Nim) are set up for a machine and then you build the circuits yourself. When you have fin shed with the manual you have had experience with all the basic types of digital circuits and can then go on to your own designs.

If you have been intrigued by the new developments in computers circuitry, Boolean Algebra, cybernetics and automation, GENIAC is the perfect way to get into the midst of the field and know what you are

talking about Lach kit comes complete with a manual, an intro-

duction to the use of Boolean Algebra in electrical circuit analysis, all necessary wiring diagrams and a 200 page text "Minds and Machines"

Every kit is guaranteed to satisfy you even after you have used it for a week or you can return it for a

The GENIAC ELECTRICAL BRAIN CONSTRUC-TION KIT contains complete, easy-to-follow instructions for assembling all materials necessary including precision made parts that would cost over \$40 if bought separately. Plus the manual which contains over 30 exciting brain teasing games, problems, puzzies, etc. This educational horby brings hours of funand adult entertainment, yet GENIAC is so simple even a youngster can put it together.

Some of the 33 GENIACS you can build from LOGIC MACHINES: Comparing: Exceeding: Syllogism Machine; Intelligence Tester

GAME PLAYING MACHINES: Tic-Toc-Too; Nim (Think you can beat the mochine?)

ARITHMETICAL MACHINES (Binary and Decimal): Adder; Subtractor; Multiplier; Divider; Arithmetical Corrying.

CODE MACHINES: Secret Coder; Secret Deceder; Combination Locks.

SIMPLE MACHINES: Burgior Alarmy Automotic Oil Furnace Circult. PUZZLE SOLVERS: The Space Ship Airlacky The Fox, the Hen.

Some of the 33 QENIACS you can build from the completely detailed instruction manual are:

the Hired Man and the Cart; The Uranium Shipment and the Space Pirates.

ACTUARTAL: Douglet MacDonald's Will,
GENIAC parts are specially menufactured to high talerance;
they include a special six dock switch of unique design and
ever 400 components plus a book "GENIACS SIMPLE ELECTRICAL
SEAIN MACHINES AND HOW TO MAKE THEM," GENIAC is a
remarkable buy for

only \$19.95

INVENTORS

If you believe that you have an invention, you should find out how to protect it. The first step is to have a search made of the prior pertinent U. S. patents. If a report on this search indicates that the invention appears patentable you can apply for a patent, and the specifications and claims should be prepared.

The firm of McMorrow, Berman & Davidson, with offices in Washington, D. C., is qualified to take the necessary steps for you. We can make a preliminary search on your invention, advise you whether we think it can be patented, and prepare your application for patent.

Unless you are fully familiar with the U. S. Patent Laws, we recommend that you engage the services of a Registered Patent Attorney to protect your interests. The patent laws are your laws. A patent gives you the right to prevent others from making, using or selling the invention claimed in your patent for a period of 17 years.

Use these patent laws for your protection. Investigate whether your invention can be patented. If you have what you believe to be an invention, we suggest that you have this firm make a search for you.

Send for a copy of our Patent Booklet entitled "How To Protect Your Invention," containing information about patent protection and patent procedure. Along with this we will also send you an "Invention Record" form, for your use in writing down and sketching details of your invention. We will mail them promptly. No obligation. They are yours for the asking.

Give Back Those Gauges

Phil McCafferty is so right! I, too, want the gauges Detroit left out [Nov., p. 214]. Those Christmas-tree lights that the new cars have in place of real instruments may be okay for Neanderthal drivers who can't read an ammeter anyway. But I like to know what's going on under the hood.

Take oil pressure. The red light won't blink until pressure falls to around 18 pounds. Why, you could lose a bearing at 19 pounds on a hot Sunday drive down here! And there would be nothing to warn of impending disaster until you heard that awful sound of metal chomping metal.

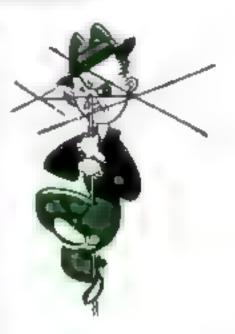

The same is true of the generator telltale. It won't warn of a discharging battery, but only of a failing generator. You could drive all the way to Dallas on a dead battery without getting that light to glow.

R. J. FRANKS, Houston

Anybody have a kind word for warning lights? PSM will award two \$25 U.S. Savings Bonds—one for the best letter for, one for the best letter against, the use of telltales in place of conventional gauges. Letters must be received by February 29 to qualify.

Aluminum Bolts for Antennas

In Mr. Mandl's very interesting article "Is Your TV Antenna Worn Out?" [Nov., p. 224], he states, "Rusted bolts should be replaced with galvanized or copper ones." Inasmuch as a good many TV antennas are made of aluminum, I strongly suggest that aluminum bolts, which are available in most hard-

ware stores, be recommended, rather than copper. Copper in direct contact with alumi-

num is not desirable. Galvanized bolts are an acceptable alternate for aluminum bolts in contact with aluminum.

> F.F. DIETSCH, Project Director Revnolds Metals Co., Louisville

Good point. Direct contact between different metals should always be avoided. It causes rapid corrosion.

His Appliances Will Work Abroad

I am in the Navy and am being transferred to a place overseas where the electrical power is 110 volts, but 50 cycles. Will my 60-cycle appliances—an automatic washing machine,

radio, toaster, freezer and all the rest-work over there?

I will give you my new address as soon as possible because I do not want to miss an issue of PSM. I am pretty sure that, abroad, I will find the magazine more useful than ever, both from the standpoint of things to do and, also, to sort of keep in touch with things back home.

> FRANK R. FOUST, Phot., USN Washington, D.C.

Thanks for the kind words. All your American-made apphances—except an electric clock—will work on 50 cycles. But the washing machine may heat up.

How to Scale Up a Drawing

I would like to build that handsome side chair ("How to Build Good Furniture," Nov., p. 178), but I am at a loss as to the detailed measurements for the parts. True, there is a scaled layout, but that's all. How do you follow such a drawing and still come up with good workmanship?

ROY CURRY, Manhattan Beach, Calif.

You enlarge the scale drawing into a fullsize pattern. Then you can take any measurements that you want off the pattern-by counting the squares on which it is drawn, or by using a rule or dividers. Here's how to

THE GRAPHIC 45?

Three focusing methods are featured in the Pacemaker Graphic 45—one of many reasons why it is the most

Micros

popular, most used allpurpose hand camers on the market. Let's examine these methods one by one.

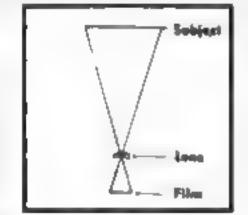

1. Coupled Rangefinder
Focusing with the new
Graphic Rangefinder for
normal eye level shooting
—fastest method for allaround use. Interchangeable cams couple it to wide
angle, normal or telephoto
lenses. As you turn the
focusing knobs on the cam-

ers bed, the two images seen through the Graphic Rangefinder window gradually merge until at the point of accurate focus of the lens, both images are superim-

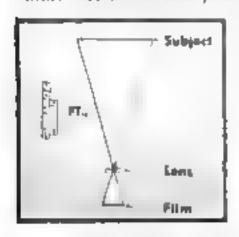

posed, clear and height Built-in Rangelite for night founding

2. Ground Glass

Focusing is the original and basic method of determining sharpest focus and subject matter to be included in the flushed picture. It enables you to see a) your picture exactly as it will appear in the print, b) what purisof your

picture are in or out of focus; c) how you can improve framing or composition. Ground glass focusing is a "mast" for the serious photographer.

3. Scale or "Guess"

Focusing for quick "off the cuff" shooting—convenient for sports, action or ordinary snap shooting. You simply focus the lens with the focusing knobs on the front of the camera bed until the focusing scales on the bed indicate the estimated distance from the subject to the camera.

For the full story on Pacemaker Graphic 45's, write Dept. PS-26, Graftex, Inc., Rochester 8, N. Y.

scale up a small drawing into a full-size pattern

First, rule one-inch squares on a sheet

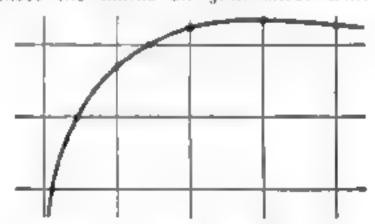

of wrapping paper at least 36 by 40 inches. Or buy graph paper printed with one-inchsquares in a stationery store

On the small drawing, note where the outline of each part crosses the small squares. On your hig ruled paper, copy these inter-

sections into the corresponding squares. You will have something that looks like a child's "connect-the-dots" game

Connect the marks on your sheet with

smooth, flowing lines. Copy exactly the shape shown in each square of the small drawing. That makes your full-scale pattern.

Warm Brick Comforts Pup

Your suggestion for keeping a homesick pup quiet by giving him an alarm clock may be a good one [July, p. 184], but I use a common brick warmed in the oven and wrapped in a blanket. It does the trick.

W. C. Fox, Nampa, Idaho

P. S. If you ever discontinue the Gus Wilson stories I will not know where to start reading your magazine. I always start with Gus.

Will it pay all of your bills today?

HERE'S WHAT AN EXPERT SAYS about the health insurance you now have...

The American Magazine recently published an important article by Albert Q. Maisel, Your Health Insurance—Will it pay ALL the bills? Here is part of what he had to say:

"The health insurance that most of us carry just isn't broad enough—inclusive enough—to solve all the medical expenses which, sooner or later, confront most families."

It's a fact—five out of ten families must pay more than half of their medical expenses themselves in spite of the fact that they have some kind of health insurance.

HAT'S WRONG with that insurance? Nothing —except, as Mr. Maisel says, it is simply not broad enough to cover all the costs of being sick.

THE NEXT TIME someone in your family gets aick there will be doctor bills. If it's the family breadwinner who is sick, family income will be cut off. And, it may be the serious illness or injury—the kind that costs thousands of dollars more than any ordinary policy could provide.

Where would you get the money to pay all those bills? You can find the answer in the White Cross Plan offered by Bankers Life & Casualty Company.

POR EXAMPLE, under White Cross you can get policies that:

Guarantee to pay you from \$2500 to \$5000 either in money to help pay medical bills or as a cash refund at maturity (NC-701) -

-Provide protection that cannot be cut off by the company no matter how often you get sick or have accidents (NC-701) -

-Provide up to \$5000.00 for a single sickness or injury. This is the new policy with the deductible feature (P86) -

THE WHITE CROSS PLAN OFFERED BY BANKERS LIFE & CASUALTY CO.

HOME OFFICE:

CHICAGO 30, ILL

An Old-Line Legal Reserve Stock Company

OFFERING LIFE INSURANCE, AND BROAD COVERAGE ACCIDENT AND BEALTH POLICIES BUTH GUARANTEED RENEWABLE AND RENEWABLE AT OPTION OF THE CUMPANY

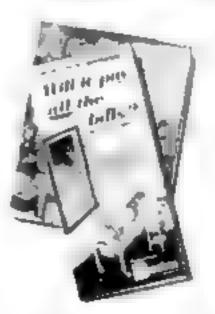

-Provide money to help pay doctor bills, surgical fees, hospital extras, and costs of drugs, dressings, and medicines as well as hospital room and board (P6, P85, P89) -

-Provide as much as \$200 a month when the family bread-winner is disabled and unable to work while confined in a hospital or at home, under a doctor's care. You can plan this income for as long as 12 months in case of an illness, for as long as two years in case of an accident (P16) —

One thing to remember—this is protection that will pay you extra money—money in addition to what you might collect from some other "hospitalization."

YOU'LL FIND all the benefits, exceptions, and limitations clearly stated in the policies. Sickness benefits cover most illnesses originating after policies have been in force 30 days; accident benefits begin immediately from date of policies.

Inventors

Take these necessary preliminary steps promptly to protect your invention by applying for a United States patent—

Sketch and describe your invention. Sign, date and have this disclosure witnessed by two people who understand your invention. Have us make a preliminary search among U. S. patents already granted for similar types of invention. We then report to you on the probable patentability of your invention and recommend your further course of action.

Write for our instructive booklet, "Patent Protection for Inventors" and our convenient "Evidence of Invention" disclosure form. No obligation.

LAW TRAINING

for

BUSINESS

[in spare time at home]

Earn LL.B. Degree

Thousands of men and women who never intend to practice are studying Law in spare time at home-not for a legal career but as an aid to business advancement.

Law today is involved in almost every major business decision. In many lines of work it is almost indispensable —credits and collections, accounting, traffic and transportation, employee relations, real estate, insurance, finance, taxation, etc. For all types of work, Law training develops keen, clear, quick, correct, and decisive thinking.

You can study LaSalle's American Law and Procedure right in the privacy of your own home—progressing as rapidly as your time and ability permit. LaSalle has, for nearly 50 years, helped more than 1,350,000 ambitious people get ahead in the business world. Thousands of letters in our files from grateful students and businessmen who have achieved greater success speak of—better jobs, more money and the satisfaction at brings, prestige and leadership.

A MOST UNUSUAL LAW LIBRARY

This training includes the fourteen-volume LaSalle Law library—AMERICAN LAW AND PROCEDURE, which is the basis of all the instruction service. This library has been compiled by leaders in the field of Law. It covers the whole basic field of Law in an orderly and simple manner that is easy to learn and understand. Collateral reading and printed lectures on legal problems which are furnished at regular intervals throughout the training, supplement the text. Law instructors personally supervise your program from the first assignment to the LL.B. degree or diploma. Under the LaSalle method you deal with legal problems—you learn by

doing—actually solving legal problems—not just memorumg rules.

WRITE TODAY FOR TWO FREE BOOKS

You are determined to get ahead—to prepare for greater future possibilities—and to earn more money. Send the coupon below and find out how to qualify yourself for the many openings available to the Law-trained man. In our FREE books, "Law Training for Leadership" and "Evidence," you will find answers to all your questions about the study of Law and the LaSalie method.

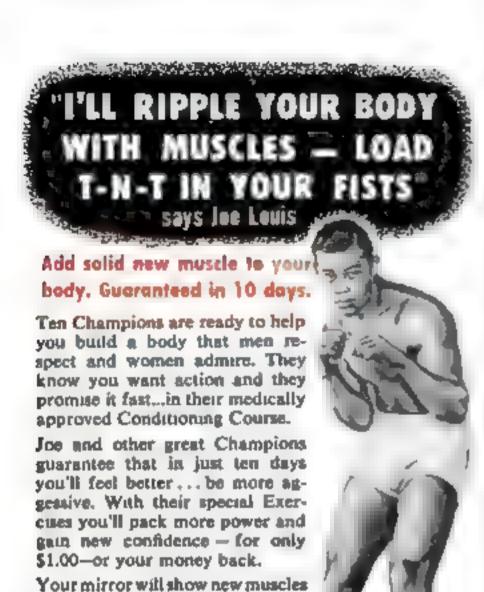

No investment is likely to pay higher returns than an investment in yourself, by enrolling in the American Law and Procedure training. Send coupon today for full information—no obligation, of course.

THE INSULATOR High voitage par unted Eban tem neu ator developed and wied only by Life-Long has a hardness in the same range os precious iewels. You can Identify Life-Long Pugs by the black in ou atom. This costly new material has 20 times higher thermal conductivity than ordinary insulators

THE BUSINESS END

New type not d afectrades have no points to burn off! The 'business and of Life-Long Plug utbezen untque a chel cadm um blect odes to pro-

duce fuller hotter spark arcing from 21 or more points and spreading around the full-360' circle Life-Long Plugs have approx implety 40 times more firing surface than conventional one-electrode plugs, glying more offerent even combout on.

THE SHELL ... Made of a new alloy developed specifically for & ferung by modarm meta urgy Joseph old style 2-piece. shells, the kile-kong she li a une precisionmachined piece fused to the Eban te insufelor under fremundous hydrau ic pressure and induction to make a positive seet In 5 prevents blow-by major cause of to are to pluge with 2-port shells

Bonded Guarantee

"I certify that the set of self-cleaning. 21 pt, Life-Long Nickel-Cadmium Spark Plugs you will receive are

identical to those used in my own car for over 100,000 miles, I guarantee that Life-Long Plugs will give you an immediate horsepower and mileage gain and will continue to fire clean, hot and steady without cleaning or regapping"

J. M. WATT, President LIFE-LONG SPARK PLUE CORP.

Only apark plug guarantee backed by a cash bond held by an independent finencial Institution (details on request).

LIFE-LONG NICKEL-CADMIUM PLUGS ARE GUARANTEED TO:

1 - End plug replacement costs

gaseline mileage

- 4 Improve acculeration
- 2-Steg up engine
- 5-Give smoother lifting
- her sepawar 3-Increase your
- 5 End angles knock 7-- Nover need

regapping

With the introduction of sensational newtype Lafe Long Nackel Cadmium Plugs, the spark plug is no longer the "most troublesome, most often-replaced" part of your automobile. In fact, you will never have to replace the plum in your car once you install a set of Lafe-Long Plugs!

LIFE-LONG-WORLD'S ONLY PLUG WITH FULL-CIRCLE FIRING

Life-Long's revolutionary "ring of fire" principle is the first major improvement in plugs in 25 years, instead of small "spot" spark arcing between the same two points, the Life-Long Plug makes a hot spark 400% to 500% greater in volume, apread around the entire circumference of the solid electrode. The piston stroke of today a highcompression engines is so powerful that it can actually "blow out" the spark produced by old type plugs. Blowing out is impossible with Life Long's full-circle spark

Heat is spread around the full perimeter. resulting in cooler electrode temperature. The causes of wear, burning and insulator failure are eliminated

SELF-CLEANING. Because the Life-Long Plug fires simultaneously inside and outside the shell, fuel mixture is ignited at the same time a powerful turbo wiping action. created by the piston stroke, burns and blows out the carbon, Power loss is prevented and you get greatly increased horsepower and gasoline mileage. In a series of road tests, some cars have shown 10 horsepower gain, mileage increase 15% and more.

PLEASE NOTE The Life-Long spork plug is d ffe ent in the how in a last are limited of place. but an entirely how end neering dere opmen.

140 Kansas Street, El Segundo, California

OIL INDUSTRY RESEARCH DISCOVERS AMAZING ELECTRODE SECRET

Research engineers of leading oil companies recently revenled that nickelcadmium is the most perfect material pet developed for the electrodes of spark pluge des qued for modern highcompression, internal combination automishile engines. The nickel cadmium enfud electrode of the Lafe-Long Plughas ideal characteristics of extremely high conductivity and duesbility being able to unthatand temperatures of 3500" indefinitely.

BUILT-IN CADALLOY CATALYST

These same research exp. neers also discovered that a new along fushick we call Cadol'oy) introduced into the combustion chamber of a plug, acts as a catalyst to produce the most efficient fuel combination, Life-Long Poigs are the first to use this important discovery!

ATTENTION, OWNERS OF 12-VOLT

AUTOS. Conventional plugs, designed for 6. volt electrical systems, do not function well in modern 12-volt systems. Life-Long Plugs are designed to handle twice the voltage enpacity of 6-volt systems. If your car has a 12-volt system, don't be misled only Life-Long gives you full plug officiency?

LIFE-LONG PLUGS ACTUALLY COST LESS! A set of Lafe-Long Nickel Codmitum Plugs will outlast six or more sets of ordinary pluge. You end replacement costs completely Yet the set of 6 Life-Long Plugs costs only \$8.95 each Set of 8 only \$11.95.

ORDER REGISTERED SET FOR YOUR CAR NOW. Life-Long Nickel Codmium

Spark Plugs come to you in a tamper-proof, laminated plastic container. Scaled

at the factory, your Life-Long Plugs are not touched until you break the seal

Remainter! Tour Money Back 10 FULL if the Let (same you receive doesn't places you!

To demonstrate your big money-making possi-ities on my proved, successful import plan, I il send you, without a penny's cost, a fisherman's hand-tied trout, crappie and blue gill casting fly it costs just over a penny abroad, and sells by mail order or through stores in the U.S. for up to 30c. Think of it! Over 1500% mark-up. And there are more than 19 MILLION FISHER-MEN IN THE U.S.—a huge and free-spending market market.

CENUINE COACHMAN, HAND-TIED CASTING FLY YOURS FREE

And this is only one example of the foreign imports with fabulous profit opportunities for men and women There are more than 25 Million amateur photographers interested in cameras. niters, lenses, enlargers, etc. Millions of foreign made watches, clocks and jewelry liens are bought in the U.S. The oversess made gift market runs into millions of dollars. There are more than 16 Million hunters interested in guns, binoculars, knives and other accessories you can import. And consider the 30 to 40 Million homemakers interested in electric sewing machines, scissors, yarns, etc.

Other markets too numerous to mention await exploitation Little wonder that World Traders make tremendous profits on low cost, high quality products. Now you too may enter this richly rewarding business with my personal guidance and help. I show you how and exactly where to get big profit imports

GET CASH-IN-ADVANCE MAIL ORDERS

Receive orders with cash enclosed. Pocket your big profits in advance and pay traders abroad with the balance to ship direct to your customers. No face to face setling No stocks to carry Or if you like to make personal contacts with buyers, then import directly for department, aportion sporting goods, camera and gift stores, etc.—without capital.

YOUR OWN BUSINESS FULL ON PART TIME

Never, to my knowledge, has there been such a fine opportunity to operate your own business without previous experience, spare or full time, from your own home; or travel abroad. There are also tremendous opportunities in export which you may handle

- Weight 4½ pounds
- Almost 3,000 clear pictures
- 58 Troubleshooting Charts
- 353 Quick Check Data Tables
- Thousands upon thousands of parts and service specifications
- The original book of its kind. and still the best! Published for 27 years.

Covers Every Model of These 22 Makes Siace 1940:

FORD OLDSMOBILE BUICK CADILLAG FRAZER PACKARD PLYMOUTH CHEVROLET HENRY J PONTIAC HUDSON CHRYSLER CONTINENTAL KAISER RAMBLER LINCOLN STUDEBAKER DE SOTO DODGE MERCURY WILLYS NA5H

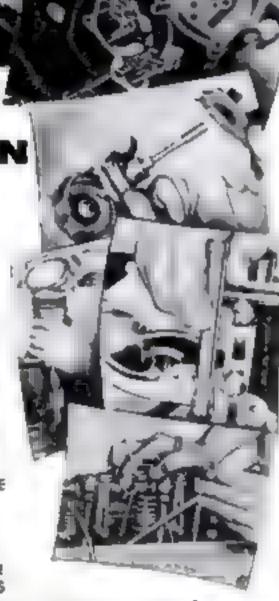

EASY! "The Chilton how-todo-it pictures are worth the entire price of the Mensol I"

FASTI "Thunks to my Chihon Manual, I did a job in an hour quether mechanic bod worked on all day!"

MELVIN WADE, Penna. GENE ARNOLD, laws

(CHILTON BOOKS ARE SOLD BY LEADING BOOK STORES)

NOW! Even beginners can handle practically ANY job on ANY make, model or part!

TUNE UP, PEP UP, fix up ANY automobile . . . even if you've never repaired a car before!

Handle practically any job "slick as a whistle."

A tune up? New rings? Ignition or carburetor troubles? Brake or clutch problems? A valve job? Something wrong with power steering or one of those tricky new automatic transmissions?

Just look up the job you want to do!

This giant, 4% pound CHILTON REPAIR MANUAL tells what to do. Then it shows you step by step just how to do it. No guess work. No lost time. You handle auto repairs easier, faster and better than you may have dreamed.

> There's a "secret" to easy auto service and this grant menual is it!

with how-to-fix-it data like this to guide you!

Chilton covers practically every part of every car on the road today. Gives complete service details on every model of the leading 22 car makes from June 1940 to the present. Over 600 models in all!

Tells how to locate troubles. Shows what work-saving shortcuts to take . . . what adjustments to make . . . what parts to use .. what mustakes to avoid . . . even what tools to use.

"Minor" details, often so puzzling to beginners, are fully explained,

From beginning to end, it's an honest-togoodness HOW-TO-FIX-IT guide NOT a 'study" book. You use it right at the bench when you've got a car to fix!

Use the CHILTON MANUAL IS days . . . FREE, if it's not all you expect . . . and more . . . return it AND BON'T OWE US A PENNY! Send coupens today to: Chilton Co., Dept. PS-26, Soth & Chestnut Sta., Philadelphia 39, Pa.

MAKE UP TO \$10 AN HOUR AT HOME WITH 50¢ WORTH OF MICRO-FLUFF

HIGH COST OF LIVING GETTING YOU DOWN

Want to add an extra \$100 or more to your regular monthly pay check in a few space time hours of pleasant occupation AT HOMET That's just the position I was in a few years ago when I ran across an Old-World formula for applying short cotton fibers to practically any surface, in such a manner that it looked and felt just like costly velvet or velour.

THIS PROCESS AMAISD ME

I spent several years experimenting until I developed what I now call the FLOK-KRAFT MICRO-FLUFF method. This NEW METHOD is far removed from the Old-World way of applying these short fibers. Also it permits the use of tiny fibers of RAYON and other modern materials in MANY COLORS in addition to cotton.

NO OVERHEAD - NO EXPENSIVE EQUIPMENT

Start in your basement, garage, attic, service porch, or even on a card table in your bedroom. With an hour's practice you can apply a few pennies worth of FLOK-KRAFT MICRO FLOFF to a yard or two of butcher paper, and make it look like \$15-a-yard velvet for window displays in the finest jewelry, gift, or department stores, etc. Takes only a few minutes and practically no effort.

MICRO-FLUFF IS BEAUTIFUL AND LONG WEARING

Truly the most amazing material you ever saw. MICRO-FLUFF comes in every color of the rainbow, is long lasting, has the TOUCH appeal of luxurious velvet or suede, and goes on practically any surface-paper, metal, wood, glass, plastic, plaster, rubber, even sponge-rubber. It is wonderful to line silverware or hosiery drawers, cover and line jewelry boxes, decorate lamps and lamp shades, finish the inside of autotrunks or glove compariments (to protect luggage and accessories from scratching) re-cover women's party shoes, phonograph turntables. etc. Apply to toys, figurines, wall plaques, signs, store displays and a thousand-and-one other Items, new or old. FLOK-KRAFT MICRO-FLUFF makes old objects beautiful and salable - increases value of many new products by 500%.

Read What Others Say ...

"Received the outfit and everyone that saw it is very enthused. I only had it about thirty minutes and got an order for a \$100 job."

Mr (' H., Maryland

Got \$32.50 for those 7 trunk interiors for about 4 bours work \$7.50 per trunk."

J O Mo

I have received my order and believe me I m to a passed and happy as as live made myself MORF, than the cost of my supplies already, and I we still got more jobs to do "" the G. W. S. tarolina.

pleased with your course and I'm being swamped with work to do. W. F. Penn

BIG-PROFIT ORDERS COME FROM NEIGHBORS, GIFT SHOPS, STORES—ALSO MAIL-ORDER

Every household has one or more items that can be saved from discard by a FLOK-KEAFT job, Decorate store display cases and windows (jewelers love this) and also supply them with fast-selling FLOK-KEAFTED gift items and other merchandise. Manufacturers are prospects for contracts to apply FLOK-KEAFT to furniture, instrument cases, luggage, and hundreds of other products, Every ne shborhood needs a FLOK-KEAFTER, HELP US FILL A HUGE DEMAND.

Since succeeding beyond my wildest dreams in my own FLOK-KEAFT business. I have concentrated on helping ambi-

FLOK-KRAFT business, I have concentrated on helping ambitious men get started in the same way to build a successful future, free of time clocks and nagging bosses. Here are three pliers that will help you do a better job—three tools that should be in every workman's kit.

Klein pliers are recognized by electricians, linemen and good workmen everywhere as the standard of comparison by which other pliers are judged.

The work you do is only as good as the tools you use. Be sure the tools on your bench or in your kit include genuine Kleins, famous for quality "since 1857."

Your hardware store has Kleins in stock or can get them for you quickly. Look for this new display board. It shows the most popular items in the Klein line.

Roy Loutzenhiser drives 38,000 miles ... saves \$72. with 17 pt. Life-Time plugs

MESSAGE FROM FRANK WILLIAMS, INVENTOR OF LIFE-TIME SPARK PLUGS Dear Friends:

Some Life-Time Spark Plugs have now been out just about a year. Time enough for first users to start writing me about life and performance in their own cars. Roy Louisenhiser of Antelope, Montana, writes that his set has fired hot and clean for over 38,000 miles in his 1953 Studebaker V-8. That's a saving in plug purchases of about \$22 when you add it up. But he also wrote me that his gas bill went down just about 10% which checks out almost on the button with Eddis Edmunds dynamometer test which shows 11% fuel improvement. The way I figure, that adds up to about \$72 depending upon what you pay for gas! I don't

say you can save this much money in a car that's burning Some cil or isn't rightly tuned, but you can have the cost of a couple sets of ordinary plugs

and a barrel of gas any time. Try m set and let me hear how you like them.

Frank Elektriams

Start a profitable manufacturing business in spare time

with your own home as your headquarters

RIGHT at this moment there is a tremendous demand for new business enterprises in a branch of the plastics industry. Fortunately, this is a type of manufacturing business that does not require heavy or expensive machinery, rented space for storage, production or sales. A portable hand machine does the work wherever electric current is available, and the working area can be in almost any part of your home.

The opportunity that is open to you today, is to meet this growing demand in a new industry by establishing yourself as the manufacturing agent in your own trading area. Several hundred of our machines are already in use in both large and small communities. Some are even being operated successfully by women whose family duties make it necessary for them to be at home during the day, but whose family income is not enough to meet rising expenses. Most are being opcrated by men. Many started in spare time just to pick up an extra five or ten dollars for an evening's work. They found the work so profitable that some have now given up former jobs to devote full time to a business of their own.

One of our manufacturers gets all of his business by mail. Orders and money come to him in envelopes and he sends his products out the same way. Another delivers his entire output to stores in the vicinity. An-

other does a wholesale business supplying other manufacturers who do the seiling. Still another works with advertisers in the manufacture of plastic advertising novelties and special-ties.

The operation of the machine is simple and easy for anyone to learn. It does not require any knowledge of chemistry, mechanics, or electricity. And what some say is best of all, a manufacturing business like this enables a person to make good money without any house to house canvassing. The machine turns out from \$5.00 to \$15.00 worth of work per hour and it can be operated for as short or long a time as you wish.

We have prepared a simple step by step instruction manual that not only tells how to operate the machine, but also tells how to get the business coming in at a profitable clip right from the start. We will lend a copy of this book to any serious minded man or woman with the

understanding that a copy will be given them free if and when they purchase a machine—or the copy we lend can be returned if you decide not to go into the business. Reading it will not cost you anything.

If you are interested in a nice little home business that can bring in an extra \$60 or more for ten or twelve hours work in spare time, send your name. All information on the book and machine will be sent free, postage prepaid and no salesman will call to bother you. read about it in the privacy of your own home without outside pressure and then decide whether you'd like to take the next step. Address your envelope to me in person. Bend me the coupon below. Or, if you prefer send your name on a post card and ask for "Free information on Starting a manufacturing business at home." Either way, send your name today and find out about this wonderful new fast growing money-making business.

DIESEL AUTO MECHANICS DESPERATELY NEEDED

Big Pay... Good Future

NEVER IN HISTORY has there been such a tremendous demand for Diesel and Gasoline Mechanics. Authorities report a shortage of 150 000 auto mechanics. Virtually all heavy power equipment such as stationary power plants, farm tractors, boats, trucks, buses, earth moving and construction equipment is rapidly converting to Diesel Power, creating the greatest demand in history for Diesel Mechanics.

YOUR SUCCESS IN THIS FIELD depends upon the reputation of the school you attend and the quality of training you receive. It is only natural you will want and should have the very best in training. We urge you to send for our big free booklet, which is almost like visiting with us.

THIS BOOKLET clearly emphasizes the advantages of THE WORLD FAMOUS BAILEY METHOD of "LEARN-BY-DOING" on the most modern equipment...

TAKES YOU ON A STEP BY

STEP CAMERA TOUR through our spacious modern shops, where you see BAILEY students in action

IT EXPLAINS WHY IT IS NECESSARY TO KNOW BOTH DIESEL AND GASOLINE MECHANICS, in order to get the BIG PAY JOBS and advance rapidly in these fields!

IT POINTS OUT HOW OUR BAILEY METHOD permits you to learn both Diesel and Gasoline Mechanics for the price of one... in the amount of time ordinarily required to learn just one of these subjects... and finally it explains completely how you are provided with part time employment and bousing during your training period and the success we are having in the placement of Balley (and ustee with America's leading companies.

WE ARE CONFIDENT after reading the material we send you ... you will agree we offer the finest training in the country.

Students tearning trouble shouting an Motor Analyzer

Students fearning Diesel operation.

Approved for Veteran and Non-Veteran

You Can Depend On

STRONGER Yet SAFER

Won't Upset The Stomack

Anacin® not only gives stronger, faster relief from pain of headache, neuritis and neuralgia-but is also sofer. Won't upset the stomach and has no bad effects. You see, Anacin is like a doctor's prescription. That is, Anacin contains not just one but a combination of medically proven, active Ingredients. Scientific research has proved no single drug can give such strong yet such safe relief as Anacin. Buy Anacin Tablets today!

Shrinks Hemorrhoids New Way Without Surgery

Science Finds Healing Substance That Relieves Pain-Shrinks Hemorrhoids

For the first time science has found a new healing substance with the astonishing ability to shrink hemorrhoids and to relieve pain - without surgery.

In case after case, while gently relieving pain, actual reduction (shrinkage) took

blace.

Most amazing of all - results were so thorough that sufferers made astonishing statements like "Piles have ceased to be a problem!"

The secret is a new healing substance (Bip-Dyne*)-discovery of a world-famous

rescarch institute.

This aubstance is now available in suppository or eintment form under the name Preparation H.* Ask for it at all drug countars—money back guarantee. "Reg. U. S. Pat. Off.

RUBBER STAMP DIVISION

Start at home in spare time with this little table top machine

The multi-million dollar Rubber Stamp Business—once con-trolled by a few big companies—is now being taken over by small home operators—one in each community throughout the U.S. Men and women who have this mespensive machine can turn out hage quantities of Rubber Stamps with special wording that buyers once were forced to order from big cities. Material conting only 27c makes a stamp that sells for \$1.60. The machine that does the work is simple and easy to operate and it turns out as many as six Rubber Stamps at a time each with different wording such as names addresses, notices, stock numbers, prices and other copy" needed by offices, (actories and individuals. Working full capacity, it can earn as much as \$9.20 an hour for the operator. Now you can get into the bigpay business yourself, with your own bome as beadquarters. You don't need any experience. We supply everything including complete instructions and eight ways to get business. coming in fast Start making up to \$9 20 an hour from the very beginning Cash in on the profitable Rubber Stamp Business in your community right away.

Read the complete and fascinating Rubber Stamp story in a but 110-page Book recently published by the Warner Electric Company The book is profusely illustrated with more than 100 pictures and photographs. And you can read it for a full two weeks without ruling a penny of your own money.

Here's what the new WARNER PLAN Tells You about Making Money with RUBBER STAMPS

MEXICAN Law General Practice Altorney Apartado 79, Juniez, Chih Mexico.

Bass Fishermen will Say I'm Crazy... until they try my method!

But, after an honest trial, if you're at all like the other men to whom I've told my strange plan, you'll guard it with your last breath.

Don't jump at conclusions, I'm not a manufacturer of any fancy now lure. I have no revis or lines to sell. I'm a professional man and make a good living in my profession. But my sil-absorbing hobby is fishing. And, that by accident, I ve discovered how to go to waters that everyone else says are fished out and come in with a limit catch of the biggest base that you ever saw. The savage old base that got so big, because they were "wise" to every ordinary way of fishing.

This METHOD is NOT spinning, trolling, casting, fly fishing, trot one fishing, set a se fishing, hand line fishing, live bait fishing, jugging, netting, trapping, seining, and does not evan is stiy recemble any of these standard methods of fishing. No live bait or prepared bait is used. You can carry all of the equipment you need in one hand.

The whole method can be learned in twenty minutes—twenty intoutes of fascinating reading. All the extra equipment you need, you can buy locally at a cost of less than a dollar. Yet with it, you can come in after an hour or two of the greatest excitement of your life, with a stringer full. Not one or two minerable 12 or 14 inch over-sized keepers—but five or six real beauties with real populage behind them. The kind that don't need a word of explanation of the professional skill of the man who caught them. Absolutely legal, too—in every state.

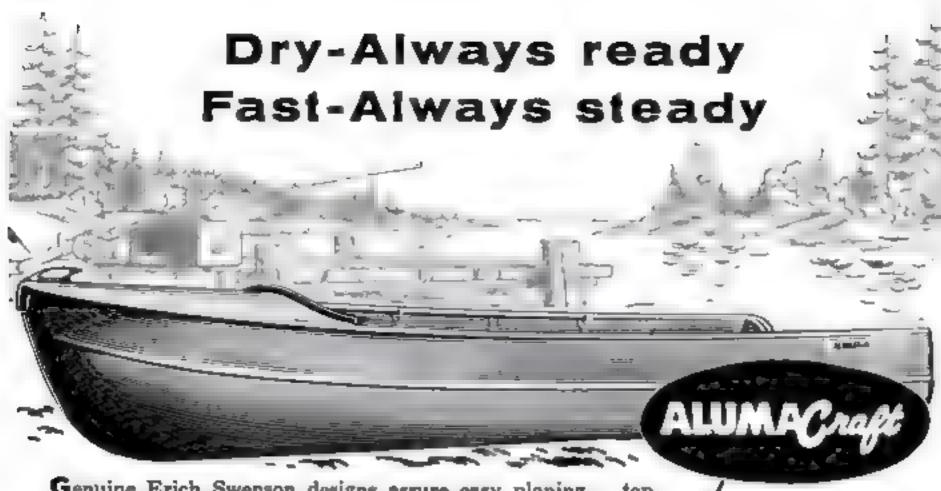

This amazing method was developed by a little group of professional fishermen. Though they are public guides, they rarely divulge their method to their patrons. They use it only when fishing for their own tables. It is probable that no man on your waters has ever seen it, ever heard of it, or ever used it. And when you have given it the first trial, you will be as closed-mouthed as a man who has suddenly discovered

agold mine. Because with this method you can fish within a bundred feet of the best fishermen in the county
and pull in ferocious hig ones while they come home
empty handed. No special skill is required. The method
is just as deadly in the hands of a povice as in the
hands of an old timer. My method will be disclosed only
to those few men in each area who will give me their
word of honor not to give the method to anyone else.

Send me your name. Let me tell you how you can try out this deadly method of bringing in hig ham from your "fished out" waters. Let me tell you why I let you try out my unusual method for the whole fishing season without risking a penny of your money. Send your name for details of my money back trial offer. I here is no charge for this information, now or at any other time. Just your name is at I need. But I guarantee that the information I send you will make you a complete skeptic—unt I you decide to try my method! And then, your own catches will fill you with dishelper. Send your name, today. This will be fun.

ERIC H. FARE, Libertyville 18, III.

Eric H. Fare, Libertyville 18. lillnois Dear Mr. Fare: Send me complete information without any charge and without the slightest ob-
light, on. Tell me how I can learn your method of catching big ham from "fished out" waters, even when the old timers are reporting "No Luck."

LATE NEWS ...

The cancer fighters are winning battles, if not yet the war. First trials of a new blood test showed it to be amazingly accurate at detecting early stages of cancer. A good cancer test would be very valuable, since cancer can usually be cured if recognized soon enough. And some headway is being made against leukemia, the tragic blood cancer that often strikes children. By using cortisone combined with mercaptopurine, doctors at New York's Memorial Center have kept 47 percent of young

leukemia patients alive for a year or more. Untreated, only five percent of the leukemia sufferers could be expected to survive the year,

OF U.S. SOLDIERS FROM ARMY QUARTERMASTER CORPS Don't argue with radar

cops. Their device measures automobile speeds very accurately. When it does err, it usually errs in favor of the speeder, according to a study made for the Buffalo, N.Y., Traffic Department.

The Russians are building what will probably be the world's biggest atom smasher—a 10-billion-volt synchrotron. (The biggest U.S. machine is the University of California's Bevatron—

six billion volts.) To run an atom smasher of this size, 140,000 kilowatts of electricity will be required. That's the total output of a big city power plant.

Fourteen-inch lites, one inch smaller than the present ones, are in the works for '57. Goodyear says that its small tires will be fatter than the 15-inchers, and will carry 20 pounds of air pressure.

Latins to get A-power. Orders for three atomic-power plants are being placed by American & Foreign Power, operator of utilities in 11 Latin American countries. Each plant will generate 10,000 kilowatts.

Hormones save teeth, at least in animals. Dr. Irving Glickman of Tufts University reported that injections of the female sex hormone, estrogen, into animals with pyorrhea reconstructed jawbone tissue, preventing loss of teeth.

Navy plans giant A-sub. Twin atomic engines will power the Navy's biggest submarine. Its speed — over 30 knots — will match the fastest surface ship.

New building materials are in prospect for American homes. Among those expected soon:

- Concrete boards—wood excelsior combined with Portland cement. They unite the qualities of both materials.
- Wood bricks, made from short sawmill leftovers.
- Insulation six inches thick, to shield air-conditioned homes from attic heat.

Adjustable power steering is available on a new British ear, the Armstrong-Siddeley Sapphire. You can turn it up for parking and traffic, then cut down on the power assist for highway driving.

Good book. Model T fans will have a grand time with Tin Lizzie, by Philip Van Doren Stern (Simon & Schuster, \$3.95). Besides facts, jokes, even songs about the most famous car ever made, it describes the Flivver that PSM restored.

The secret of Pontinc's blazing go is in the teamwork of two engineering masterpieces . . . the mighty Strato-Streak V-8 . . . and the revolutionary new Strato-Flight Hydra-Matic*!

It's the sort of power and go you dream about. But this time it's real.

Behind the wheel of the flashing '56 Pontiac you command an engine virtually alive with spirit... and a terrific urge to be on the move. A cubic displacement of 316.6 inches gives you terrific take-off! A whopping big 8 9 to 1 compression ratio squeezes the last ounce of go out of every drop of gas.

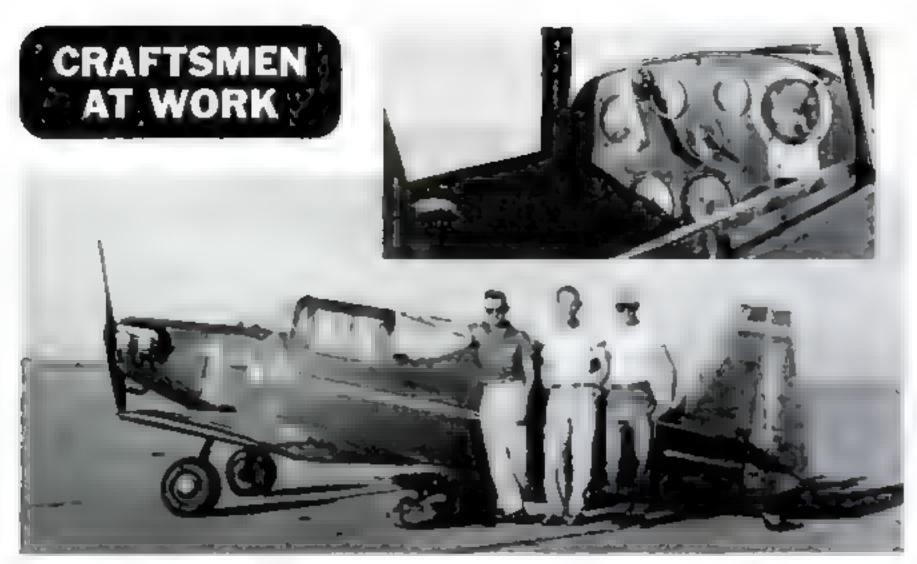

That's power ... blazing 227 horsepower!

You pure along peacefully, completely unaware of the other half of Pontiac's great power team . . , the fluid-smooth Strato-Flight Hydra-Matie. There's perfect harmony here (it was carefully engineered that way) . . , for this great new automatic transmission takes the tremendous thrust from the engine and utilizes every ounce of it, passing it on, smooth as silk, to the rear wheels. An amazing new controlled fluid coupling combined with the efficiency of gears does the trick!

Test the flashing new '56 Pontiac yourself. But hold on to your hat, you'll be piloting the greatest "go team" on wheels, "An extra cost option.

PONTIAC says GO

and the price won't stop you!

Homemade Plane. Fred Clifton and sons Gene and Jack put in two years of spare time and \$800 building this 625-pound aerial hot rod in the family garage at La Junta, Colo. The single-place monoplane cruises at 160 m.p.h., can hit 180. An 85-hp.

Continental engine that cost \$325 spins the \$125 variable-pitch propeller. About \$100 worth of steel tubing went into the 17%-foot fuselage. The fabric took \$75, the factory-rebuilt instruments \$50. The standard landing gear was salvaged from a wreck.

Tin-Can Artist. When a teacher in the U.S. sector of Berlin challenged his handicraft class to create toys from scrap, the student at left turned out two unusual ones from empty cans and boxes. Wire, cord and screws hold the parts together. The motorcycle rider appears to be a working model.

For-J-Let. A Henry J chassis, Ford V-8 engine and overdrive transmission and Chevvy springs and radiator were among the parts that went into the roadster below, christened a For-J-Let. The top is black orion on a frame from a 1941 Pontiac convertible. The Reverend Wallace Gardner, Rushville, Ind., estimates that he spent more than 900 hours and about \$1750 building the car.

A Division of Outboard, Marine 6? Manufacturing Company
In Canada: Manufactured by Evinrude Motors, Peterborough

THIS MEANS that you are more completely protected from "flash-over" that can cause power-wasting missiring. "Fiash-over" can occur when insulator tops get coated with dirt or moisture. The AC rib design has an umbrella effect in preventing diff or moisture accumulation. AC's rib contour also lengthens the path the "flashover" must take. These factors practically end "flash-over."

plus CONDUCTASEAL, an exclusive AC center-wire-to-insulator seal formed from metal and ceramic materials fused in the assembly process, This seal prevents power-robbing "blow-by" yet acts as a splendid conductor for top ignition performance.

plus HOT TIP, another AC exclusive feature! The AC insulator tip is long, and deeply recessed to heat fast, burn away carbon and oil residues that would soon foul ordinary plugs. Put in AC HOT TIP Spark Plugs, and enjoy the full performance that was built into your engine.

AC SPARK PLUG THE ELECTRONICS DIVISION of GENERAL MOTORS

"Highest-priced prefab," this two-level house by Scholz Homes sold in Cleveland for \$56,000.

What's new in

Prefab Homes

One in every seven new homes this year will be factory-built. Some are aimed at the Cadillac trade, with \$50,000 price tags.

By John L. Springer

ODERN architects will be enthusiastic about the new homes that prefabricators have brought out for this year's customers. They are long and low, with vast expanses of glass. The roofs are flat or pitched only slightly, and have wide overhangs.

Homes built this way a decade or so ago were often said to look "cheap." Now it's smart to have such a home. If you like this contemporary style, you can often obtain a home more reasonably now from a prefabricator than from a conventional builder.

This is not surprising when you consider how prefab homes are built. They usually consist of panels made in a factory so that they can be put together quickly elsewhere. This method turns out one-story homes with low roofs more easily than it does older styles.

The manufacturers have taken pains, however, to see to it that their houses still look like houses, rather than barns or factories. And they have found many new ways of making each house look dis-

MODERN HOMES' "MANOR" has low hip roof with wide overhang, dazzling features like bed-

side switches to open and close windows. Built on an average-priced lot, it costs about \$22,000.

tinctive, so that a row of prefabricated homes no longer needs to look monotonous and dreary.

The first prejab homes were usually about the size of a chicken coop. Now such homes are bigger and roomier. This is a logical development, too, because what most prefabbers actually sell is the shell—outside walls, inside partitions, and roofing. The rest of the things that go into a house—masonry, plumbing, heating, wiring, flooring and painting—are often created at the site, and probably cost as much for a prefab as for a similar house built in the usual way. Hence, the savings of factory assembly have to come from the shell; and the bigger the shell is made, the greater the relative saving.

One of the interesting new designs is

really a double house. Introduced by W. G. Best Homes of Effingham, Ill., this "Starlyte" model has two separate sections, connected in the middle by a vestibule. One side is for cooking, eating and recreation; the other for sleeping.

In its high-priced Ridgewood luxury line, National Homes has introduced another feature that will probably attract a lot of attention. It is a kitchen squat in the middle of the house, with halls on three sides, and without any windows or doors leading to the outside. A fan with ducts does the ventilating.

The large manufacturers offer so many models nowadays that you find many different-looking homes when a prefab development is finished, even though all of the homes came off an assembly line.

schoots too- so charches and supermarkets-are now prelibricated. This school, built by National Homes in Latavette Ind., was cutionleted 21 cases after the foundation was poured

Pease Homes' "Shorewood" has clean, modern lines. Cost, with luxury extras: about \$30,000,

This design by Home Planners, Detroit, can be built with panels prefabbed by lumberyards.

Best Homes' \$30,000 "Starlyte has a wing for eating and recreation, another for sleeping.

U. S. Steel Homes, for example, takes one basic floor plan and offers many variations. One model has a wide window wall, and wide-open planning where the kitchen and dining room open to the living room. Another house with the same square footage has conventional windows, and its kitchen and dining area are closed off. You would think you were in two entirely different houses.

Prefabs used to be synonymous with

low price. Most factory-produced houses now sell for around \$10,000 or \$12,000 but you would not have much trouble finding one price-tagged at \$30,000. A Cleveland man who saw a Techbuilt house made to sell for \$20,000, souped it up with extras, and wound up paying \$60,000 for his prefabricated home

If you are looking for new ways to cut building costs, however, you can learn a bookful of valuable lessons from

Prefabbers use modern methods to get their houses up fast

STEEL JOIST FRAMING is used by Modern Homes. Joists hang on top of foundation four feet apart, and span entire width of the house, eliminating fally columns in the basement.

PLYWOOD PLOOR PANELS are often prefabricated at the factory on a framework of two-by-fours and are bolted to steel joists at the are. Users claim that floors built this way are stronger

ROOF TRUSSES supported entirely on outside walls give prefabbers wide-open interiors to work in. They lay the finished floor and erect ceilings before putting up interior partitions.

prefabbers. They're the experts, Here are some of their cost-cutting ideas that can be applied to conventional houses:

• Combined sheathing-siding. The new exterior-grade plywood with vertical grooves, known as "Texture 1-11," serves a double purpose and sharply cuts labor costs. It takes the place of sheathing, building names and siding

building paper and siding.

• Prefab flue. By placing the furnace in the center of the house, usually near the kitchen and bathroom, many prefabbers reduce the length of duct runs and hotwater supply lines. This saves material. Flues, hung from the ceiling, go up in two hours, saving about a day's wages.

• Roof trusses. First-floor ceiling and roofs are framed together at the factory to span the entire depth of a house. Outside walls carry all the weight of the ceiling and roof. There's no need for load-bearing room partitions. Trusses save lumber, speed erection time and make it possible for you to have wide open spaces inside the house.

• Inexpensive room dividers. Instead of erecting a costly, stud-wall partition between the kitchen and the dining area, many prefabbers install a bamboo curtain which runs on a track in the ceiling. This divider can be opened full-width, making both rooms look larger,

 Double-duty wiring. You will often find electrical outlets serving different rooms on opposite sides of a wall partition, At-

taching two outlets opposite each other to one stud saves wire and labor.

Many obstacles that stalled prefab manufacturing in the past have been knocked out now. In most sections of the country, the building codes now permit you to erect a factory-made home. And it is usually simple now to finance such a home with Government-backed Federal Housing Administration or Veterans Administration mortgages.

Prefabbers admit, however, that they still find it difficult to sell their houses in neighborhoods where "prefabrication" remains a naughty word. Many people remember when nearly all prefabs were square cracker boxes that looked as if

[Continued on page 264]

Baby Atom Smasher Will Go Down a Hole to Prospect for Oil

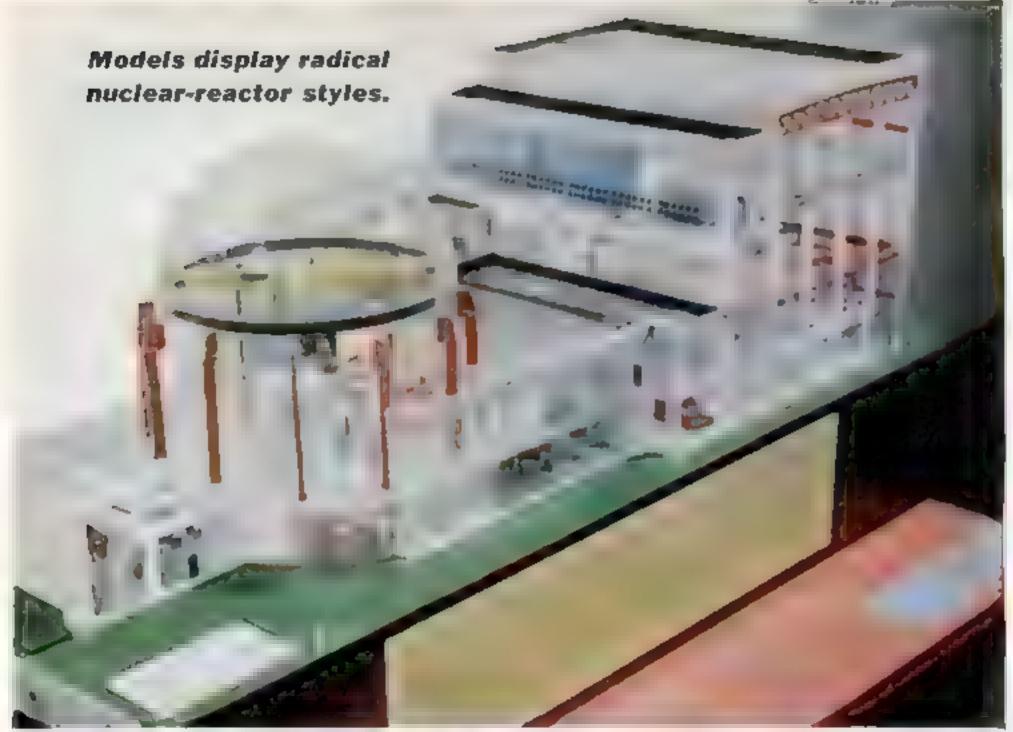

THESE engineers are comparing the world's smallest atom smasher with a standard laboratory model. The baby accelerator will be used to identify and locate oil at great depths

by producing a stream of neutrons which penetrate the earth around a well bore. The reactions that are set up by the rays will help oil men to "log" or evaluate wells.

Waste Heat from Reactors Now Air-Conditions Atomic Plant

WATER that is used to cool reactors now also warms workers at the Hanford atomic plant. Pumped to a heat exchanger, it gives up its heat to an ethylene glycol solution which transmits it to the plant buildings. GE engineers who devised the system decided on antifreeze as the transfer agent to prevent its freezing in outdoor coils (above).

"Fast breeder" A-power station will have advanced design and 100,000-kilowatt capacity.

Inside the New A-Power Plants

Liquid-fuel reactor pioneers use of thorium.

RECENTLY exhibited martels show two of the most promising of a crop of advanced new designs for atomic power plants

Due for completion in 1959 at Monrot Mich., the \$54,000,000 generating station above will house a "fast breeder" reactor that conserves atomic fuel by creating more than it consumes. A mighty midget using high-speed neutrons, it has a core or "firebox" only three feet in diameter and three feet high, but will whirl a 100,000-kilowatt generator to feed current into Detroit Edison lines.

Centered in the domed reactor building a circular chamber encloses control rods which extend downward to the reactor in its scaled underground capsule. Uranium-alloy plates enriched in

U-235 serve as fuel; more fuel is "bred" in a surrounding uranium blanket. Liquid metal carries heat from the reactor to a heat exchanger and thence to a boiler, making steam for the turbogenerator in the oblong powerhouse, Atomic Power Development Associates, Inc., a group of 33 electric, manufacturing and engineer-

ing firms, developed the plans. In the other new design, at the bottom of the opposite page, liquid fuel courses through the pear-shaped zirconium-metal core of a pilot-size Oak Ridge National Laboratory power reactor. Shown by a %-actual-size cutaway model, the six-foot globe will yield 5,000 to 10,000 kilowatts of heat energy, of which a small fraction will drive a 300-kilowatt generator in trials. Fuel (symbolized by red) is uranyl-sulfate salt enriched to 90 percent U-235 and dissolved in heavy water. The hollow space surrounding the core (green) will hold thorium oxide suspended in heavy water, and breeding will turn the thorium into fissionable U-233 fuel. Water-cooling tubes form spiral ribs in the surface of the outer stainless-steel globe.

Attractively simple in design, a liquidfuel reactor has been called "a pot, a pipe and a pump." Spent fuel is reclaimed continuously, instead of in batches. And this type may best exploit

abundant thorium for fuel.

These illustrated designs exemplify two parallel plans for U. S. atomic-power development. The Michigan project is part of a Power Demonstration Program undertaken by private industry, with Government encouragement and aid in research, since January 1955. The Oak Ridge reactor is one of five promising types being built meanwhile by the Atomic Energy Commission in the Government's own Civilian Reactor Program, begun in 1954 to advance power-reactor technology. First to produce a full-scale A-power plant will be the Government program, with completion in 1957 of another AEC project, a pressurized-water operating a 60,000-kilowatt atomic powerhouse at Shippingport, Pa. -Alden P. Armagnac.

New British Scooters **Designed for the Gals**

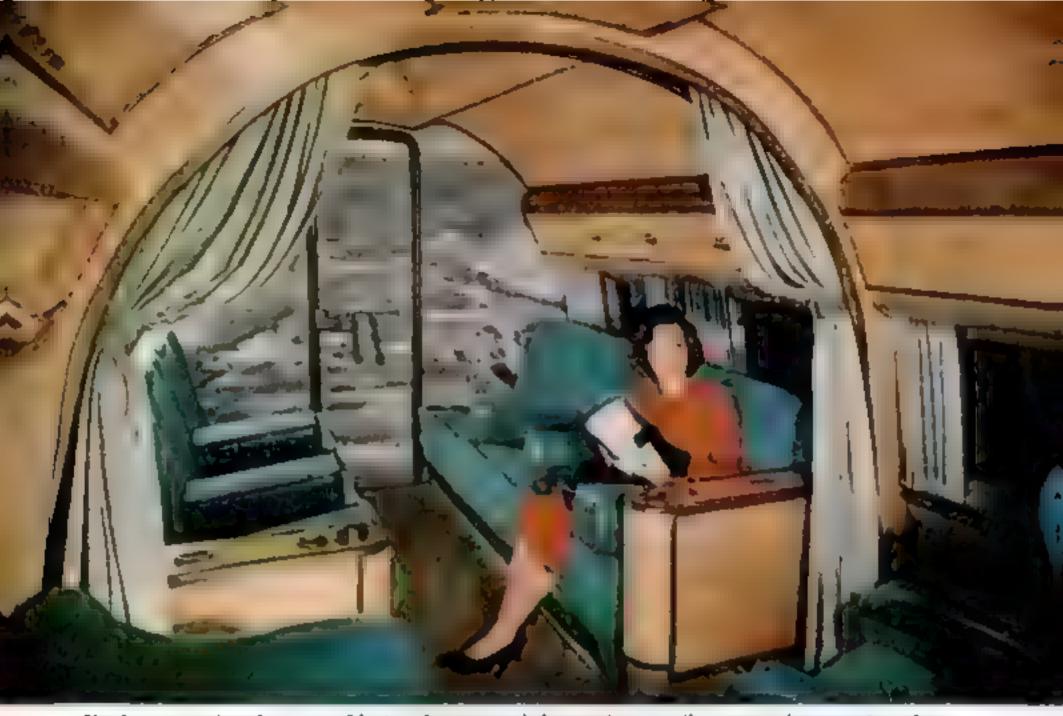

Aluminum motor powers scooter above.

This carlike model has sheet-metal body.

ESPECIALLY for the ladies, the feather-weight British scooter in the top picture uses aluminum for all the motor's castings, with hard chrome-plating for the cylinder's wearing surface. A preselector mechanism eases shifting gears, and one handle-bar twist-grip provides control. The same Birmingham maker, B.S.A. Motor Cycles, Ltd., offers another model (lower view) with 50-m.p.h. top speed and carlike features: electric starter, four-cycle engine with coil ignition, fourspeed gearbox, twin mufflers and shaft drive. The sheet-metal body flares out in front, shielding the rider from road splatter. The gas tank and the battery are concealed under the hinged dual seat.

You're not seeing the ground but a photo mural decorating an oil company's executive plane.

Plush Planes Tailored

In the plane below, V.I.P.'s can watch TV from a curved divan that turns into a berth.

Flying offices now let company bosses work on the wing amid the comforts of a private club.

FLAGS OF SO COUNTRIES adorn the nose section of the Chicago Tribune's retailored, widely traveled Convair 340. Galleys on planes like this, fitted with stoves and refrigerators, can make a mack or a banquet.

PAR FROM COMBAT missions, a former B-26 done over for a pipeline company is well equipped for comfortable conferences. Those ceiling grilles hide radio speakers. Most executive planes also have air-to-ground radio-phones. The planes may cost up to \$750,000; interior styling comes to another \$100,000 or more, depending on structural changes required.

for Business Brass

KIND of de luxe tailor shop, where company-owned airliners come for fittings and alterations and leave dressed in the height of lux-ury and fashion, lies alongside Los Angeles' International Airport.

Of the 21,500 business planes in the U.S. today—15 times as many as the scheduled airlines have—a select and svelte group has been expensively decked out by this shop, the AiResearch Aviation Service Co.

Here you see some fancy interiors that have been turned out to make his aloft more pleasant and efficient for top corporations' top brass. What you don't see are the bigger engines, nylon fuel tanks, pressurization and airconditioning gear, radar sets, automatic pilots, and powered trim tabs often included.—Wesley S. Griswold.

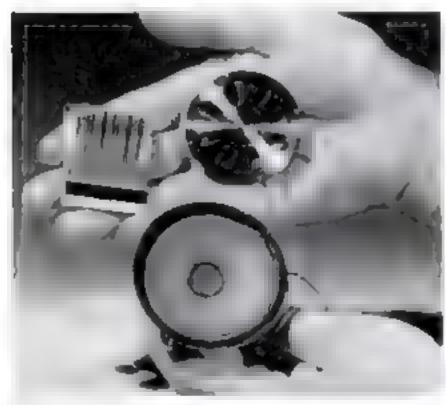

WORKING QUARTERS for a high-pressure executive aloft provide a typewriter fore and a tape recorder aft, with an easy chair that swings around smoothly from one machine to the other, as desired.

Six Jets on 1937 Chevvy Give It High Speed, Short Range

CALLED "The Thing" by its inventor, John Shelburne, a Hannibal, Mo., auto serviceman, this experimental jet car goes so fast that its speedometer can't clock it. On top are six jet

engines: twin rear take-off jets burning methyl alcohol, a big gasoline main jet, upper kerosene twins, and another alky job behind them. The odd vehicle uses a lot of fuel.

Tiniest Speaker: Half Inch Thick

BUILT for transistor pocket radios, the loudspeaker at top above is said by RCA to be the smallest ever built for commercial receivers. Its magnetic structure is housed within the shell around its vibrating cone so that it is only half an inch thick—half the size of the older midget (in foreground) which has the magnet in its housing.

Air Pressure Lights Floodlamp

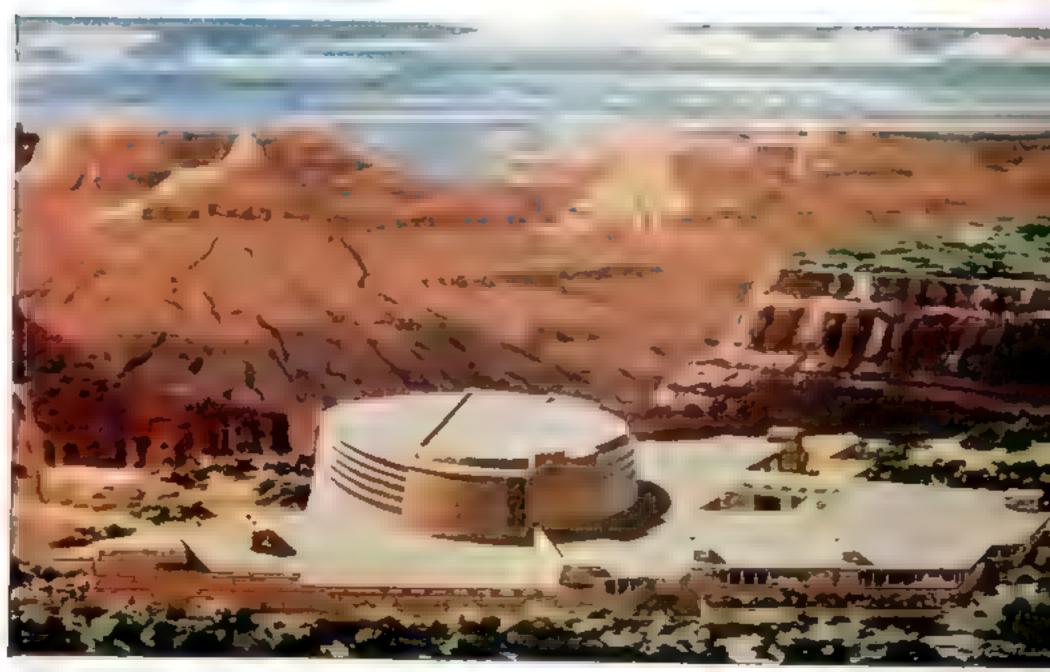

An explosion-paoor safety floodlight for use in mines and refineries gets its electricity from a built-in turbo-generator driven by compressed air. The 150-watt, 12-volt lamp draws 23 cubic feet of air per minute at pressures from 60 to 100 pounds, and is cooled by exhaust air. It will cut off automatically if the lens is shattered.

POPULAR SCIENCE

A shining tower, this 138foot water tank of stainless steel will never have to be painted, its 250,-000 gallons supplement the city supply to give fire protection to the new General Motors Technical Center north of Detroit. The coppers reflection from the exeavation below will change to blue when the 22acre lake is filled

Dedicated to all faiths, the Shrine of the Ages Chapel below will begm to rise this summer on the age-old Arizona Grand Canyon run overlooking the site where Easter summe services are now held Protes tant, Catholic and Jewish altars, operated on hydrauhe lifts, will take their places in the chancel in turn as needed

2 POPULAR SCIENCE

Copter Drops Painter to Daub Frosty "Pumpkin"

When a huge radome at Thule Air Base, Greenland, needed a paint job, the problem was how to get a rope ladder up to its chilly crown. The 55th Air Rescue Squadron solved it with a helicopter. A serviceman descended from the hovering craft and attached a ladder to the top of the fabric-covered building that houses the radar.

Pilot Wears His Movie Camera

As PLOT of a "chase plane" during test flights for experimental McDonnell jets, Zeke Huelsbeck likes to make movies of the other plane's performance exactly as he sees it. Since he is too busy to use a hand-held camera, he bolted a gun-type job to his crash helmet at eye level. The camera is operated by a remote hand control

New Cable Car Gives Striking View of Caracas

THE first car of Caracas' new \$15,-000,000 cable-car system nears a landing on 7,000-foot Mount Avila. Second longest in the world, the system connects

with two adjoining peaks and the Caribbean. The spectacular Venezuelan project includes a circular, 14-story, mountain-top hotel and an ice-skating arena.

What's Coming Next?

Aiready on the drawing boards are ideas that may remake our world of tomorrow. Here is a glimpse into the future, at some of the most striking of the innovations that a recent survey has found forward-looking scientists, architects and engineers cooking up for us in the country's laboratories and workshops.

PSM BRAWINGS BY JO KOTULA

DRIVERLESS TRAIN

RAPID-TRANSIT PLAN of Henry K. Norton, New York, Susquehama & Western R. R. president, proposes 60-m.p.b. pneumatic-tired trains without drivers, on roadlike elevated track with a central guide rail. When station agent throws lever closing doors and activating track, trainload of passengers proceeds automatically to next stop—an innovation shown feasible in a recent New Haven R. R. experiment.

MAN-CARRYING SATELLITE

NEXT SPACE-EXPLORING STEP after tiny unmanned earth satellites will be this more useful manned "satelloid," foresees Convair guided-missile expert Krafft A. Ehricke. His hybrid plane-spaceship would maintain itself for days in orbit of modest 80-mile altitude, as a 17,400-m.p.h. satellite, by intermittent rocket bursts; then glide back to earth. Tail and lower half of the forward section, rocket boosters for the winged part, are shed as shown during climb to orbit.

DREAM HOUSE

THREE-UNIT PLYWOOD STRUCTURE for vacationists, designed by San Francisco architects John Campbell and Worley Wong, is called "leisure house of tomorrow." Outdoor pavilion with sun shelf (foreground) offers sunbathing, resting in shade, swimming in pool across walk. Partly sunken, windowless "cave" with steplike seats (right background) invites gathering in evening around fireplace. Living area with kitchen and bath (left background) serves for eating, sleeping.

FLYING SUBMARINE

AT HOME IN WATER OR AIR, this combination craft would fly under power of a jet engine, and alight on water skis. With air intakes and exhaust sealed, it would then submerge and operate as a submarine, using a marine power plant and a retractable screw propeller. Armament could include two torpedoes. According to patentee Don B. Doolittle of All-American Engineering Co., Wilmington, Del., release of details has just been permitted by the Defense Department, which kept the patent of the flying sub secret for several years.

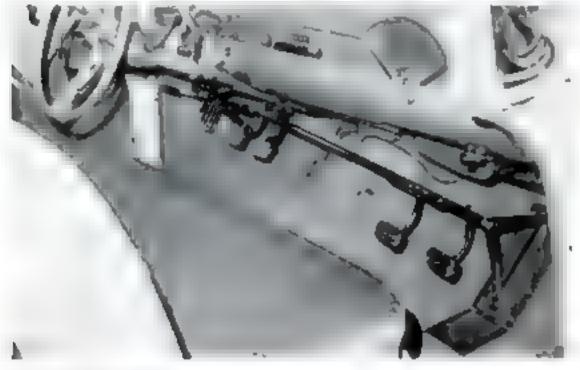

"Rip It Up" Is Motto at Heavy-Equipment School

Future road builders learn how to handle big tractors, scrapers, graders and shovels at a new school near Charlotte, N.C. Their laboratory is a tract of virgin soil which they dig into and move around in order to obtain a diploma for the four-week course.

Backed by equipment dealers and manufacturers, the National School of Heavy Equipment Operations turns out trained operators in 218 hours of work—two-thirds in the field, the rest classroom study.

Quick-Change Unit Gives Car Control To Driving Teacher

A detachable duplicatepedal mechanism now lets you put on your car, for driving lessons, the same dual controls that professional instructors have. Made by Portable Dual Controls, Inc., Detroit, for automatic or standard transmissions, the new safety device can be installed or removed in less than a minute.

FOPULAR SCIENCE

scintillation counter responds to faint radioactivity of common rocks, detects variations from average that may point to valuable minerals. This airplane-type model may also be used in car or afield. Detecting head, foreground, actuates meter on control unit in farther observer's hands.

DIAMONDS occur in kimberlite rock like specimen bearing this rough gem. Volcanic "pipes" of kimberlite are "dead" spots radioactively, and so can be spotted from air by low counter readings. Method promises discovery of new African diamond fields, and might find first of importance in U. S.

'Black Box' Points Way to Oil and Gold

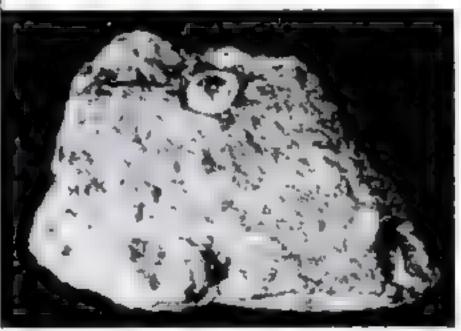

Sensitive meters read clues in rocks, to guide prospectors to the earth's mineral treasures.

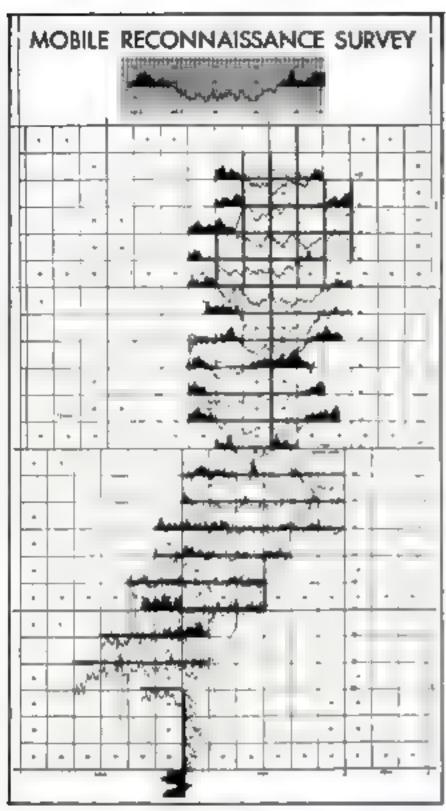

By Alden P. Armagnac

RADIOACTIVITY now guides gem hunters to diamonds, and modern forty-niners to gold. A new science called tracer prospecting offers prospectors an exciting new way to locate these and other valuable minerals—oil, iron, silver, copper and lead, among them.

Tracer prospecting takes advantage of clues in the form of minute amounts of radioactive substances in rock. Much as man-made radioactive "tracers" now tag materials in laboratory and factory, these natural radioactive tracers serve as indicators of other minerals in the earth, it has lately been discovered.

Number One tool of a tracer prospector is a high-sensitivity radiation detector—a scintillation counter or a multi-tube Geiger counter. In sensitivity, either instrument far excels the average uranium hunter's simple Geiger. Like it, the tracer prospector's counter will find uranium. But more than that, it will find other

minerals that a less sensitive instrument cannot locate at all, by a new "tracer" technique that is based on these simple principles:

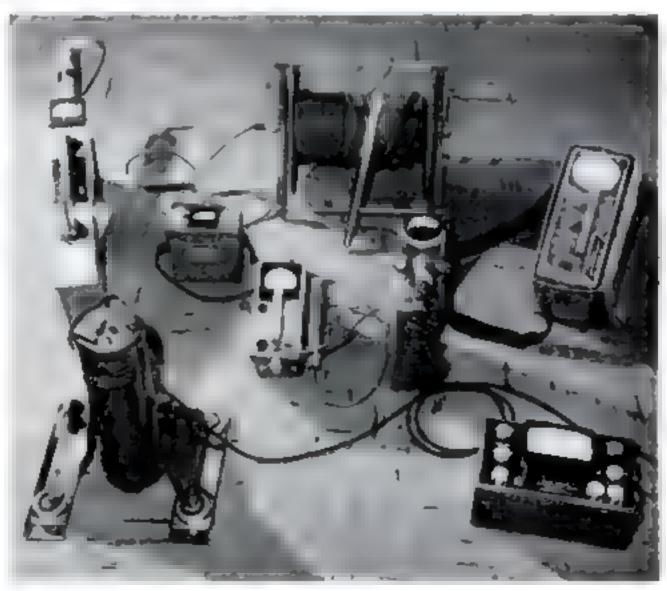

All rocks are slightly radioactive, because they contain, on the average, a few thousandths of one percent of uranium. Different kinds of rocks, however, vary from this average. Granite, which contains quartz, shows a little more radioactivity than the general run; basalt, free of quartz, a little less.

Not only is a semulation counter sensitive enough to register the trace of radioactivity in common rock, but it registers, also, any departure from the average amount. It is these variations, either upward or downward, that interest tracer prospectors.

South Africa have lately been equipping themselves with airborne scintillation counters. By aerial search with these instruments, they expect to locate hitherto undiscovered "kimberlite pipes," the funnel-shaped bodies of bluish rock, ranging up to 2,300 feet in diameter, in which diamonds are found. Volcanic in origin kimberlite rock belongs to the basalt family and so has subnormal ra-

GROUND SURVEY follows grid lines taken from actual map of area. Truck with counter makes tape recording of radioactivity along each line (sample at top), Resulting charts (highs in black) are added to map. Pattern like this indicates oil or gas in buried river bed.

TRACER PROSPECTORS
use these tools: aurborne scintillation
counter (front, left and
right); standard scintillation counter (center,
right) beside ordinary
Geiger counter (center,
left); Geiger counter
with king-size 26-inch
tube (rear, left); drillhole radioactivity probe
with 1,000-foot cable on
reel (rear, center); and
24-tube Geiger counter
(rear, right).

AIRBORNE SCINTILLATION COUNTER in helicopter's plastic nose detects radioactive "anomalies," or variations from normal, on which

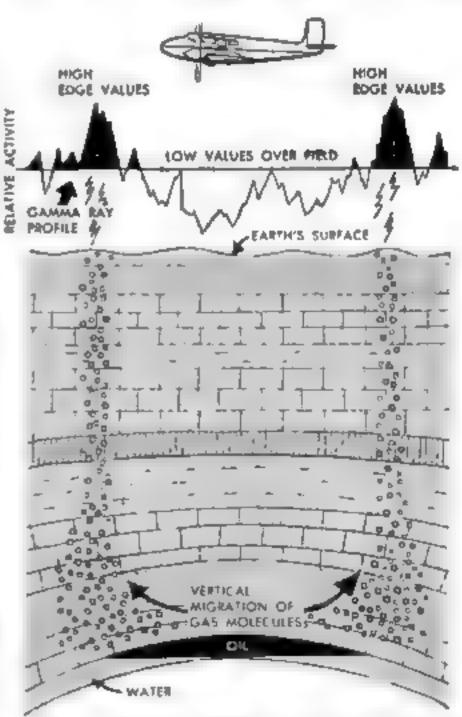

dioactivity. Wherever the aerial prospectors' instruments show a radioactivity "blackout," therefore, should be a likely place to look for the diamond-bearing rock formations.

known to exist in the United States. A few modest-sized diamonds have come from one in Arkansas, where a small-scale mine has been worked from time to time, but domestic diamonds to date have been of more scientific interest than commercial significance. Now plans are under consideration to try out the new diamond-hunting method here, and its successful application could possibly make the U. S. one of the world's important diamond-mining nations.

Finding gold by tracer prospecting has been proven feasible, in a backhand way. Quite recently, ore from African gold mines has become an important source of by-product uranium—of which a small but valuable quantity is associated with the gold in the rich Transvaal and Orange Free State deposits. This presence of uranium in gold ore, geologists say, is by no means unique to these localities.

So prospectors for gold in other re-

tracer prospecting depends. Equipment of this Bell craft, specially designed for mineral exploration, also includes a portable core drill.

\$100 Of Oil is radioactive "low" ringed by "high" (top of diagram). One suggested explanation. Impervious cap rock, overlying oil, blocks and diverts radioactive-gas molecules rising from depths to surface, as in diagram.

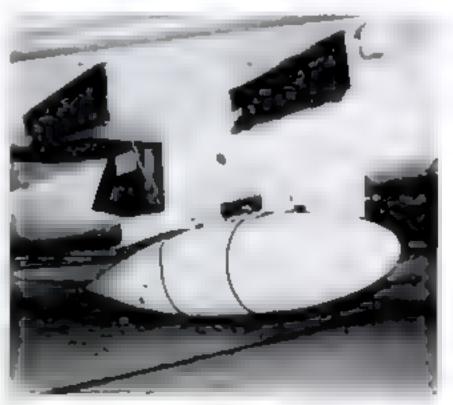

Visibility is good in the new Skanmer Amphibian. With the pusher propout of the way and the cockpit forward of the wing, the pilot

will have an imobstructed view as he sets his craft down on land or water. The threeplace, family-type airplane is made by the Colonial Aircraft Corp., Santord, Maine.

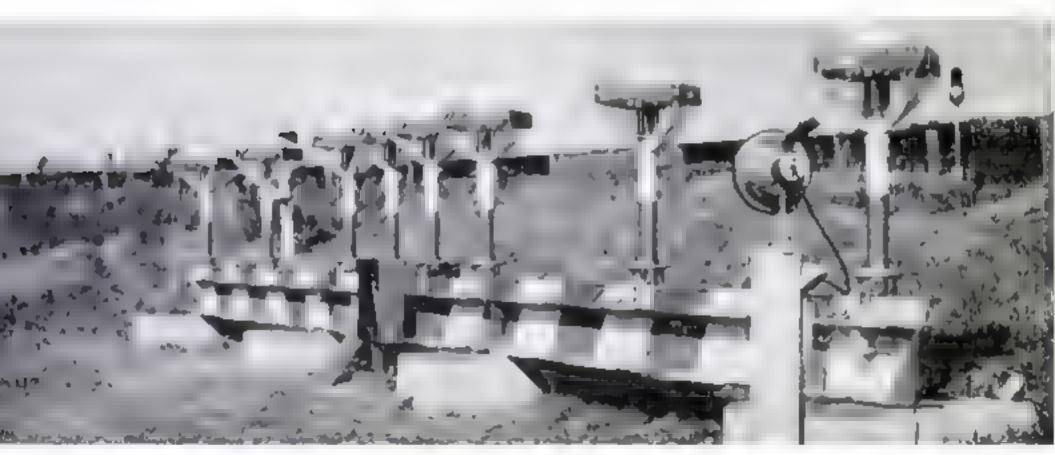

Litter patients fit sough mode the large cabin of the Army's proposed new Bell \(\lambda\text{H-40}\) utility helicopter, shown in a mock-up view above. Rotor blades of the six-place craft will be powered by a turbine that will enable it to chib as fast as World War II fighter planes.

Pod starter: The bomb like unit shown here slung under the belly of a McDonnell Demon Navy fighter contains a small gas turbine that compresses air to start the big jet engine. The five-foot-long, 450-pound pod can be used as a mobile ground-starting unit.

Plastic bags are being tried out as weather covers for the antenna arrays at instrument-landing run-

ways. If they prove successful, says the Civil Acronautics Administration, they will replace the present red-and-white shacks.

Copter spots sub, lands on same. Few arreraft of any kind have landed aboard a submarine. Among them is this Marine HRS-1 helicopter, shown as it settles down on the deck of the USS Sea Lion during recent training maneuvers off the coast of North Carolina.

FEBRUARY 1956 [2]

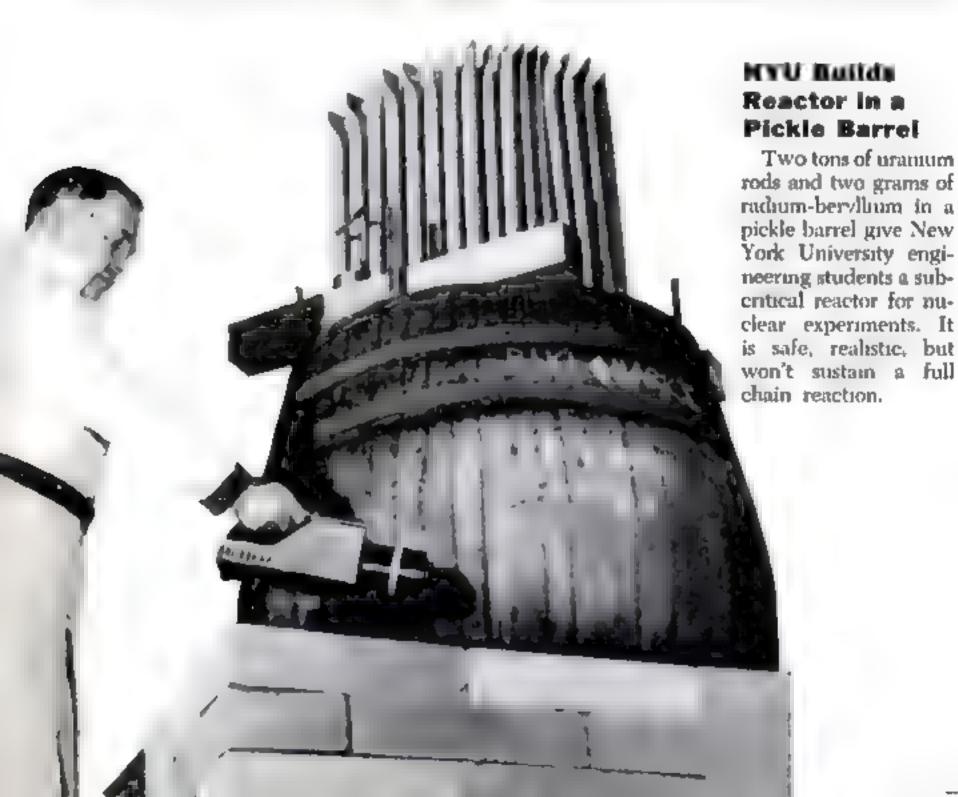

Lensless Goggles Keep Out Wind

TESTED by the Navy in 70-m.p.h. icy blasts, these goggles show that an air cushion is more effective than lenses. Soft rubber seals the edge against the face, forming a stagnant layer that keeps out the wind. The goggles were designed by Dr. G. S. Macvaugh of Chevy Chase, Md., and his son Gilbert.

K Square Is 5-in-1 Drafting Tool

Called a K square by its inventor, a New York high-school senior, this drafting tool replaces a T square, 30-60-90-degree triangle, 45-90-degree triangle, protractor and ruler. Young Lawrence Kalmis (above) adjusts a knob to control the angle of its leg and horizontal movement in a grooved slide.

Plastic Roof Proposed to Keep Dodgers Dry on New Field

RAIN checks may become obsolete at the new stadium proposed for the champion Brooklyn Dodgers. Graduate architectural students at Princeton designed this scale model with a translucent dome to keep field and fans dry, and with no posts to block vision. Half underground, the bowl would be high enough to clear home runs and most fouls.

Light-Delivery Jeep with Two-Wheel Drive Has Sliding Doors

Newest of the Willys Jeep line is this twowheel-drive Dispatcher. A low-cost (\$1,284 up) light-delivery vehicle, it will be available in three models: a steel and fiber-glass-nemforced plastic hardtop with sliding doors on recessed outside runners (above), a model with or without canvas top, and a soft-top convertible. Each is being made with left or right drive, the latter for foreign sales and rural mail delivery from the driver's side.

On the other side of the shop is a "boat-display deck."

Tar Heel's new-idea "breezeway float"

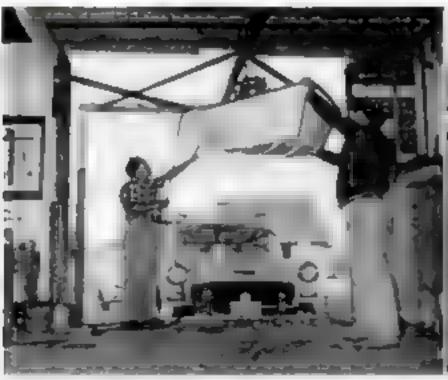

Wanted: Marinas

Parking and servicing America's growing fleet of outboards is a booming business on lakes, rivers and salt-water shorefronts.

By E. D. Fales Jr.

WITH more than 4.000,000 outboard boats now in use-and more coming-there's a tremendous, rising need not only for boat ramps and repair shops but for boat parking space.

As just one sample, the waiting list for boat moorings in the city "marina"

INSTEAD OF CHICKEN FEED this 50-foot monorail now whisks boats around in Del Wilson's shop. New, he says, it would have cost him \$1,000. He got it for \$70 at a chicken farm.

WHEN WATER LEVEL DROPS and breezeway float must be eased out into deeper water, it is "winched" out on cables that run to deep anchors. When lake rises, float is cranked back.

has storm shelter in center, shops on ends. Gas dock could be cut adrift if fire ever started.

for 4,000,000 Boats

at Mamaroneck, N. Y., is 400 boats long.

You may never have heard of a marina (most people haven't), but the boat industry says that no fewer than 10 000 are in operation today on U. S. lakes, rivers, bays. And 450 more are now being built. But—says the National Association of Engine and Boat Manufacturers—boat-

servicing facilities are already so crowded that the country could use another 10,000 marinas immediately

If hat is a marina? A few seasons back the name meant a modern small-boat harbor, with complete (and sometimes swanky) docks and service. Now practically every boatvard that has at

EVERYTHING FROM SKIFFS to 67-foot diesel yachts tie up to marma piers. This is a pier that Bill Walker built (with Mrs. Walker's help) at kilmarnock, Va. Light crane on pier is used for

hoisting outboard motors. Walker made it for a few bucks by using steel pipe cut from a gas station sign pole for the mast. Pier cost \$2,000; oil companies sometimes pay half

"BOATELS" ARE THE NEWEST THING in marinas. Del Wilson built five apartments right into his

marina at Rehoboth, Del. Man at center pulls a boat on four-foot dolly that Wilson designed

HUSKY "HIGH-BANK" RAMP was built by Bill Walker when he found that his beach was too steep for trailers. He laid oak planks between 3 -by-4" steel angles, each 30 feet long

HUGE SYSTEM OF FLOATING DOCKS, seen behind passing outboards, protects some boats on Kerr Lake Many owners pay extra for these covered dups which protect their boats from weather

least a gas pump is calling itself a marina. Some marinas aren't even on water. One in the desert at Tucson. Ariz sells and services boats for owners who have to "trail" long distances to water.

A big marina is quite an impressive operation. It must have (1) ramps or cranes or a marine railway to get boats into and out of the water, (2) several piers for boat parking, (3) a good repair shop, (4) a large stock of motors, boats, tools, paints, rope, lights and so on.

Perhaps the world's largest is being built at Newport, Calif. It will park 3,000 boats—and 4,000 cars. At Fort Lauderdale, Fla., another big marina, with 500 boat slots, has 28 shops filled with the innumerable items that boatmen buy.

Some marinas are publicly operated by city park departments, but most are privately owned. A man can turn a good profit—or lose his shirt—depending on how good a salesman he is, and how handy with tools.

At Washington, N. C., Dennis Smith-

wick needed a 14-ton crane. A new one would have cost \$1,000 or more

"But I found steel from an old highway bridge and welded two reinforced channel girders into a 24-foot boom," he told me. "Another girder became my mainmast. Total cost of all the steel parts for my crane: \$75."

At Copiague, L. I., two men bought a boatyard and at once ran into a problem: customers beefed because they couldn't get their boats out on short notice. (Some boats, naturally, are winter-stored back in the yard, behind many others.)

"We needed a big walking crane," said Stewart Strong. "That's a big expense. So we went to an auction, bought an old power-company truck for \$250. It was too old for road use, but fine for our yard. And there was \$1,000 worth of gear on it: a winch, a big electric motor and a long crane, once used for lifting power poles. Now we 'walk' boats out of any spot in the yard in minutes."

After bulldosing a marina out of a

jungle, at Kilmarnock, Va., Bill Walker needed \$1,000 for dredging (which costs

around \$1 a yard).

"To save money, I tried asking boat owners if they'd work their boats for me for an hour for \$8 or \$10," he said. "I'd anchor them in the shallow water I wanted to deepen, with the bows toward shore. Then I'd have them start the props and fishtail their boats back and forth,

"We found that, by fishtailing, a 30foot cruiser with a large propeller could
fan our sandy mud out into deep water.
We knocked two or three feet of mud
away from our dock. Our total dredging

cost about \$45."

At Rehoboth, Del., "Del" Wilson wanted an overhead monorail crane. You can buy a new one for \$1,500.

"We looked around until we found one in an abandoned chicken barn," he said.

Del also found that it took four men to move a 315-lb, cruiser around his shop. So he built a midget dolly only four feet long, cut an axle from pipe, and added two wheels taken from an old baggage porter's truck. Now one man can pull a big boat around with one finger. Further, he can load a boat on the dolly single-handed—by propping up the bow with an ordinary garage hydraulic jack.

Even an old road-scraper came in handy for Dennis Smithwick at Washington, N. C. He removed the 40-to-1 hand winch formerly used by its crew for raising the blade. Now that winch is installed over one of his boat-parking slips. When an owner comes in from a trip, he pushes a lever. A %-hp, electric motor turns the winch and lifts his boat three feet out of water. There it stays until the owner takes another trip, Result: the owner has found that instead of having to paint his boat every year, now once every three years is enough.

So many owners liked the road-scraper hoist that Smithwick bought six more from scrap yards. Now he gets an extra \$2 a month from each slip. The above-

THREE OLD BRIDGE GIRDERS went into the making of this husky crane at Dennis Smithwick's marina in Washington, N. C. He paid about \$65 for them, saved several hundred dollars.

water in Smithwick's marine. This makes annual painting and varnishing unnecessary, he says. Boats that might warp should be cradled.

[Continued on page 261]

Amateur Astronomer Builds His Own Back-Yard Palomar

IMPRESSIVE as his private observatory looks, Martin Vann is still more proud of the 16-inch telescope glimpsed above through the door as he mows the lawn behind his Los Altos, Calif., home. He built both the observatory and the telescope himself.

Vann, who works for a plumbing firm, values his star-gazing setup at \$20,000. He first assembled the high-power telescope for a closer look at the stars; then built the miniature Palomar to house his equipment, using tempered hardboard for the dome.

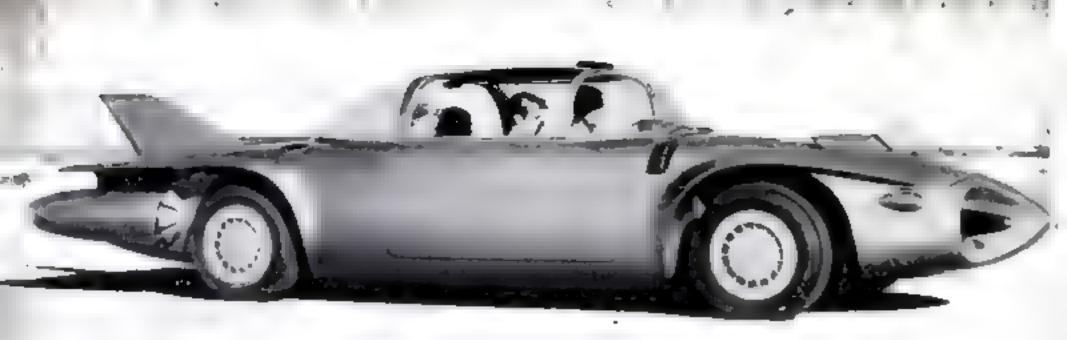

They Say Now ...

THOMAS E. MCRRAY, COMMISSIONER, ATOMIC ENERGY COMMISSION: "There is a limit to the number of large thermonuclear explosions that the human race can withstand, I propose that we... detonate a large thermonuclear weapon (at Eniwetok) before an audience representative of all the peoples of the world.... If hat they would see would leave no doubt in their minds with regard to the meaning of disaster."

Lewis L. Strauss, Chainman, Atomic Energy Commission: "If there is to be another war (it) may be survived by the country with the greatest stockpile of nuclear weapons.... But such a war will almost certainly be lost by the country with the fewest resources in trained manpower."

FRANCIS J. GRIFFIN. EDITOR. CHEMISTRY & INDUSTRY, LONDON: "When the problem of making science teaching attractive financially to men of imagination and ambition has been overcome, the need will still remain for making the best use of those the profession already has, The science teacher is the kingpin of industrial prosperity."

PROP. FARRINGTON DANIELS, UNIVERSITY OF WISCONSIN: "By a judicious combination of fossil fuels (coal, oil. gas), atomic energy and solar energy, the whole world can have within this century all the mechanical power and material comforts that it wants."

after secret highway tests, as "a progress report" on experiments toward gasturbine passenger cars. Hooked to its kerosene-burning 200-hp. engine is a

heat exchanger that uses the exhaust to warm incoming air, improving combustion and saving fuel. The car, seating four, is 19 ft, 7 in, long, 4 ft. 4 in, high at the tail. The body is titanium.

3 Cars You Can't Buy

Packard Projector
was dreamed up for
drivers who prefer
to get into and out
of a car without
bumping their heads.
Roof panels retract
when the doors open,
and seats swivel outward. Headlights are
recessed behind
push-button lids. In
the rear are four exhaust ports, to cut
back pressure.

Mercury Turnpike Cruiser also offers no-stoop entry: Transparent panels flap up when you open the doors. Skinny roof posts and compound-curved glass "permit full enjoyment of the wide new vistas opened to tumpike travelers." The car's own tumpike travel, between auto shows, will be in a glass-sided trailer.

NICKNAMED "TORNADO TOWN," thus is the heart of the 250-million-dollar Arnold Engineering Development Center. The Propulsion Wind Tunnel is at left center. At left rear is the Gas Dynamics' Facility, where models will be tested at 10 times the speed of sound.

Biggest electric fans whip up

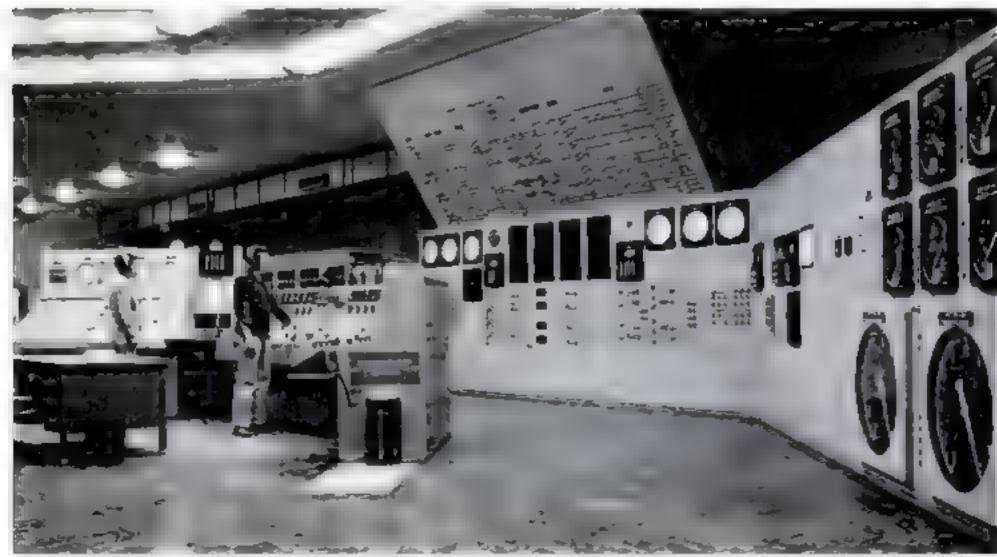

Air for Tomorrow's Airplanes By Henry B. Comstock

YOUR future and mine may depend on a 250-million-dollar atmosphere factory just being put into production in the middle of 44,000 acres of barrenlands near Tullahoma, Tenn.

This weird assembly of vacuum spheres,

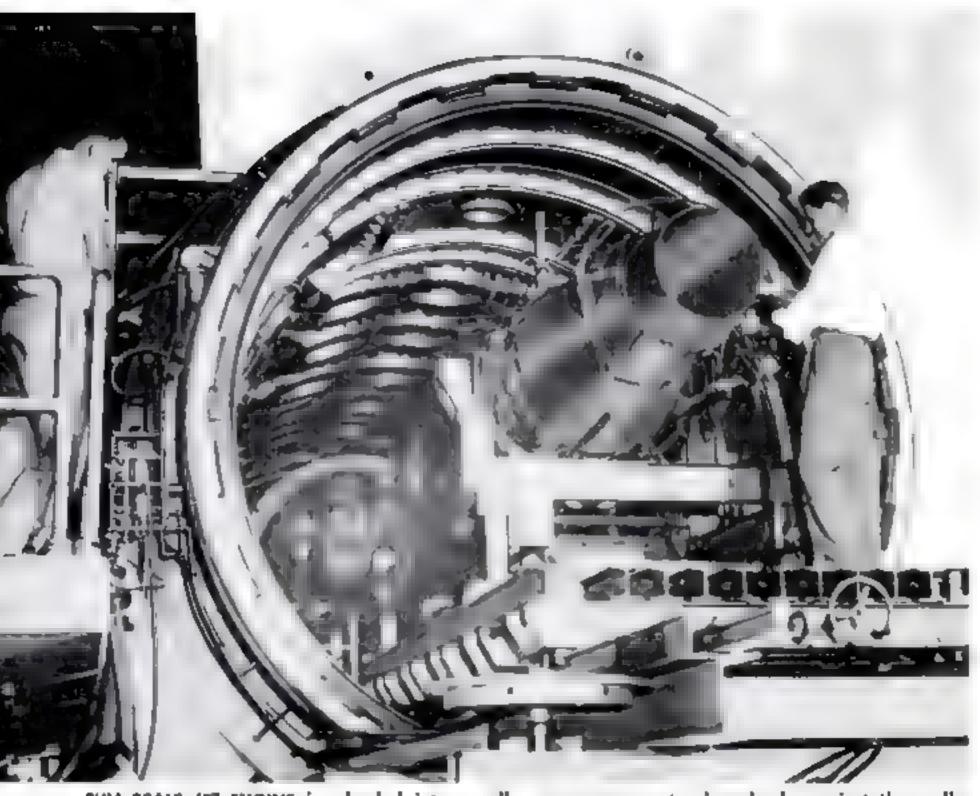

high-pressure bottles and steel tubessome of them as big around as a fourtrack railroad tunnel—is the Arnold Engineering Development Center.

AEDC—as this pipe-dream-come-true is known to its owners, the U. S. Air

MAIN CONTROL STATION for the Engine Test Facility sets up routes for air being fed to

wind tunnels. Velocity, density, temperature and humidity are all made to order here.

FULL-SCALE JET ENGINE is wheeled into a cell for testing. Recently a turbojet threw its entire

compressor rotor harmlessly against the walls. Result: the life of one test pilot was saved.

Force—is the world's most powerful and versatile wind-tunnel station. Soon it will be whipping up air in more ways than they serve potatoes in France.

Here's one typical AEDC testing menu:

 Air traveling at 7,600 miles per hour, or 10 times the speed of sound.

 Air heated to 1,500° Fahrenheit—hot enough to braise a steak in less than a

second.

 Air compressed to a fourth the density of water.

If that sounds like a rugged diet, it's meant to be. Because the technicians at AEDC are out to blend air velocities, air temperatures and air densities into every kind of torturing atmosphere that may be poured down the throats of tomorrow's supersonic engines, split by the airfoil sections of tomorrow's fighter

planes, or shock-waved from the heads of tomorrow's hypersonic missiles.

Theory into weapons. AEDC is named for the late General Henry H. Arnold, chief of the U. S. Army Air Forces in World War II. What he proposed, in 1944, was not just another research laboratory, but a high-speed processing plant that could take the best products of research and turn them into refined and proven aerial weapons in weeks and months, instead of months and years.

"For postwar air supremacy," said "Hap" Arnold, "we must buy time at any cost. The place to buy that time is in the development stage."

At AEDC they're already beginning to do the job, fast and thoroughly.

Let's say that you have just built a

ADJUSTABLE JACKS shape flat steel plates to form a nozzle contour which, combined with

the quantity of air being fed through it, sets up the desired wind velocity in the test cell.

DIFFERENCES IN AIR TEMPERATURE make it possible to see the shock waves at the head of a missile under test. Walls lining the cell are

perforated to prevent the waves from rebounding against the rocket, creating an air drag that would not exist in actual free flight.

pilot model of a brand-new jet engine. You have convinced the Air Force that you have a potentially hot item—powerful enough, perhaps, to send an attack plane streaking on its mission at twice the speed of sound.

A date with AEDC. You won't be able to trot right down to Tullahoma and give your product an invigorating whiff of 1,500-mile-per-hour air. But as soon as AEDC's present backlog of turbojets, turboprops and ramjets has been fried and frozen, glutted and starved, drowned in humidity and parched, you'll get a

date to set up your engine on a test cart at the Center. There, in a walled-off shop, away from the prying eyes of your competitors, skilled technicians will fasten fancy respiratory gimmicks on your precious chunk of steel.

When it comes "tunnel time," the cart will trundle your engine into a steel cell 12 feet in diameter and from 32 to 90 feet long. A seal will be set up between the intake section and the tailpipe to record the power plant's "bite," or thrust.

Then, while the engine bursts into its full-throated roar, air dispatchers in an

elevated blockhouse will begin pouring on the atmosphere. A touch of a single switch may flip as many as 400 six-contact relays. Lights will dance in an orderly pattern on an overhead panel that looks like the track-layout board at Grand Central Station. The route is clear for the howling tornado set up by a bank of compressors powered by electric motors totaling 20,000 horsepower. Skillfully balancing their output, a 40,000-horsepower battery of evacuators (compressors in reverse) will draw away the gases that streak from the engine's tailpipe.

Air—jast, cold and thin. Suppose your engine passes every level-flight test with flying colors. It gobbles up the tunnel's highest air velocity—bellows its defiance when the temperature drops to minus 120° Fahrenheit—gets a good bite on the lean stuff you'd find 15 miles above the earth.

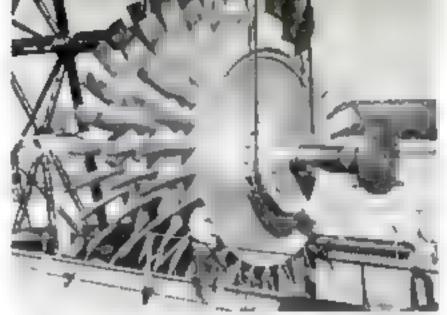

That still doesn't show how it would behave if you put it into a dizzy power climb or a screaming dive. If you could only tilt the engine—but you can't. There isn't enough room in the cell.

AEDG is way ahead of you. A flip of a switch and the nozzle that jets air into the cell slowly changes its line of attack. In effect, the engine is tilting now, By directing the air flow upward, then blasting it horizontally, and finally, deflecting it downward, every condition from take-off to landing will be faithfully reproduced.

While your engine is in the cell, you can watch its performance from moment to moment on a TV screen. At the same time, your engineers and those at AEDC will be taking instrument readings and feeding them into a 19,000-pound electronic brain—one of three at the Center. There, 2,700 vacuum tubes will work up a fever, relieved by enough air-conditioning apparatus to cool a small theater, while they blend this raw data into useful information.

TV for the boys at home. In 30 seconds the big computer will type out answers to problems that would keep a

will bend the flow of supersonic air around a right-angle elbow in Propulsion Wind Tunnel.

Water "Tunnel" Checks Behavior of Weapons at 100 Knots

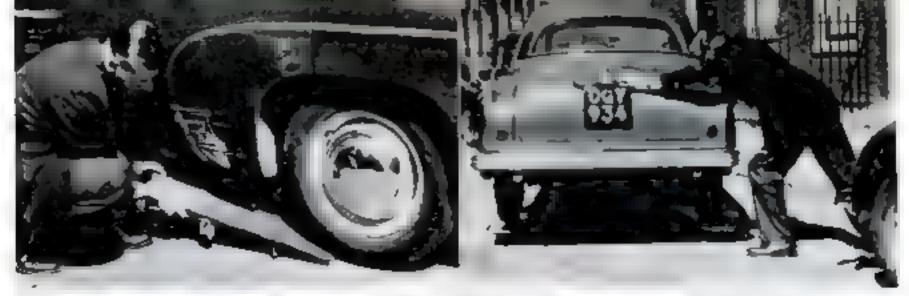

WHIPPED at high speed through a milhongallon circular tank of water, missile models underslung on this 122-foot beam are studied to see how different shapes behave when launched into water from the air. British Admiralty experts conduct hydrodynamic research at Teddington in the same way that aerodynamic tests are made in wind tunnels.

New Solid Fuel Can Be Handled Like a Liquid

Fit in coke—so called because, suspended in a
stream of air and oil vapor,
it can be poured like a
liquid—is now being used
commercially for the first
time. Public Service of
New Jersey has substituted
it for oil at a big generating station. The new fuel,
which looks like black sand,
is shown here being poured
into a hopper-bottom railroad car at a Billings,
Mont., Esso refinery.

Tarry residues from gasoline refining are used to make the fluid coke. Esso men say that the process also enables them to extract an extra 10 percent of gasoline from a barrel of crude oil.

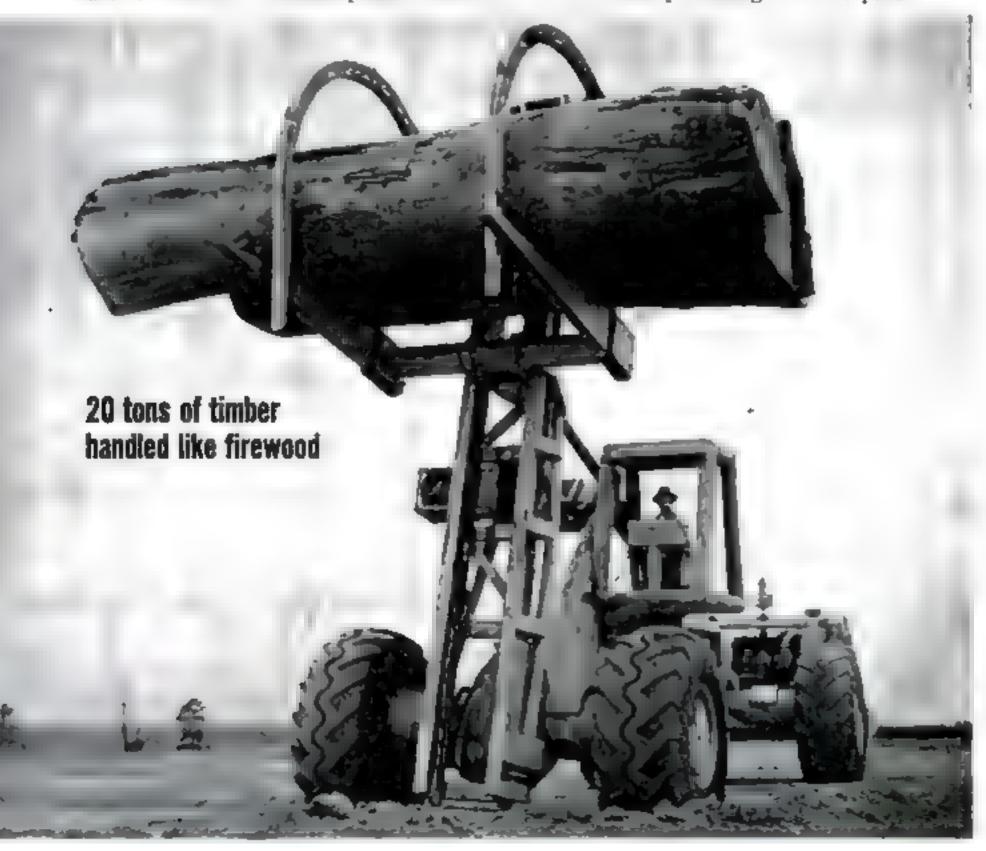

Un-Parking Gadget to Get You Out of Tight Curb Squeeze

Charles Ryan and Co., Ltd., London, say that they have just the gadget to un-park your jammed-in car: two 2½-foot steel platforms on ball-bearing casters. You put one under each rear wheel, drive up on them, get out—and push. With clearance forward, why couldn't you wiggle out yourself? Ryan doesn't say. Power steering, anyone?

Giant Electric Stacker Picks Up Logs by the Truckload

CAPABLE of lifting an entire truckload of logs with each bite, this Texas-built electric log stacker makes quick work of loading and unloading. The operator of the big rubber-tired LeTourneau machine pushes its 10-foot

wedges under the logs, clamps them in its jaws, lifts them on the upright I-beam rails, trundles them off, and stacks the whole mass of logs neatly on a logging-camp truck or lumber-mill processing or stock pile.

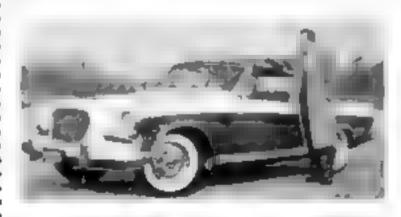

New Corvette Challenges Thunderbird and Hawk

Three snappy products of the sports-car designers are off and running with fresh packages of power under their hoods—and cockpit gadgetry galore.

By Ken W. Purdy

more money than anybody else has earned since the first man sold a stone spear for a dozen clamshells, but all this economic muscle hasn't prevented the Ford Thunderbird from knocking the ears off Chevrolet's rival car, the Corvette

The Corvette, if the sordid truth were faced, was nobody's dream car. It was a dumpy, lumpy-looking wagon, strictly non-sexy from the tea-strainer headlight covers to the dual pipes with their unhappy tendency to stain the early fiber-glass bodies. With the flathead six-cylin-

THE AUTHOR: Ken Purdy, shown with the Studebaker Golden Hawk in South Bend before his trial spin in this new U.S. sports car, is a well-known writer on automobiles. He is the author of two books about cars, Kings of the Road and Bright Wheels Rolling, and is a former editor of True and Argosy magazines.

der engine it wouldn't really go, and even wearing the alternative eight-cylinder 195-horsepower version, it was no competition sensation.

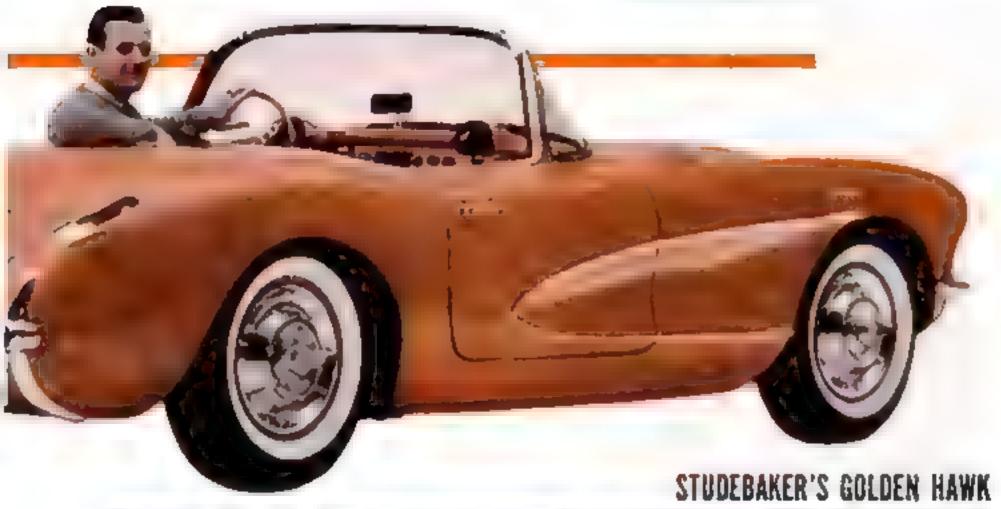

There were a trifling few other things wrong with it, too. When you bought a Corvette, you bought an automatic transmission, like it or not, and a good many citizens didn't. The top required the usual two men and a crowbar to erect, and in a rainstorm water came through all the places you could see and some that you couldn't.

Out with the old. So the Corvette didn't catch on and production trickled down to a few cars a day, ending altogether in December. What now? A new Corvette, and a horse of quite another color, even literally: You don't have to settle for Polo White or Pennant Blue any more; you can choose among a half-dozen colors, with harmonizing interiors. But there's more than a new paint job.

Styling changes in the '56 Corvette are slight, but they have improved the look

FORD'S THUNDERBIRD

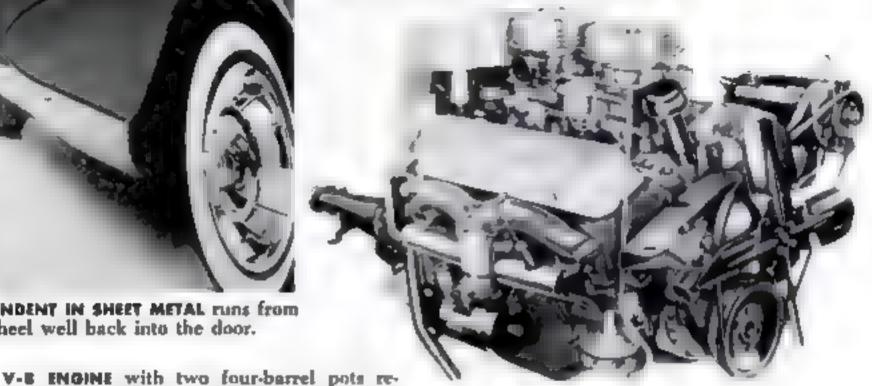

of the car enormously. (It's still fiberglass, of course.) The bashful-looking headlamps faired into the front wings are no more. They've been replaced by the standard, aggressive lights more nearly

like the rest of the Chevrolet line. The engine-compartment lid has a pair of molded contour lines running straight back, probably strictly non-functional, although they might create enough turbu-

DEEP INDENT IN SHEET METAL runs from the wheel well back into the door.

Details on Corvette show marked changes in style and power

lence to louse up the flight pattern of a large June bug, at that.

places last year's somewhat reluctant six.

The biggest body change is on the side of the car, an indented airfoil form running from the wheel arch into the door. The old Corvette looked like a dish of vanilla ice cream under a sun lamp; this one has the doing-60-standing-still appearance that motorcycle cops find so compellingly attractive.

Automatic top. It's good inside, too. There are wind-up windows and an automatic top. It folds out of sight under the same lid that hid the old one; but when you push the button on the '56, the lid rises silently, the top comes out and spreads itself, and you're in business. It's alleged to be watertight, too. Or you can have a hardtop if you'd rather.

The steering wheel is the big tip-off: testimony to GM's new-found interest in competition and its determination to take no more guff from T-bird drivers. It's the kind of wheel that costs about 60 bucks to buy off the peg: three flat, drilled-out steel spokes, a leather-covered rim, strictly Grand Prix with a touch of luxury. The spindly gear-selector level of yesteryear is gone, too, replaced by a stiff and stubby handle governing a brandnew close-ratio manual box. In case you've forgotten how to run a stick shift, the four gear positions are embossed in a metal plate on the floor.

Horsepower is up to 225 and Chevrolet engineers are willing to be quoted as saying that it may increase further. Since nobody at General Motors from the elevator operators up ever says anything just to hear himself talk, this means that another 25 or 50 horses are in the stable waiting for somebody in Dearborn to raise the ante. This is a 265-inch engine, running at 9.25:1 compression with two four-barrel carburetors, solid lifters, a modified inlet and exhaust system and a hot camshaft. Only a prototype was available when I was in Detroit, so I didn't drive the car, but obviously it will be quick, and it should come as near as no matter to 120 miles an hour.

For police cars and Corvettes. No basic changes have been made in the Corvette chassis except for some minor diddling with the front end. It's still the box-girder X-braced frame carrying the front stabilizer bar that Chevrolet uses only on its police cars and Corvettes. Chevrolet engineers were satisfied with the handling qualities of the car as it was, and so apparently were most of the customers, although there were some notable dissenters from that opinion among the competition-minded sports-car crowd.

Incidentally, Chevrolet executives say that careful vote-taking among Corvette owners dictated all the changes that were made, and that the customers have been

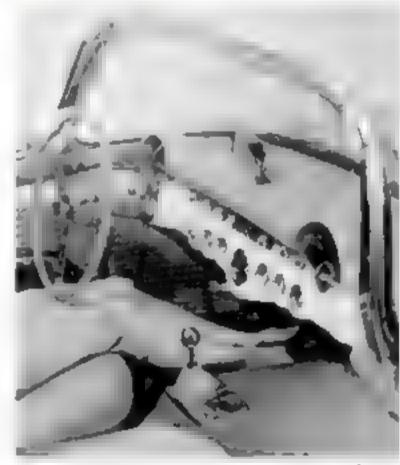

SIMULATED AIR SCOOPS adorn the front fenders. The wheel covers have make-believe knockoff hubs.

STANDARD-TYPE HEADLIGHTS groom the front of the Corvette. Six body colors are offered for '56.

given everything that they asked for with one exception: the bumpers. More drivers than not disliked them on the old Corvette, but the designers haven't changed them in the '56 except to beef them up a bit in front. Esthetically they are right, since the bumpers do flow nicely into the lines of the automobile, even if they don't afford as much protection as those on a Mack truck.

Ready for the races. This is a goodlooking motorcar, certainly it's a comfortable and convenient fast touring car. and it is probably much more than that. It doesn't take a major prophet to suggest that the Corvette will be showing up in competition next summer. Before plans for the car were frozen, Chevrolet designers had initiated conferences with Sports Car Club of America officials, to be sure that the car met SCCA competition regulations. This is a far cry indeed from GM's attitude of a half-dozen years ago, when racer Briggs Cunningham's request for help in setting up his Le Mans/Cadillac was answered by a form letter suggesting that he drop in and see what was on the floor at the New York dealership. The dope is that wellstaffed Corvettes will run this year at Sebring and Le Mans.

In terms of competition, Chevrolet is thinking about Ford, as certainly the

SHIFT LEVER ON FLOOR connects directly to the transmission housing. Better linkage supplies faster and more positive shifts.

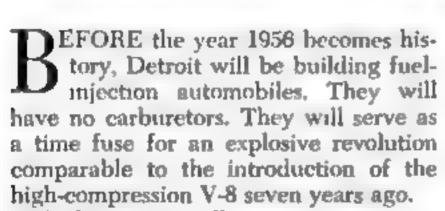

BUMPERS ARE BEEFED UP but the grille remains unchanged. The car is an inch longer overall.

By Devon Francis

fuel-injection system. Fuel enters it under pressure of 17 pounds per square inch, created by a secondary, electrically driven pump. It is ejected to cylinders at 100 to 300 pounds' pressure, depending on volume of flow, through ring of outlets. Upright cylinder controls the fuel volume.

Fuel injection will:

 Boost full-throttle horsepower output by 10 percent on current engine designs.
 When engines are redesigned specifically for fuel injection, horsepowers will climb as much as 25 percent without an increase in piston displacement.

 Increase gas mileage by five to 15 percent. That's as much as three miles per

gallon.

 Spark a change in automobile styling that could drop hood lines by several inches, with an accompanying increase m visibility through the windshield.

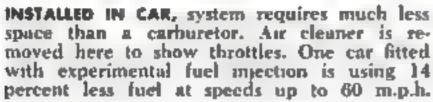

Fuel injection may be offered on some 1956 cars. More probably, it will come on 1957 models, out next fall. It's likely, in the beginning, to be an extra-cost option. The price should be in the neighborhood of that for power steering—maybe around \$100.

Eventually the carburetor as an engine accessory will disappear. Fuel injection is that good. I know. I've driven

a car equipped with it.

Silk-smooth. It whizzed away from a stop light, Unlike a carburetor car, this one had no "flat spots" in accelerating. It responded instantly to the gas pedal. Snubbed down by the brake to five miles an hour in high gear, it was silk-smooth, and this with a standard three-speed transmission. I got no back talk, no shud-

sole RECIPROCATING PART of injection pump is this plunger, which is a combination rotary valve, pump, and fuel distributor. Cam and roller shuttle it horizontally to pump, and to open or close some ports. Sleeve meters fuel.

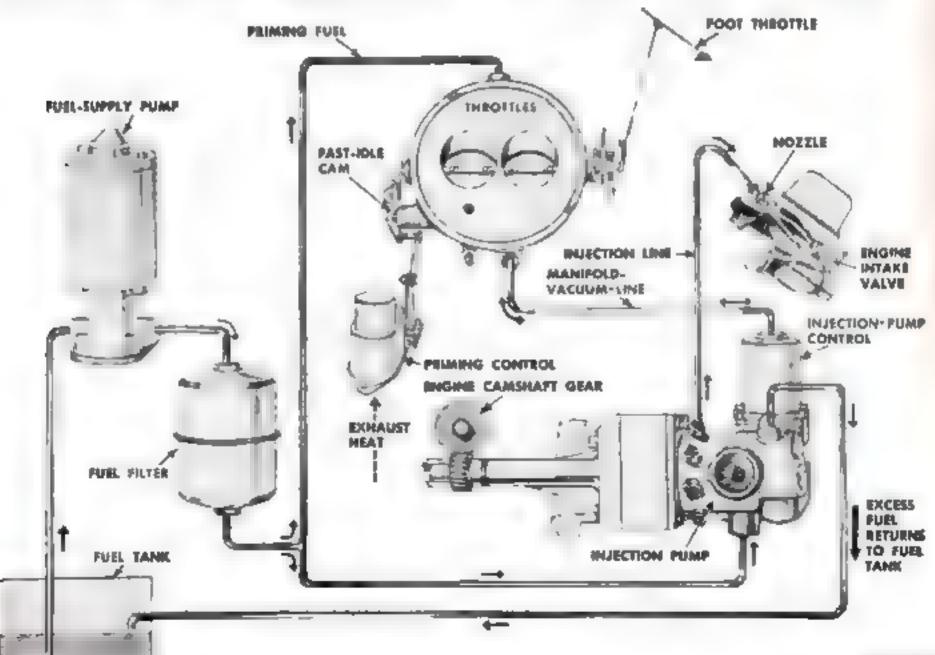

der, no bucking. At idle, the engine was so free of vibration that I had to tap the accelerator to see whether it was turning over.

This was an experimental car of popular make, owned by the American Bosch Division of the American Bosch Arma Corp. Bosch prefers that the car's brand name be withheld for the present —negotiations for wide sales of its fuel-injection system are under way in Detroit.

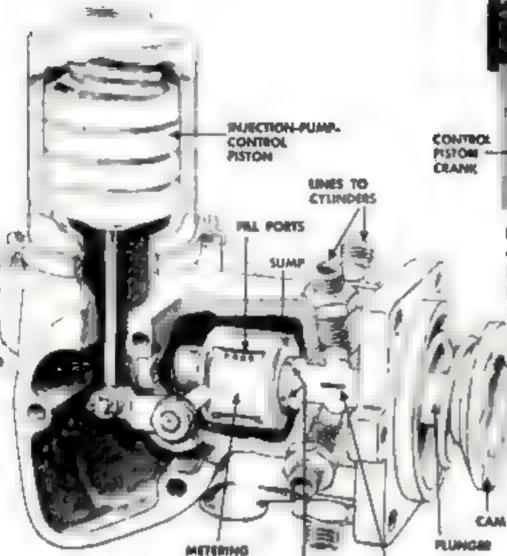

Fuel mjection, at long last, will lay the ghost of the carburetor bugaboo that has plagued the gasoline engine since

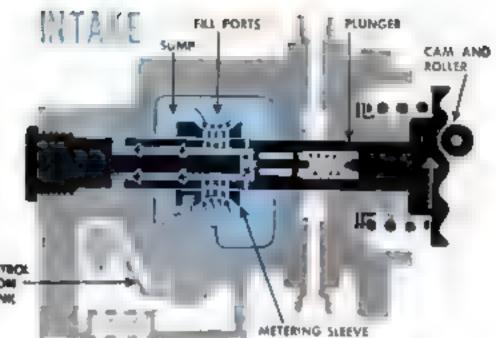

Fuel-injection system has seven main parts

FUILING CYCLE starts at throttles, which admit air to intake manifold Manifold vacuum governs injection-pump control. Fuel-supply pump feeds gas to injection pump through filter. Nozzies feed cylinders. Perming control supplies extra gas to manifold for cold-engine starts.

Injection pump has three-phase operation

cutaway of insection pump shows spring-loaded piston in "control," which responds to vacuum level in manifold, representing volume of air being delivered to cylinders. Through crank, piston moves sleeve on plunger to meter fuel and discard excess. For operation, see panel of drawings at top.

Tiny atomizers deliver cloud of fuel to each cylinder

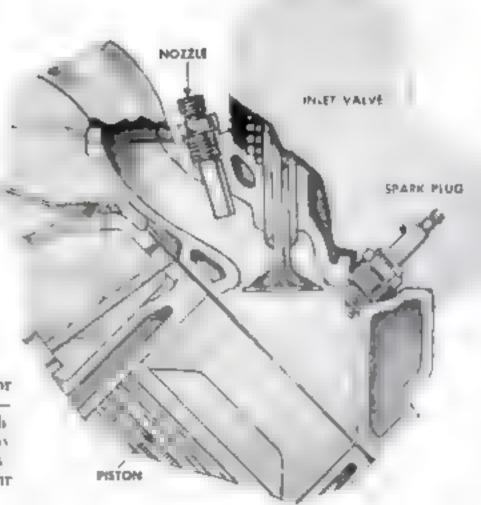

DISTRIBUTING

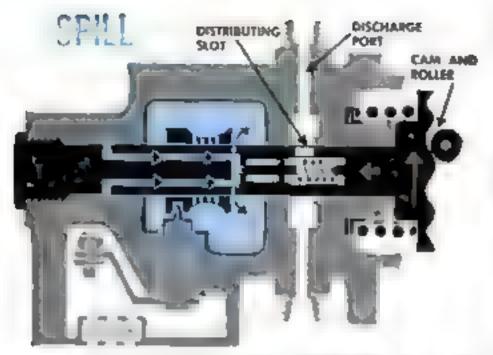

SLEEVE

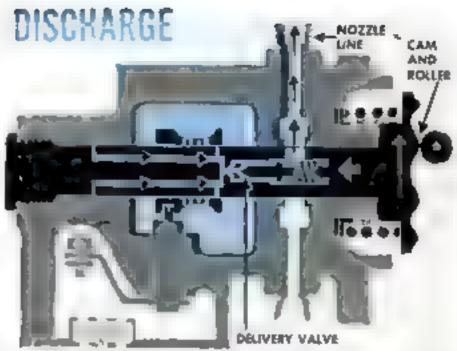

SPILL PORTS

inserted behind intake valve (right), injector valve—of simple, outward-opening poppet type—yields at pressure of 70 pounds per square inch. Atomization of any quantity of fuel is assured by nozzle design, Having no guides, the valve "floats in its assembly and is self-aligning. Incoming air and atomizing fuel serve to keep it cool.

... fill ports close, and distributing slot registers with one of the discharge ports to the nozzle line. Pumping stroke now starts, and excess fuel trapped in plunger is forced out through spill ports into sump. As cam . . .

... introduces third phase, sleeve covers spill ports and remaining fuel is forced through delivery valve out through distributing slot to nozzle line feeding cylinder. End of stroke completes injection. Cycle repeats for next outlet.

its invention. The basic difference in its design is that it separates two functions of the carburetor. A carburetor delivers air to an engine. It also delivers fuel vapor. It mixes the two and pipes them to the cylinders through the intake manifold.

A fuel-injection system delivers only air through the intake manifold and, separately, sprays fuel into the cylinders. Of all the components of an engine, the carburetor, where fuel and air are mixed, has been the zaniest part with which designers have had to cope.

Carburetion is always a compromise, even with the newest of the four-barrel jobs that try to accommodate the fuel-air intake to engine speed and load. It causes a fuel-wasting, excessively high idling speed. Vibration is inevitable in most engines if satisfactory performance at cruising speeds is to be obtained. And at top speed, cylinder starvation results.

Manifold limitations. The different cylinders in a carburetor engine never run at the same temperature. That's because fuel is never distributed to them in precisely the same amounts. The manifold system is too clumsy at metering it. At high engine speeds, the cylinders cry vainly for air. That's because the intake manifold must be just so big, and no bigger. If it's too big, the air moves too

slowly and the gas vapor condenses at low speeds.

Carburetors require heat to vaporize the fuel before delivery to the cylinders. Heated air expands, That means that a lesser weight of it reaches the cylinders. So all sorts of dodges are used to maintain combustion, or "thermal," efficiency. These include ever-higher compression ratios, trick-shape cylinder heads and leaded fuels.

The carburetor has all these faults, plus a tendency to ice up. And it's the carburetion system that causes vapor lock.

Fuel injection automatically obviates all this.

Abundant air, metered fuel. In a fuel-injection engine, the air comes from one source, the fuel from another. They are mixed inside, or just as they enter, the engine cylinders. The air is supplied in abundance. It's cool. It's dense. The fuel is metered in exact amounts, right down to a fraction of a cubic millimeter. 'Every cylinder gets a like amount.

With fuel injection, horsepower and gas economy go up because an engine extracts more zing from the fuel fed to it.

A car is peppier at take-off because better "breathing" shaves 500 to 1,000 revolutions off the r.p.m. at which the engine reaches its maximum torque, and

Scale drawings give you dimensions, and tables cover the chassis, engines and transmissions of the new U.S. cars.

W HETHER it's the headroom in a Buick, the fuel requirement of a Studebaker Commander, or the radiator capacity of a Rambler that interests you, the detachable 16-page section that follows will give you the answers. These pages list detailed specifications and dimensions for 1956 U.S. passenger cars, prepared from data provided by the makers themselves.

Drawn to an identical scale (1 inch to 3% feet), the two-view drawings of 20 cars are marked with 22 of the most useful physical measurements of a car. But you can readily obtain other dimensions besides those that are lettered in Simply measure off any dimension (in the plane of the view) that you wish, using a ruler, a pair of dividers, or simply two tick marks on a scrap of paper. Then lay the measurement against the scale that is printed across the center of each page of drawings and read off the actual dimension.

Some notes on the tabular data:

- Prices are suggested factory retail prices, including Federal excise taxes but without state or local ones, for a fourdoor sedan with standard equipment.
- Basic transmissions listed are those so designated by the maker, even in cases where the majority of cars built in that
- particular series may be fitted with an extra-cost transmission.
- Weights listed are for four-door sedans, with standard equipment but without a supply of gasoline or water.
- Turning circles of different diameters to the right and left are averaged.

THE NEXT 16 PAGES can be detached as shown, carned in your pocket, or filed for future reference. They have been attached to the magazine

in a novel way to make this easy. You will find them jampacked with figures that you can cite when discussing cars with your friends.

Francis W. Davis, Inventor

"The Father of Power Steering"—that's what the Smithsonian Institution calls him—is shown at his roll-top desk in Waltham, Mass. A working model of a vocuum pump he built at 16 is beside him.

Mr. Power Steering's Ship Comes In

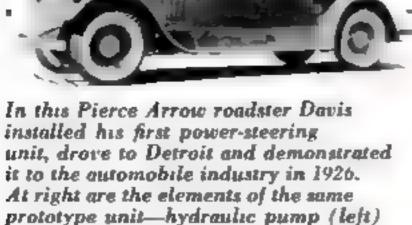

But he waited 25 years for royalties on the invention he demonstrated on a Pierce Arrow.

By Hartley E. Howe

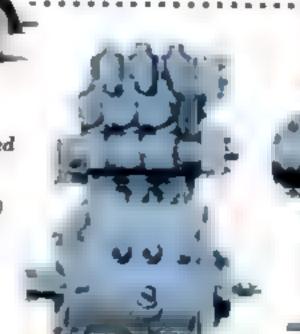

HIS year, Detroit figures, better than one in four new cars will be sold with power steering-more than 2,000,000 units.

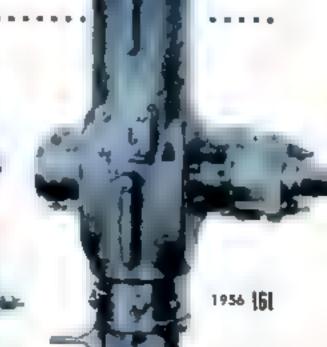

That's a remarkable record for an accessory that did not hit the market until 1951.

Sounds like a good way to rake in money, you think? Well, power steering's father waited for 25 years, with rake in hand, before the royalties even began to flow. His history is instructive for inventors everywhere who expect the golden

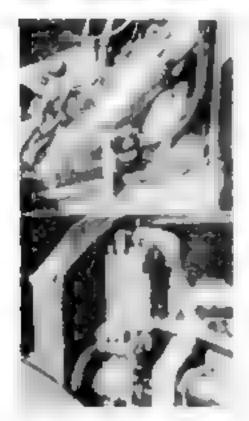

and steering gear—recently placed on display in Washington's Smithsonian.

Power Steering: the Pioneer Unit

Original hydraulic steering genr (upper photo) and its large engine-driven pump are shown in Davis' Pierce Arrow.

Idea Factory

Inventor (right) and assistant, outside shop where they have worked since 1922.

shower to begin the moment that a patent application is filed.

Power steering was ready to go in 1926. This was a quarter-century before its first passenger-car sale. Today Francis W. Davis, the tall Yankee who invented power steering, can afford to be philosophical about that quarter-century of disappointments and frustrations. Currently, more than half of the power-steering units manufactured are licensed by him. But philosophy was about all he had to nourish his hopes in the long years during which his patents aged fruitlessly.

Davis was confident in 1926, when he set out for Detroit in his Pierce Arrow roadster from his home in Waltham, Mass. Beside him was George Jessup, a highly skilled designer and toolmaker who had turned Davis' idea into precisely fitted metal. Under the Pierce's hood was an exciting new power-steering mechanism. Ahead was a market, ready to be captured.

Davis was not unknown in Detroit. He had gone to work for Pierce Arrow after being graduated from Harvard in 1910, and had risen to chief development engineer. He was highly regarded in the Motor City. In 1926 he was an independent consultant, a man who knew the ropes.

His invention, moreover, was no baling-wire lashup. It used hydraulic pressure, something that had interested Davis ever since he had investigated a truck lift invented by a struggling mechanic named Gar Wood. The heart of his steering mechanism, covered by one of his two pending patents, was an "open center" valve. Whenever the driver turned his steering wheel, the valve diverted pressure against a piston that moved the front wheels.

His other patent application covered a way to prevent

oversteering. When the driver turned the wheel, he had first to overcome the resistance of a little spring before the valve could move. Today, this spring is what differentiates "when needed" from "full time" power steering.

In a whirlwind tour of the auto companies, Davis and Jessup saw 26 engineers in 10 days. Each engineer was enticed into driving the Pierce Arrow himself, to see that the big car could be

steered as easily as a bicycle. All of them were impressed with the new device, and they said so.

The General Motors men were the most enthusiastic. Engineers from the Sagmaw Division, which made GM steering gears, thought that power steering might be a natural for Cadillac. And when a one-year option was taken early in 1927, Davis felt that he was in.

But development turned out to be an interminable business. The device had to be fitted to the Cadillac engine. Bugs had to be worked out in long test programs. Parts had to be redesigned to reduce costs and simplify assembly.

Disaster nearly sank the whole project once. Davis

glanced under an experimental power-steered Cadillac in which GM's Boss Kettering and some other top brass had just been zooming around the test track. A tie rod underneath didn't look right. Taken off, it proved to be cracked almost through—so weak that Davis easily snapped it across his knee. The defect had nothing to do with power-steering, but it was a close thing: Davis knew that a headline-making smash could well have destroyed his hopes.

GM's option was renewed each year as development ground slowly on. While making his living as a consultant. Davis worked in his spare time at trying to add road feel to his steering system. He finally hit on a trick of bleeding off some

hydraulic pressure to oppose the movement of the steering valve, an amount that varied with changing road conditions.

"Hydraulic reaction" was developed in 1931 the same year that Davis received patents on his open-center valve and centering spring. By this time Cadillac was ready to offer Davis a four-year agreement guaranteeing him a small annual minimum payment. But the inventor thought that the GM patent lawyers were hard bargainers. After several days of haggling, Davis put on his hat and walked out. Half an hour after he reached his Detroit hotel, the phone rang, "You win," said the GM lawyer, "We'll sign it the way you want it."

By 1933 a power-steering unit in one of Cadillac's big 12-cylinder jobs was working fine. The time had come, the engineers said, to go into production.

But the brass disagreed. The depression had set in like a cold wave and production would probably be less than 15,000 Cadillaes in the coming year. Spread over so few units, tooling costs would push the retail price of power steering so high that the public wouldn't buy it. Production plans were called off and GM asked Davis to give up his guaranteed minimum payment. He refused, and 1934 found the inventor right back where he had started, looking for a customer.

It took two years to find one. Then Bendix signed up with Davis. But Bendix built no cars itself; it made parts for others

Doer and Thinker

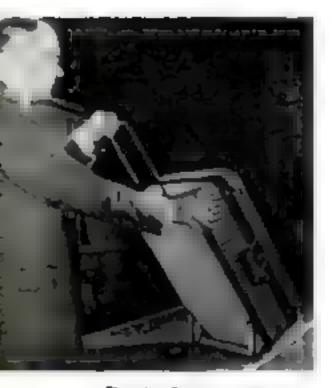

Davis (right) with George W. Jessup, master machinist, who has been translating the inventor's ideas into metal for a third of a century

Power-Steered Chevrolets, 1940

These Chevrolet armored cars, built for the British in 1940, were the first vehicles to go into production with Davis power-steering units.

Davis demonstrates a recent invention: a suitcase designed for do-it-yourself portering.

--on order. By 1939 Bendix had produced exactly 10 powersteering units and sold two of them, mounted on trucks.

Meanwhile, Davis stuck to earning a living—and improving power steering. In 1941 he patented a lighter and more compact method, called "axial movement," to make the steer-

ing wheel close the hydraulic valves. The lower end of the steering column is threaded to mesh with gears. When the column is turned, the initial resistance of these gears makes the column move in or out slightly, like a bolt in a threaded hole. It is this motion—only .060 inch—that Davis harnessed to close the valve.

In 1940 Buick had bought and installed three power units. They worked fine and costs were figured and okayed. But before marketing could get under way, power steering was dealt a second body blow Civilian auto production, with or

without power steering, went out with Pearl Harbor.

Military needs, however, gave Bendix and Davis substantial orders. Already the British Army had ordered them to go into Chevrolet armored ears. The American forces put in a similar order. Other units went into huge tank-recovery vehicles, which were heavy and hard to steer.

With power steering tested on the battlefield, Bendix was able to find off-the-highway markets for it when peace came. Units went into huge earth-moving and track-laying vehicles. Others were adapted to farm tractors, so that even the kids could plow.

Davis, however, was still after big game—the passengercar industry. But at Buick he found that the three cars with power steering had disappeared. So had the executives familiar with power steering. Their successors were not interested in his idea.

The general reaction went something like this: Sure power steering's good, But we don't want it—not now, anyway. In the first place, our competitors don't have it, so we don't need it to keep up. Besides, this looks pretty complicated—who knows what hidden maintenance problems might turn up? What's more important—let's face it—we're selling all the cars we can make right now. Why should we invest millions in new tools?

In 1948, Davis' original 1931 patents ran out and the basic principles of his power steering were open to everybody. Fortunately for him, however, the axial-movement patent, taken out in 1941, still remained to give Davis units a

[Continued on page 270]

1 Truck to Stow Its Cargo. Instead of carrying cartons into this truck, loaders would stack them on a paliet that would roll on rails recessed in the floor. Unloaders

could push each flat pallet, with its cargo, back to the door. The empty flats, stacked endwise along the wall, could be moved toward the door and lowered for loading.

2 Wiper Blade to Scrape Sleet. This stiff-edged scraper would clip around a windshield wiper blade and could be slipped off quickly when it wasn't needed. It would be made slightly narrower than a standard blade so that the rubber edge would stick out a little and bear against the glass brushing away scraped ice.

Blowing through this porous muffler, an ordinary electric fan would sound, according to the inventor, like "the sighing of wind through trees." The pleasant, regular drone, he says, would help you fall asleep. It would also drown out sleep-destroying noises of traffic, neighbors, cats, and dogs.

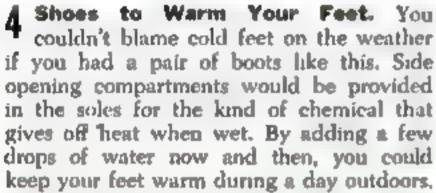

FEBRUARY 1956 | 65

MORE New Ideas from the Inventors

5 Bench to Hide or Hold Ironer. It would be difficult to turn an ironing board into a handsome piece of living-room furniture. This design, however, would hide the board inside an attractive, lift-top bench. Short, collapsible legs—and the bench itself—would form the work stand when the ironing board was set up.

7 Train Sign to Call Stations. Passengers wouldn't have to scurry to get off a train if signs and loudspeakers announced each station a few minutes before arrival

time. A tripper for the film-strip signal mechanism would be geared to an axle of the car and thus synchronized with the distance that the train had traveled.

6 Dial to Show Wheel Direction. A driver might find it easier to get in or out of parking spaces if he could see which way his wheels were pointing. Linked to the steering gear through a flexible cable, this device would show wheel position on a dashboard indication. It could be factory-installed or attached to present cars.

Bell to Tell When You're Out. Normally this button would ring a doorbell in the usual way; but when you went out or just didn't want to be disturbed, you'd switch off the bell. Pushing the button then would light a sign telling visitors you were not at home. You could set a dial on the sign to announce the time of your return.

9 Electric Steamer to Peel Paper. With this wallpaper remover you wouldn't have to pipe live steam to a wall or grapple with a hand-held steam tank, Cold water, piped from a separate tank, would be sprayed through an adjustable nozzle. The electric faceplate of the peeler would turn the spray to steam right on the spot

Mechanized Section Gang

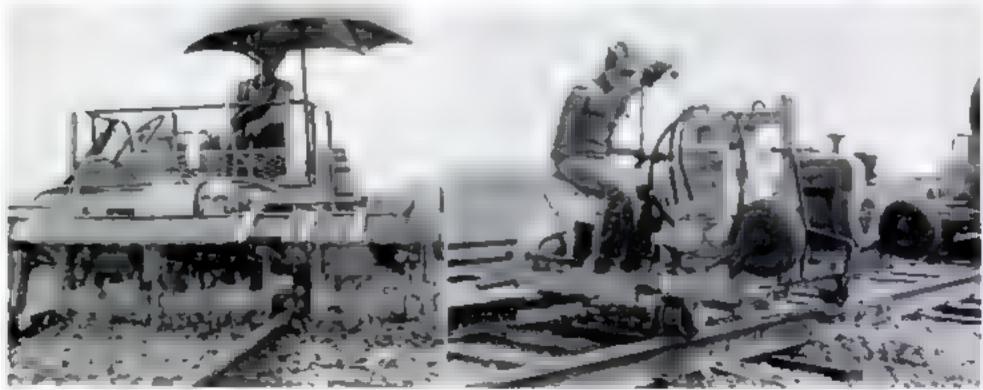

Track machines renew ties on the Santa Fe.

HERE are approximately a billion crossties on America's railroads And while a creosoted tie lasts 30 years, or roughly three times as long as the rails above it, at least 33 million ties must be replaced each year to keep main lines, branches and yard tracks up to par. To do the job costs more than \$150,000,000: \$3 for each tie plus \$2.15 for labor if the tie is installed by hand.

There isn't much that the railroads can do about the cost of ties. But to whittle down replacement bills they are

1 SPIKE PULLER heads the parade. Working like a huge pair of phers, its hydrauhe pulling tool can be swung over either of the rads.

4 TH BED DIGGER cleans out the cement-hard ballast after the tie has been removed, deepening the trench for a new and heavier tie.

5 THE INSERTER uses a cable and butting plate to shove the new tie into place after the end ballast has been cleared out by hand.

Now Lays Railroad Ties

working with equipment manufacturers to develop fleets of small, single-purpose machines that will do the work faster, better and cheaper than the old-time section gangs. To make good, the equipment must be highly mobile, husky, easy to operate, and inexpensive to maintain.

The robot trackworkers shown here are among the most efficient yet built. Manued by a team of 31 specially trained Santa Fe maintenance-of-way workers, they whisk out old crossties and shove in new ones at a cost of 93 cents

a tie-a saving of more than half over the hand-jack, ballast-fork and spike-maul method.

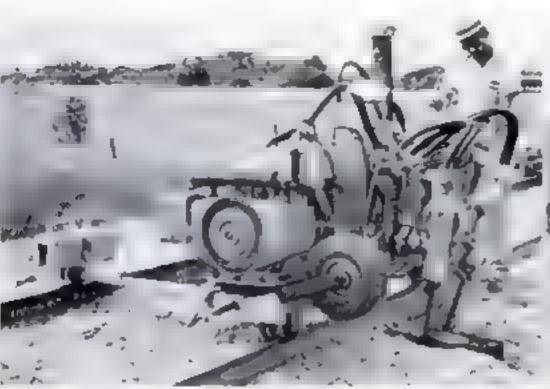

Any one of the machines can be lifted on or off the rails by one man or two, and each member of the crew knows how to operate all seven. That means that manpower can be concentrated on any part of the work that lags, preventing the fleet from bunching up. An outfit like this can remove and replace 125,000 ties a year—or enough to completely re-lay 47 miles of track.—Henry B. Comstock.

2 MAIL LIFTER locks onto both rails and hoists them clear of the tie plates, hydraulically With the plates removed, the tie is freed.

3 THE REMOVER now goes to work. Gripping the rails, it pushes the tie out by applying three thrusts with a prong-tipped ram.

6 MUATIPLE TAMPER next compacts the ballast under the tie. Two machines are used, one to work on each side of the track center.

7 SPIKING CARRIAGE. The plates must be inserted by hand, after which air hammers on this air-compressor drive in the spikes.

NeW for Modern Living

Insulated vest permits unrestricted arm movement for active outdoor work or sports. A vinylfoam lining keeps out wind and cold, and an extra long cut at the back lends added protection. Light and buoyant, the lining is said to keep the wearer affoat in case of any accident on the water.

3 Automatic davenport unfolds like a convertible top. A push button starts a hydraulic pump linked to cylinders at the pivot arms, to open or close the bed. There isn't enough pump pressure to fold up the bed while you're in it, nor can the sofa be opened accidentally if anyone is seated on it—instead, a fuse blows out.

Further information about the graduets described an their pages can be obtained from 1 Ofice Luciona, 576 Front St., Lake Linden, Mich.; 2. Tappan Stone Co., Mansfield, Ohio, 3. United States Beading to 51 Paul 11 Minn., 4. Frigodoire Die, General Maiors Corp., Darton 1 Ohio, 5. Zeni h. Radio Curp. 600: W. Dickens free Chicago 39, 101; 6. Bell Electric Co., 1844 F. 21st St., Chicago 8. 101., 7. Precision Products Co., Cupertino, Calif. 8. Keternator Futer Coolers, 265 N. Hamslton Rd., Cutumbus 13, Ohio.

2 Cold oven cooks with microwaves. If you'd like to invest \$1,200, you now can have most of your cooking at home done in a cold electronic oven. It works by ultra-high-frequency waves of the kind that transmit television pictures. They cook food without heating the oven walls or the dishes in which it is prepared. The oven is fast, too. You can broil bacon on a paper plate in two minutes, bake a cake in six, and cook a five-pound roast in half an hour.

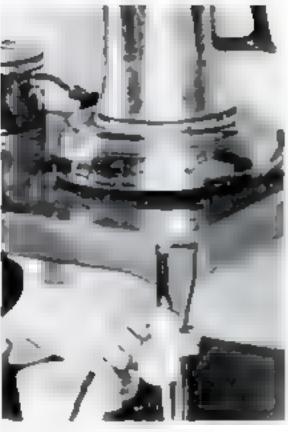

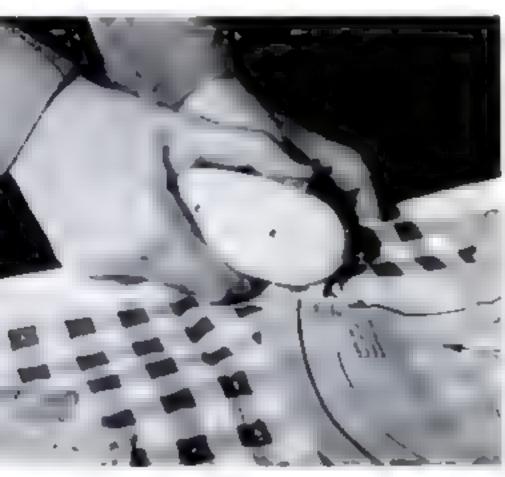

4 les sjector in the freezer of this refrigerator forces ice cubes out of the tray when it's pushed in upside down. Cubes drop into a storage bin below, which holds up to five pounds of ice. The temperature of the freezer keeps the cubes from sticking together while stored in the bin

5 A throbbing alarm is built into this watch A stem above the winding stem sets it. At the hour set, a tiny hammer striking a pin causes the back to vibrate against the wearer's wrist. The watch was designed for the hard of hearing, but it could be used as a silent alert by anyone.

6 Clamp-on outlet with extension cord brings power to tables, workbenches, barbecue carts and other metalbased equipment with round or angle legs. For safety, a cap over the outlet must be turned to admit the plug; it snaps shut automatically when the plug is removed.

Telectric scissors cut smoothly without effort by just being run through the material. Plug them in, press the starter button, and the blades snip through thin or heavy fabrics in fast, straight lines or slick curves. The shockproof plastic case fits snugly in the palm of your hand and a six-foot cord gives you plenty of room for cutting out a dress without having to shift the work.

8 Dual fountain. Here's a water "cooler" that dispenses piping-hot water, too—for the coffee break and the lunch hour. A built-in water heater heats the water to just the right temperature for making coffee, tea, chocolate or instant soup. A full tank can serve up 20 cups of steaming water at once, and heat up more at the rate of 40 cups an hour. Two gallons per hour are cooled.

Gus and the Ninety-Day Wonder

By Martin Bunn

I JUST can't figure it out, Gus," Johnny Carter said mournfully. "This was one of my A-1 cars. Had a new-car guarantee. In fact, it was as good as new when it left my lot. But he's claiming all over Capitol City that I cheated him—sold him a lemon."

Gus looked thoughtfully at the young car dealer. "Did you give him free ser-

vice for 90 days?"

"I would have, but he didn't bring it in until the ninetieth day, and then he just wanted it winterized. I put in winter-grade oil, tuned it, and put in antifreeze. I even wired a little tag to his radiator hose showing how much antifreeze I had put in and that it was good for 30 below—that's one of my little service courtesies."

"What's the matter with his car now?"

Gus asked

"It skips. It went for about 10 miles after I serviced it and then it began to miss. There's a short in it somewhere, and neither my mechanic nor I can find a thing."

Gus said consolingly, "There are cars like that, Johnny. Maybe it is a lemon.

It's not your fault."

"Gus, you don't understand." Johnny Carter ran his fingers through his rumpled hair. "When I got out of the service, my one ambition was to have an automobile agency of my own. I took every cent I had and put it into this used-car lot, hoping to make enough money and a good enough reputation so that I could have the new auto agency everybody said was due to be started

in Capitol City." He stopped for breath.

"But selling one lemon isn't going to ruin your whole career, son," Gus said.

"Oh, isn't it? The guy I sold it to is the brother-in-law of the man who allots franchises in this part of the state. He can make me or break me."

"Why not buy the car back from him

for just what he paid for it?"

"That's what Gruntzman wants me to do, In fact, he's insisting. He says I had it rigged so that it would run for 90 days and then, blooey! He calls the car the Nmety-Day Wonder."

"Gruntzman," Gus mused, "Where

have I heard that name before?"

"Only every other hour on station WCAP," moaned Johnny, "He's Grunny Gruntzman of Platter Parade, the disc-jockey show. That's him now!" Johnny indicated the music that was coming from the back of the Model Garage.

The music stopped and a voice came

through the loudspeaker.

"DO I seem a little out of breath, guys and chicks?" The voice made Gus think of maple syrup that had been carbonated. "I've been running," the voice went on. "I started for work. like I always do, in my Ninety-Day Wonder, and like always it began skipping and coughing. So I had to push it all the way to the studio." In the background there was a peal of laughter from some studio guest. "It tried to turn in at the lot

"Now," said Gus, "if you people will step back, my little expert will go to work."

where I bought it, but I won't let it go home until the jerk that sold it to me gives me my money back, I wonder who he'll sell it to next?"

Johnny ground his fist into the palm

of his hand.

"It won't be long before everybody in Capitol City knows who he's talking about. I'll be ruined."

Gus put his hand on Johnny's shoulder, "Son, we've got to prove he's wrong and make him eat his words. You tell him to bring his Ninety-Day Wonder in here."

"I'll do it, Gus. Thanks a lot!" Johnny waved from his car window and was off down the road toward Capitol City.

Gus looked at his watch. It was sixthirty. He walked to the washroom at the back of the shop. As he passed Stan Hicks, he said, "Can you hold the fort until closing time? I'm going to the inter-city basketball tournament with Red Plummer." Red

was sports editor of the Capitol City Times.

Stan whistled. "Free seats again, Gus? Boy, it sure pays to have friends in the newspaper business."

The next afternoon Johnny Carter was back again. His face was long. "He won't come," he told Gus. "He just wants his

money back."

Gus filled his pipe thoughtfully. "Let me get a couple of things straight, Johnny. Grantzman had no complaints about the car during the 90-day guarantee period."

"Right."

"He brought it in to have it winterized on the day the guarantee ran out. Was that just a coincidence?"

"I think so," Johnny said. "He liked

the car up to that time."

"You tuned the car, changed the oil and put in antifreeze. Right?" Johnny nodded. "And you tied a card saying how much antifreeze you had put in and

what temperature it was good for on the radiator-hose connection."

"Most service stations don't do that," Johnny admitted, "but I thought people might like it."

"Good. Now you run along. I've got a

couple of phone calls to make."

THE result of Gus's first call appeared in the Capitol City Times the following morning. It was a small advertisement: "I specialize in fixing Ninety-Day Wonders." It was signed: "The Model Garage, Gus Wilson, Prop."

The result of another phone call appeared as the first paragraph in the col-

> umn, "Red Plummer Looks At Sports":

As readers of this column know, our motto is: "If you can't be an athlete, be a good sport." A certain radio disc jockey has been making jokes about his Ninety-Day Wonder, a car he bought from a local second-hand-car

second-hand-car dealer. That may be fun for the disc pokey, but it's pretty hard on the man who sold him the car. There is an advertisement elsewhere in this paper by a man who specializes in fixing Ninety-Day Wonders. Do you suppose this certain disc jockey will accept his invitation? Do you think he really wants his car fixed?

Gus turned to Stan, who had been reading over his shoulder.

"Let's hear what the opposition has to say." They walked to the back of the shop and turned on the radio.

A voice faded in. It was Grunny.

"-but your friend Grunny isn't going to take this lying down. No, sirl I'm going out to this Model Garage this afternoon—"

Gus chuckled. "I knew that needle Red Plummer gave him would pay off."

"-and I've arranged for WCAP's mobile unit to accompany me-"

Stan looked at Gus, eyes widened.

"I wish to report on occident"

How to Build a Rotary Tiller

The toughest part of the machine comes ready-made; powering it with the engine from your lawn mower cuts cost way down.

By Howard G. McEntee

RIGHT around home you may already have half the makings of a rotary garden tiller. The engine of a gasoline lawn mower can be worked double shift to cultivate your garden as well as cut the grass. Switching it from mower

to tiller, or back again, should not take more than 10 or 15 minutes

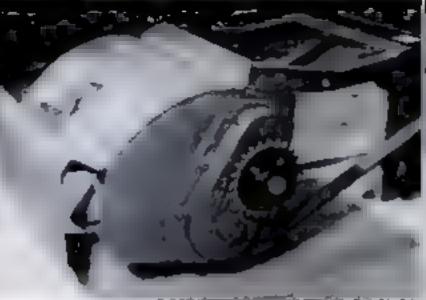

This two-for-one deal saves you the cost of a separate engine, and may put a tiller to work for you at just about half the price that you would otherwise pay. Nor need you be a mechanical whiz to build the machine; the most difficult

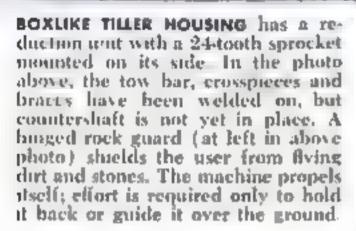

Tiller rotor is driven by a chain from the countershaft

PURCHASED TILLER and H-shaped tow har are shown shaded in the drawing below, Pieces of angle iron are welded on to support the engine, wheels and countershaft. Adjust chain tension to leave 1/4" of slack as at right. If slots do not give enough adjustment, put washers under the spacers. Adjust V-belt tension by moving the engine backward or forward on its mounts. MOUNT ON BLOCK BOLT ANGLE PLATH**S**AI HOLES FOR CUT FLANGE AWAY TO BEND CONTROL HANDLE CHAIN GUARD CHAIN CASE DRILL SA AT No ROD COUNTERSHAFT 1915 SLOT 5 No DLAVE 10º40 יישב סי ORIGINAL TOW BAR BOLT DRILL ANGLE 4112×15 HANDLE FRAME CUT END OF BRACE TO FIT TILLER

Housing and rock guard protect the user

parts of it are available already made up.

These are the tiller-head components—the shaft and tines that stir up the ground. A national mail-order house sells a 12" head as an accessory for a small garden tractor.* Costing about \$37, it is a well-made, neatly housed unit with hardened tines, good bearings, a built-in chain reduction and a rock guard. The times are replaceable.

If your mower engine has a centrifugal clutch and you put 1%"-wide wheels on the tiller, the total parts cost will run about \$52. (The tiller shown cost more because it has heavy-duty 2%" wheels. These make it easier to handle in soft soil, but are by no means a must.) Welding will run four or five dollars if you don't do it yourself, but will still leave the total cost well below that of a comparable commercial machine.

Use all the pieces. With the tiller head you get a drive chain and an H-shaped tow bar for coupling to the tractor you haven't got. Both will be useful.

A boxlike angle-iron frame, to which the tow bar is meant to be bolted, is

*Various attachments of this kind can be adapted. The drawings and construction methods described relate to Montgomery Ward a rotary-titler attachment No. 87-5086 for the Tri-Tracgarden tractor. Semi-phenium 10"-by 1.75" wheels are available from various mail-order dealers at about \$1.65 each. welded atop the tiller housing. The first thing to do is "unweld" this. Make centerpunch marks along the weld beads, the diameter of a 3/16" drill apart. Run a drill that size in at 45°, just to the surface of the housing. Then use a diamond-tip cold chisel to cut through between the holes. Discard this frame.

Cut a piece of 1%" angle iron to span the full width of the housing, long enough to be welded to the ends as well as to the top. At one end, cut the vertical flange at a slant to clear the countershaft pulley.

Drill the top of the H frame for holts to hold the countershaft mount. In the vertical flange of one frame leg, drill a hole for a handle bolt. The other handle mount is a 2" length of 1%" angle welded at the end of the housing.

The front crosspiece, a 15" length of angle, projects past the H frame on one side to line up with the housing.

Check your engine. This front crosspiece and the crossbar of the H frame form the engine mounts. The slots shown fit a Model 6 Briggs and Stratton engine; for others, minor changes may be needed.

By careful fitting and the use of extra brackets you could bolt the parts together. But welding makes the job easier and results in a far stronger structure, with no bolts or rivets to work loose from vibration.

If you have the welding done outside, be sure to cut, drill and fit all parts beforehand. It's smart to clamp them up in a trial assembly. Scrape paint off the tiller head where welds are to be made. Remove the chain case and gasket so that welding heat will not damage the latter.

Wheels. Some commercial tillers have no wheels. But wheels give easier control of working depth, and facilitate moving the machine, especially over paved areas.

You can buy 10" rubber-tired wheels with a 1%" tread for less than two dollars apiece, or a metal-tired type made for wheeled garden tools for even less. For 10" wheels, weld the shaft hangers into the braces as shown in the drawing. For other sizes, locate them so that the engine will be level when the bottom of the tiller housing is about 1" beneath the soil. With the tines on a hard surface, the engine will slant forward. (As some will stall in this position when the fuel is low, it is important to have the engine nearly level in the working position.)

The drawing on the facing page shows the axle turned down and threaded at one end. You can, instead, use a shaft collar at both ends, and so avoid machining. Be sure to use the felt seals shown if your wheels have ball bearings, to keep grit out of them.

#

The power train. It takes considerable torque to spin the tined shaft; an over-all reduction of about 1:16 is required with a 1%-horsepower engine. The reduction built into the tiller unit has a ratio of about 1:15. With an 8" pulley on the countershaft, the V-belt drive from the automatic clutch of the engine shown gives a 1:44 reduction. A 10-tooth sprocket on the other end of the countershaft drives the 24-tooth sprocket on the tiller head at a 1:24 ratio. Multiplying all the figures on both sides of the colon shows the over-all ratio to be 1:15.84.

If your engine does not have a centrifugal clutch, you can install one or rig a belt-tightening idler controlled by a flexible cable. This is cheaper, but the centrifugal clutch is handier, giving you full control by use of throttle alone.

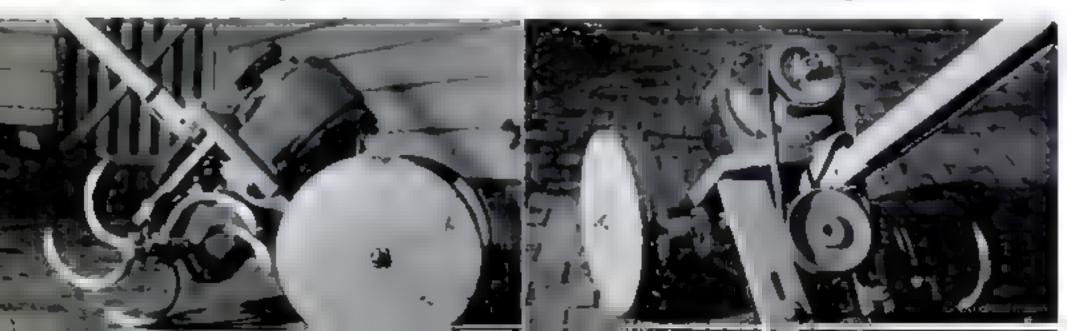

Mounting the countershaft. A 3/16" steel plate is mounted on the tow-bar legs with long bolts and spacers. Cut the spacers from %" pipe, taking care to get them all the same length. The bearings are bronze-bushed pillow blocks. Slots

A 1/4-Hp. Motor Drives This Light-Duty Electric Tiller

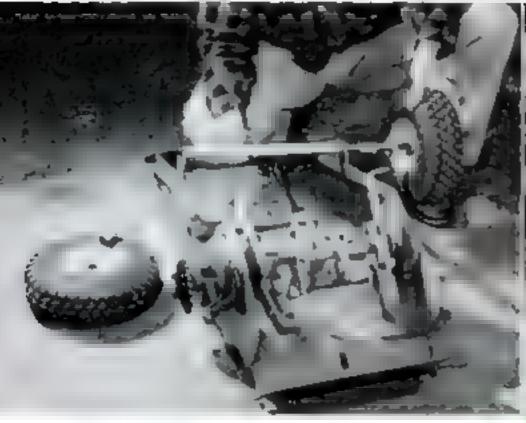

Wanting a light-duty rotary tiller, Everett M. Cronk of Ardsley, N.Y., made this electrified one. A V belt from its X-hp. motor drives what was once the wringer power take-off on a washing machine. Tines from a hand garden cultivator were fastened directly to the output shaft of this reduction unit, flats being filed on the shaft to key the tines securely to it.

A wooden motor platform is mounted on

two slotted posts, which can be slid up or down to adjust belt tension. The handle is from a lawn mower, the wooden wheels from discarded lawn furniture. Because the action of the offset tines tends to turn the machine, the builder plans to relocate the transmission to bring the tines closer to the centered handle. He also suggests using a smaller pulley on the motor shaft instead of the one shown, to further reduce rotor speed.

Wheels can be put inside for cultivating close-set rows

WHEELS ARE HELD ON either with a collar at each axle end, or with a collar at one end and a nut at the other, as in the drawing at right. Cut dust seals from \(\frac{1}{2} \) "-thick soft felt. For narrow-row cultivation, use a 15" axle, a spacer to fit between the wheels when they are inside the engine-support frame (above right) and felt seals on both sides of the wheel hubs.

for the mounting bolts allow these to be slid forward or back to adjust chain tension. Make sure that the shaft turns freely after all the bolts are pulled tight.

The sprocket is best held on the countershaft with a taper pin. A setscrew will secure the pulley provided you drill a dimple in the shaft for it to seat in.

Both for your own safety and to keep sticks and gravel out of the chain, a guard should be fitted. Cut one flange off 1" angle iron where it is to be bent to a radius, as shown in the drawing on page 176. Use flathead bolts, with the heads countersunk inside the guard, to join the ends and attach mounting brackets, one above, two at the lower end.

Handle is brased up. Cut X" electric conduit for the handle parts. Remove the zine coating with abrasive cloth where the brazed joints must be made. Flatten the lower ends before drilling them for the 5/16" mounting bolts.

The bracing fork consists of two pieces of 5/16" rod bent, threaded and brazed to a 3/16" plate. This is clamped under one engine-head bolt. With a nut on each side of the handle crossbar, the fork can

FURROWING GUIDE, provided with tiller head, can be set to hold tines at desired tilling depth, or it can be reversed with the hook forward as above. In this position it holds the machine back for deep cultivating or plowing.

be adjusted to raise or lower the handle to convenient working height. Bolt the throttle control within easy reach and slip bicycle handgrips on the top bar. END

Fast Spatter-and-Wipe Technique Kid-Proofs Tool Board

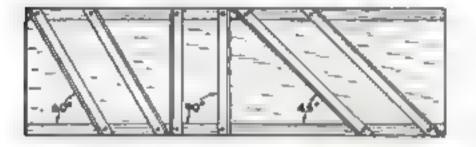

I had a hard time getting my young sters to return my tools to their proper places until I spatter-pointed the tool bested this way, leaving the outline of the tool in its correct position. The spatter method is faster than pointing in the contines and gives a pleasing appearance to the board

by tray of bright paint and draw a stick toward you across the bristles to ling the speeks on the board. Cleaning up the spattered tools is quickly done with a coth soaked in solvent—Bob Gilbert Sonoma, Calif

Tracks Guide Portable Saw for Cutting Automatic Angles

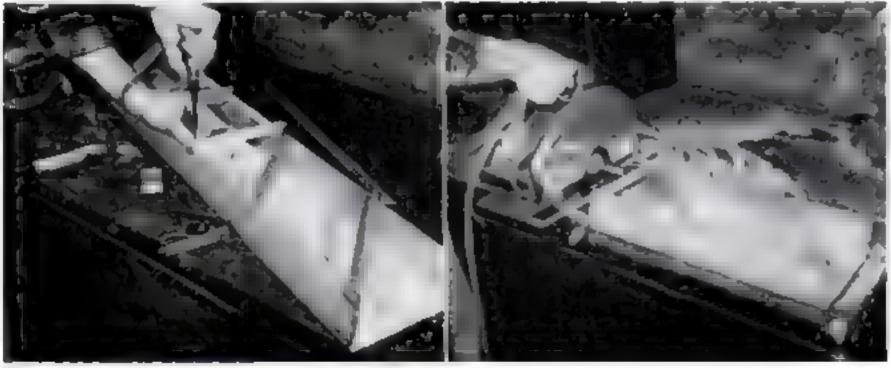

THREE pairs of rails let you cut accurate 45°, 60° and 90° angles with a portable electric saw. Cut the rails from a length of

X" aluminum angle and screw them to the top of a wood trough made to suit the depth of the saw blade and the width of stock that you want to handle.

Lay out the rails as shown in the sketch to produce the desired angles, and space them so that the saw's shoe plate slides easily in between. Countersink the screw heads flush with the rails. The first saw pass will slot the aides of the box for use.—

Phil McCafferty, Stanwood, lowa.

PLASTER IS SUTTERED over the side of the model coated with protective petroleum jelly.

EMBED WIRE to add strength. then cover with a second, beavier layer of plaster.

Plaster Casts Make **Perfect Templates**

JUTTING a cardboard template to match the profile of a turned chair leg or some other irregu-I larly shaped object is a tough, trial-and-error job. It is often easier to make templates out of plasterof Paris shaping them directly over the original parts that you want to copy. The plaster flows into small cracks and curves, accurately reproducing fine details.

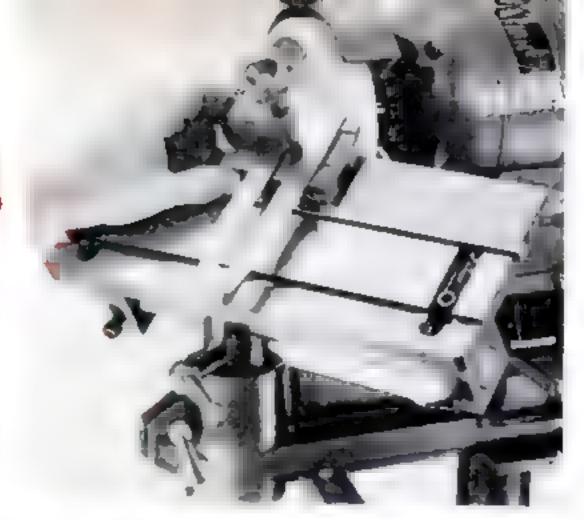

The plaster is mixed with water to a butter-like consistency and spread along a narrow section of the model's profile, about 1" to 2" wide depending on length. On long templates, you can embed a reinforcing wire down the center as shown. When the hardened cast is removed, saw off the rough edge on each side, leaving a center strip from \(\cdot'' \) to \(\cdot'' \) thick. Applying shellae will give the plaster a hard, smooth surface and prevent details from chipping and crumbling.

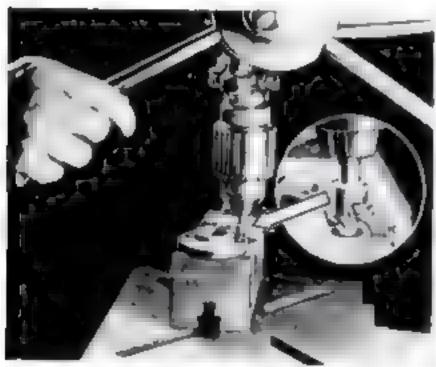

To make a duplicate lathe turning, you can use a cast to lay out the initial cuts, then keep fitting it to the work until the two shapes mate perfectly. If you want to make full-size drawings or other templates, you can also use the cast as a drawing guide, tracing the contours with a pencil. The templates can be stored indefinitely and will not become worn or dog-eared as cardboard may.- J. M. Finn, Pittstown, N. J.

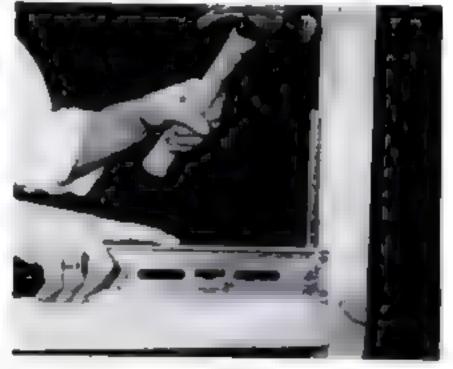

New Tools

1. Sharpener Handles Wide Range of Tools. Work table and tool guides are part of a universal sharpener for work shop, garden and household tools. The 6"-by-14" table adjusts to various angles and heights. A %-hp. double-end motor, grinding wheel and floor stand are medluded with the unit

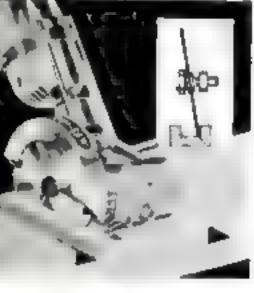

2. Countersink Ejects Chips. This countersink clears its own waste through a hole in the cutting edge, thus eliminating chatter and speeding the cut. It is made for Nos. 5, 6, 8 and 10 screws. Larger sizes, ranging from %" to %", are available on special order.

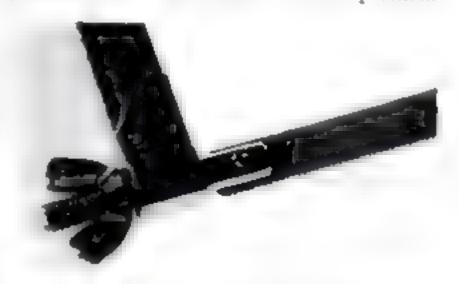

3. Level Combined in Square. You can use this tool as a square or level or as both at the same time. A slotted blade slides along rivets on the I-beam to form a square, or it can be set at a 45° angle. A wing nut adjustment locks the blade in either position.

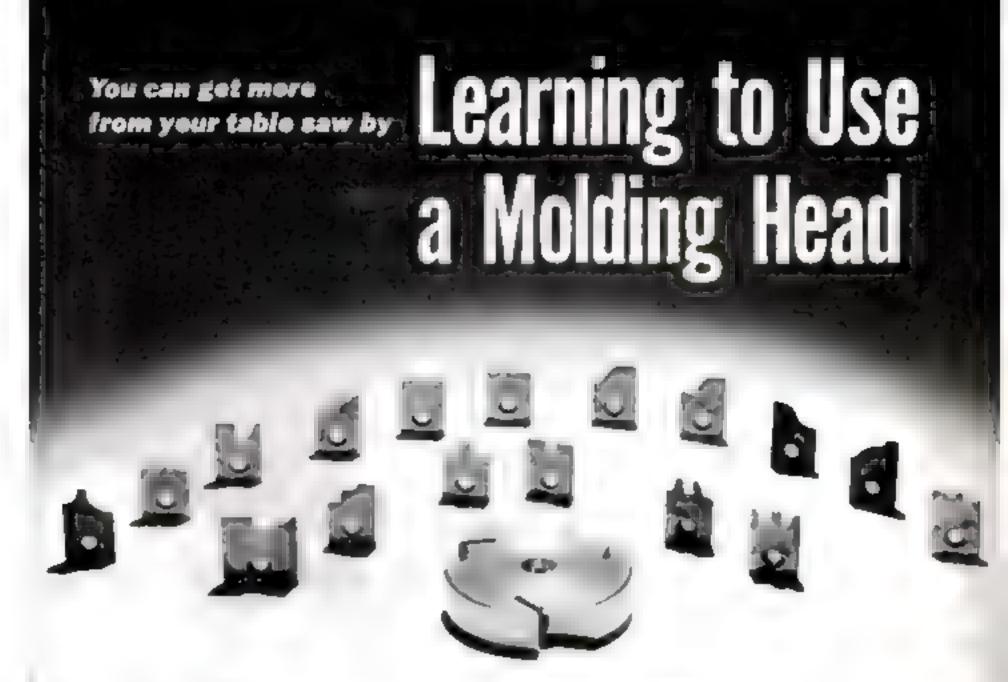

This saw attachment for a %" electric drill cuts grooves up to %" wide and 1" deep. A setscrew adjusts blade wobble and thus controls the cut. You remove an insert in the arbor to use the blade for ordinary cutting.

4. Dado Blade Fits

Further information about the new tools shown on this page can be obtained from: I. Beisen Machinery Co., 313 Westport Rd., Konsas City II, Mo.; 2. Raymoc. 15490 Date Ave., Detroit 23; 3. Mackinsbure Duncas Co. Box 1197, Oklahoma City, Okla.; 4. Arrow Metal Products Co., 140 W. Broadway, New York City 13; 5. G. W. Griffin Co., Franklin, N. H.

5. Hacksaw Blade Is Double-Edged. You need only turn this blade to cut either thick or thin metals. One edge with 18 teeth to the inch cuts bolts, pipe and rod; the other edge with 24 teeth, cuts tubing and conduit.

CHOOSE YOUR SHAPE. All these fit into one molding head (shown in foreground), and head mounts on saw in place of regular blade. Cutters lock into three slots around rim of head.

By R. J. De Cristoforo

TF YOU have a table saw, you should add a molding head. This accessory is not difficult to use. With an assortment of cutters, you can create many standard or original molding designs. You can also form edge joints, cabmetdoor lips and accomplish other operations normally requiring a shaper.

There are many kinds of molding cutters on the market, but they all work the same way on a table saw. The knives, usually sold in sets of three, are locked into slots around the edge of the head. The head is mounted on the saw's arbor between washers in the same way as a blade or dado cutter.

You can start your collection of knives with a few basic types, then add new ones as you need them. There are combination blades that permit different cuts depending on which part of the contour

FEBRUARY 1956 [83]

How to set up your saw to cut quick and accurate shapes

MOLDING KNIVES average about 1" wide so that you need to replace regular saw-blade insert with a dado insert like this. Always make sure that knives clear the slot before starting.

FOR EXTRA-WIDE CUTTERS, make your own inserts from thin hardboard or plywood. Screw them down, then slowly raise blades from below so that they cut their own slots to exact size.

BOLT PLYWOOD FACING to rip fence to clear the cutters, with counterbored heads on blade side and wing nuts on other. If fence has no holes, you can clamp wood strips around it

you use. With these, you can shape table edges, make your own moldings and do many other decorative jobs.

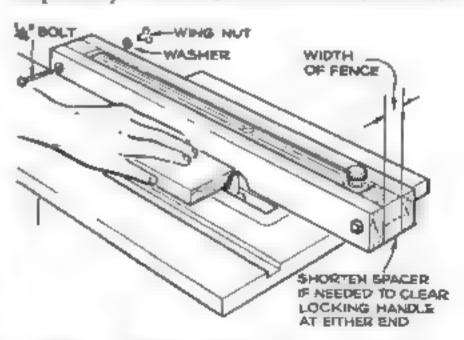

Standard cutters are each designed to do a specific job and usually require using the full contour of the blade. These cut shaped edges for window sash, glue joints, door lips and panel-door inserts If you are uncertain which ones to choose, buy one set and ask for a profile sheet that illustrates the others.

Unlike a saw blade, which removes a small amount of material, a molding cutter takes a big bite. Never force the work through the blade or try to cut too deeply.

On very deep cuts, make several passes, adjusting the height of the knife after each one, to attain the full depth of cut required. If the machine stalls, vibrates, makes it hard to hold the work steady, or throws out chunks of wood instead of fine shavings, you are trying to cut too heavily.

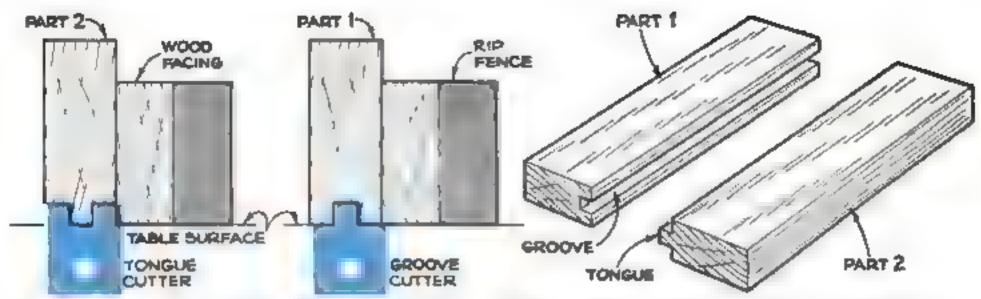

Molding heads function efficiently at the same speed required by a regular saw blade. Slowing them up or increasing their speed in any way may be dangerous. Be sure to read the manufacturer's literature provided with your molding head for any special instructions.

Right after use, clean the knives of gum and dirt and coat them with oil to prevent rust. Store them so that the cutting edges will be protected from nicks. The head itself should also be cleaned, especially the slots in which the knives

(sketch at right above). To cut the semicircular recess, slowly lower wood facing over a head fitted with straight-edge cutters. Be sure that knives clear rip fence.

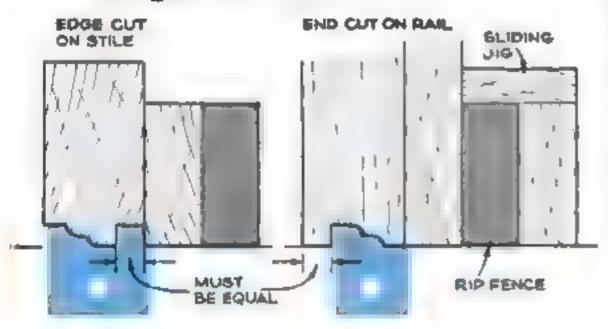

Using tongue-and-groove cutters

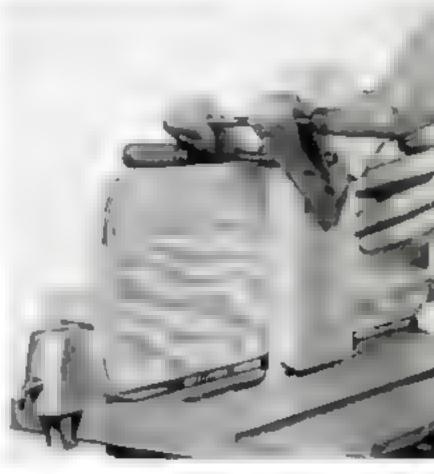

LOCK WOOD FENCE flush with edge of cutter and run first pieces through. To set up mating cutter, make tests on scrap to be sure that

tongues and grooves line up. On wood thicker than width of blade, center stock for first pass, then rip off shoulders left on tongue.

Using a sash cutter

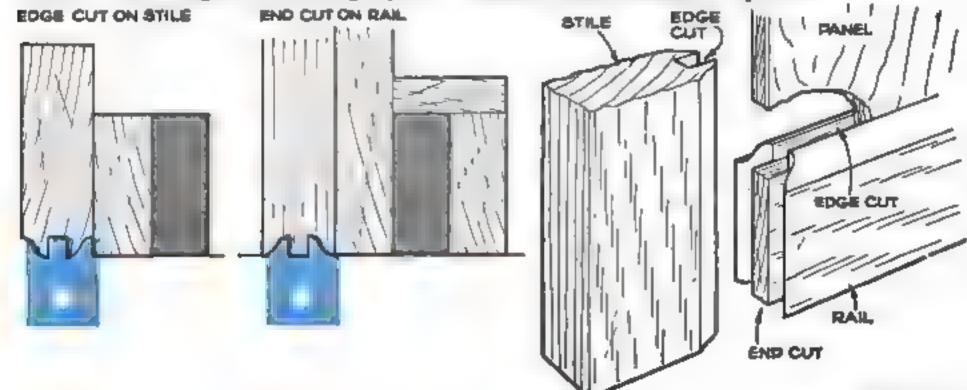

SASH CUTTER rabbets one side to take glass and puts a decorative edge on the other. To join pieces, cope cut is made in ends of cross rails with reverse-contour blade to mate with vertical stile. Jig at right slides over rip fence for making successive passes on rail-end cuts.

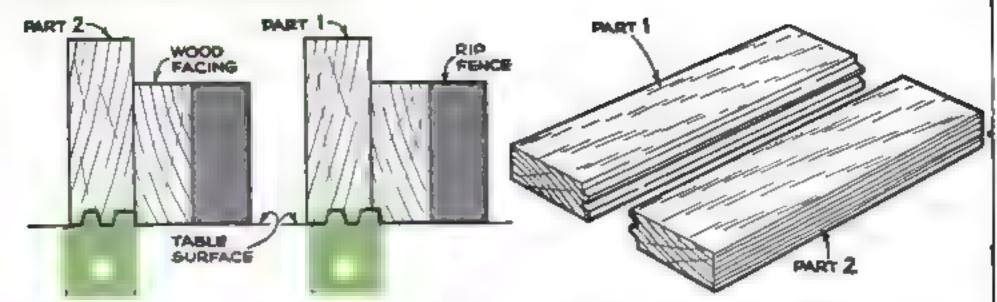

Using panel-insert cutters

INSERTING PANELS in cabinet doors is easy with these mating blades. One at left makes groove for insert, one at right the matching cope cut

on the end of the rail. Note how pieces meet at corners, forming a miter-like joint. Use jig above to make the rail-end cope cut.

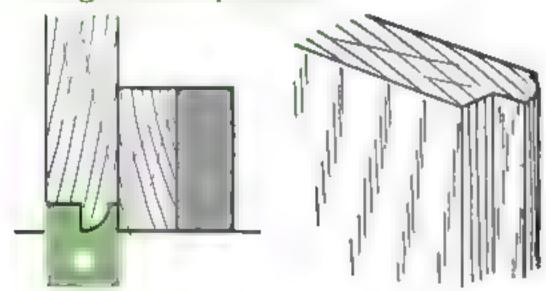

Using a glue-joint cutter

SINGLE CUTTER makes matching grooves for edge-gluing boards. On stock of same width as cutter (usually 1"), both mating pieces can be run through on the same setup, then one of

them flopped over to fit together. On thinner stock, make first cut by lining up board with inner edge of blade. Then cut mating piece by lining it up with the outer edge of blade.

Using a door-lip cutter

MOST DOOR-LIP CUTTERS are designed to leave a slight shoulder on the face of the door. If you don't care for this, shift the rip feace so that the shoulder-cutting portion of the blade is hidden under the wood facing. Curve of lip will then come flush with face of door. On stock thicker than blade, cut the lip as usual, then rip off remaining stock to complete the rabbet. If you rabbet the door all around, make the cross-grain cuts first so that any splintering at the corners will be cleaned off by the rip cuts.

fit. Never leave knives locked in the molding head.

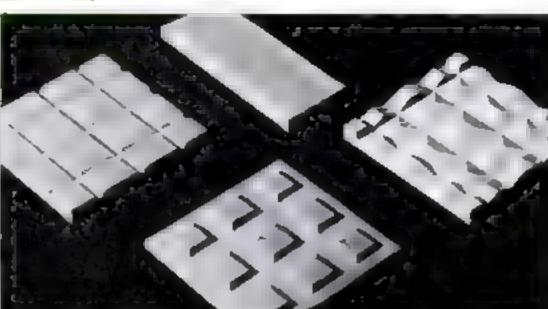

Remember, no matter how good your equipment is, cuts won't be good unless the setups that you make are accurate. So spend a few extra seconds to check

such things as knife height and rip-fence settings. Make trial cuts in scrap wood before cutting actual parts. This is especially important when you're using matching pairs of cutters, such as for window sash, panel inserts or tongue-and-

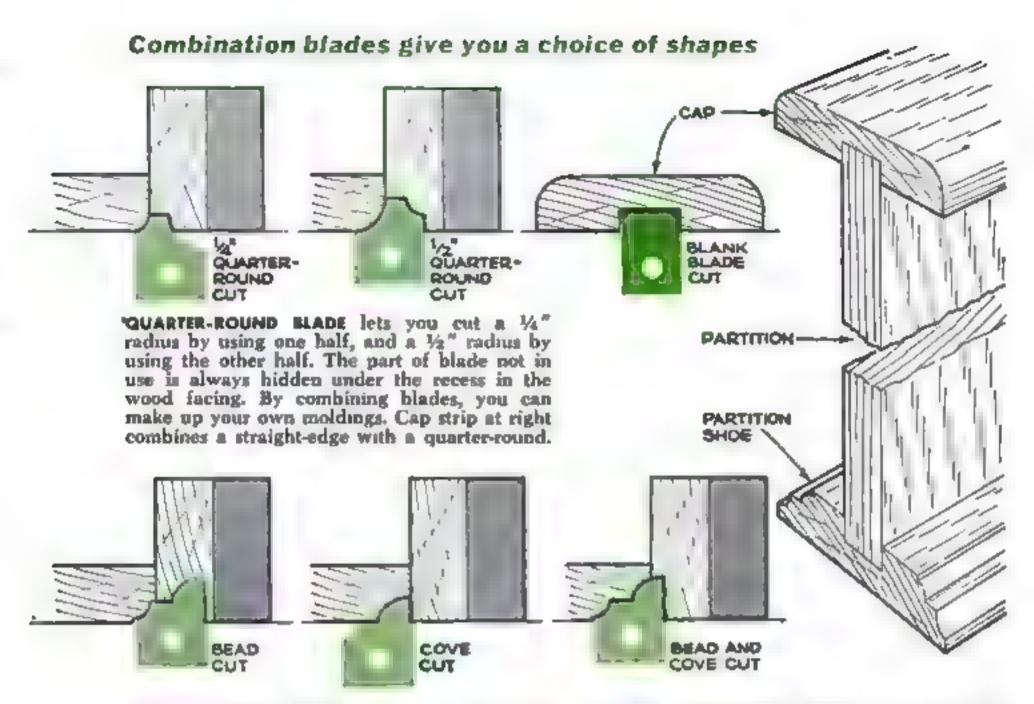

These tricks help you make special shapes.

BY flitting SAW TABLE, or arbor, you can make pyramid patterns and raised-panel designs like the one at far right in right-hand photo. Other designs at right are made with criss-cross and

parallel cuts on a flat table. Combination pusher and hold-down block (at left) has cleat at rear edge that books over work so that you can keep your fingers clear of the blades.

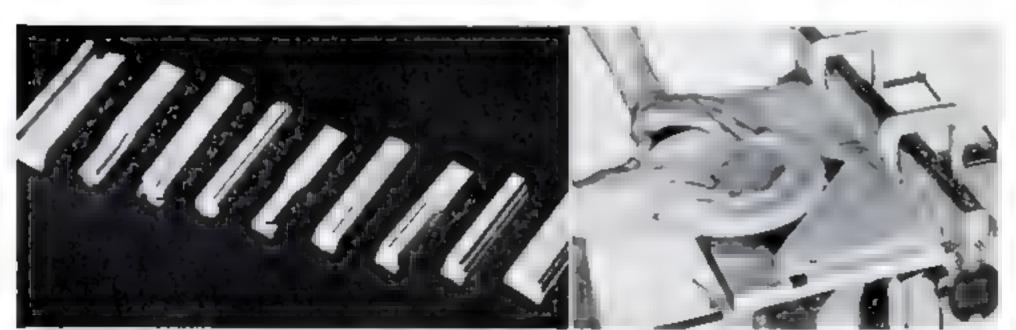

BEAD-AND-COVE BLADE cuts a convex shape when you conceal the tall half under the fence facing, as at left above. At center, you get a concave cut by shifting the fence out of the

groove joints. The mating cutters must line up perfectly or the joints will be spoiled. If the fit is tricky and you're in doubt, it's best to make the cuts on slightly thicker stock, join them, then trip off the excess wood. way and lowering the blade to use upper cutting half. In middle position at right, full blade is used to give a decorative edge, such as for a table or the partition shoe shown here.

It's also an excellent idea to cut the full profile shape of each knife as soon as you buy it and to "file" it for reference. Then you can easily tell, without practice cuts, what knife, or what part of the knife, you need.

END

TO SHOW WHAT YOU CAN DO, all of the shapes above were made with a single cutter, the combination 1/4"-and-1/2" quarter-round. Trial cuts on scrap will help you get shapes that you want.

SHAPE CIRCULAR PIECES by clamping two 45° triangular blocks to fence to form V. Feed work into V until it rests firmly, then turn disk slowly against the rotation of the blades.

A CLEVIS PIN, locked on by a cotter pin, holds the trailer tongue to the hitch. A safety chain hooked from the car to the trailer is advisable.

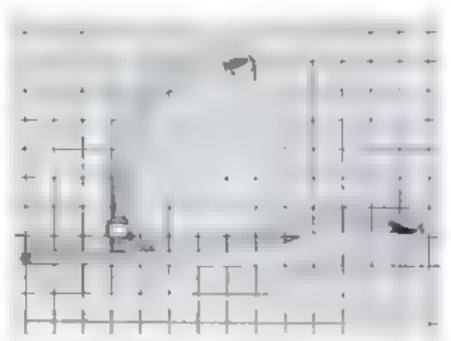

LOWER MEMBER of the hitch hooks to the rear cross channel of frame, upper one to bumper. Turning up the nut shown attaches the hitch.

On-Off Trailer Hitch Clamps in Place

Do you need a trailer hitch on your car just once in a while? Do you dislike having a permanent fixture hanging on the rear bumper?

Here, then, is the hitch for you. It goes on or off the ear in less than a minute. Even so, you need not shy at heavy loads since it pulls from the frame of the carnot just from the bumper.

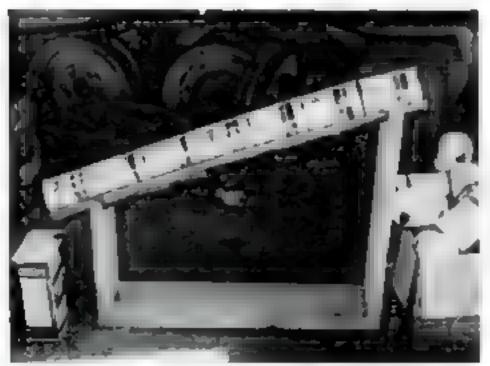

The bottom member was formed from a 15" piece of %"-by-2%" mild steel, the supporting strap from an 8%" piece of %"-by-1%" mild steel. A bolt with its head removed was welded to the lower end of the latter member. A small steel rib was also welded to the top surface of the bottom member. When the latter is in place,

A BACKGROUND OF 1" SQUARES shows the dimensions of the parts, made to suit a 1954 Ford.

the rib rests against the outer edge of the bumper and keeps the hitch from sliding forward on a sudden stop.—Ken Hadenfeldt, Storm Lake, lowa.

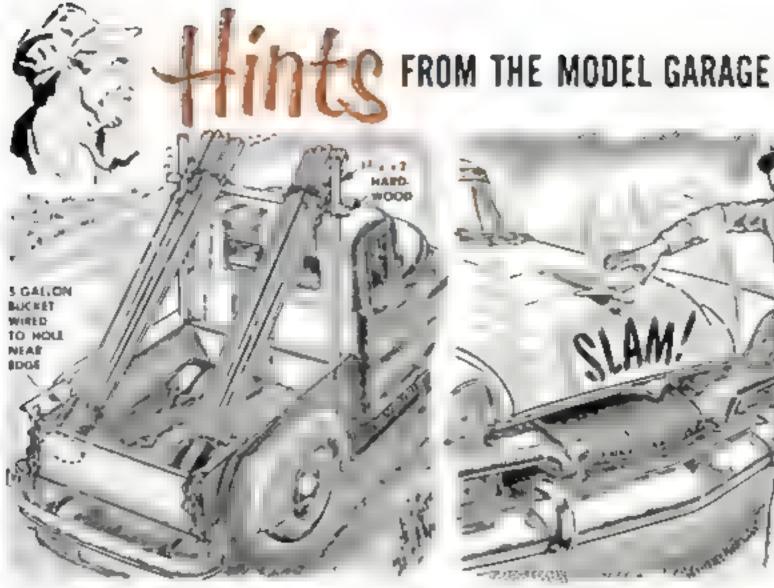

This Draining Rig Gets All of the Oil from Those "Empty" Cans

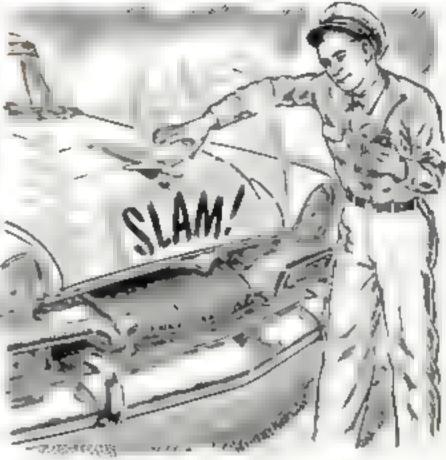

A SMALL amount of motor oil always remains in the tin containers after makeup oil has been added at a service station. In time, these drops can add up to a gallon of oil.

And it doesn't take long, either, as John Schmidt of Townsend, Mont., has discovered. He saves the drops with this simple rig. A length of eaves trough was set at a slant in notches in upright boards. When an empty is placed at the bottom of the line, the upper can is shoved off the rack and drops into a box for disposal. Oil drains into a gallon can at the lower end of the trough.

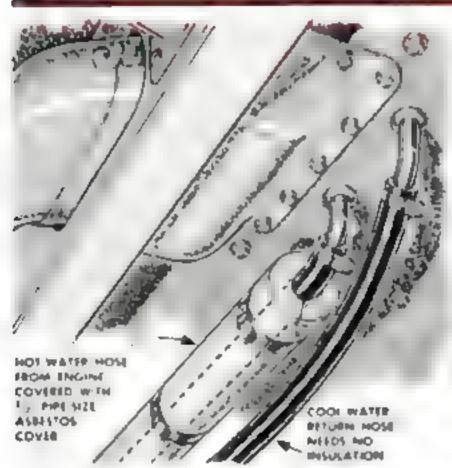

8 POPULAR SCIENCE

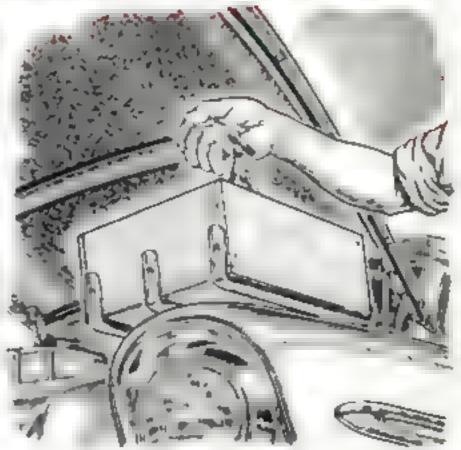

Carrying long pieces of pipe in a pickup truck is easy when you do it this way. Install empty pails in the rear corners of the truck bed to serve as quivers for the ends of the pipe lengths. Be careful if you should come to an underpass that's a bit low.

There ought to be a law against servicestation attendants who slam a hood shut. Engineers say that hoods were designed to close with gentle pressure. If slamming is required, previous slamming may have damaged the latch or warped the hood itself.

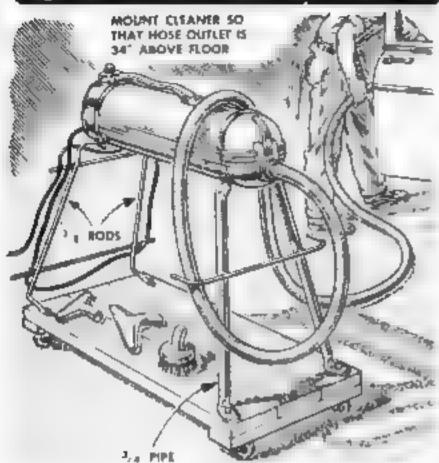

An underseat heater may lose heat from a long supply line. If you have this type of heater, better check to see whether you can do something about insulating the line. Applying the snap-on type of insulation used m houses will do the trick very effectively.

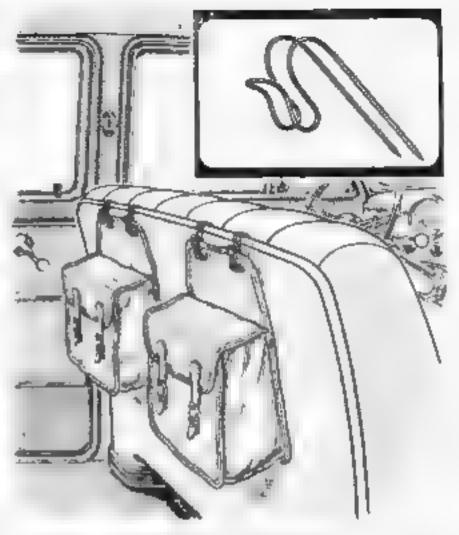

Two-tone parts boxes are not yet a necessity in a service garage. But one operator says that frequent replacement of gritty old boxes with new, clean ones pays off. Soft rubber on the bottoms protects fenders. Parts are cleaned before they're put back.

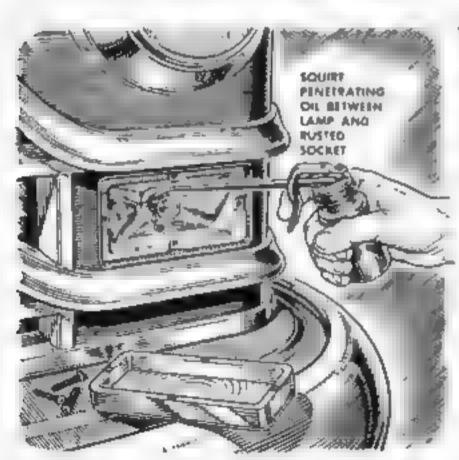

MORE Hints from the Model Garage

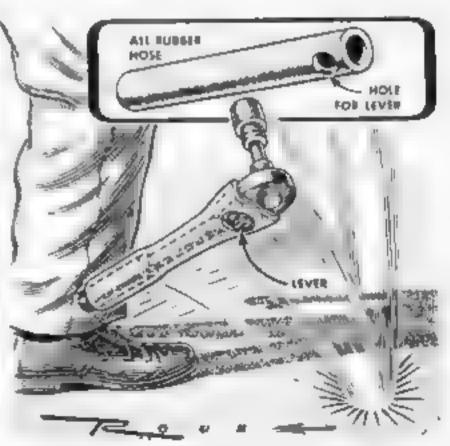

A vacuum cleaner mounted on a rolling stand like this makes it easier to clean car interiors in a service station. Dragging on the floor is eliminated and the cleaner is kept out of grease and dirt. A more effective hose length is achieved since the cleaner is at cushion height and follows easily us the cleaning job progresses.

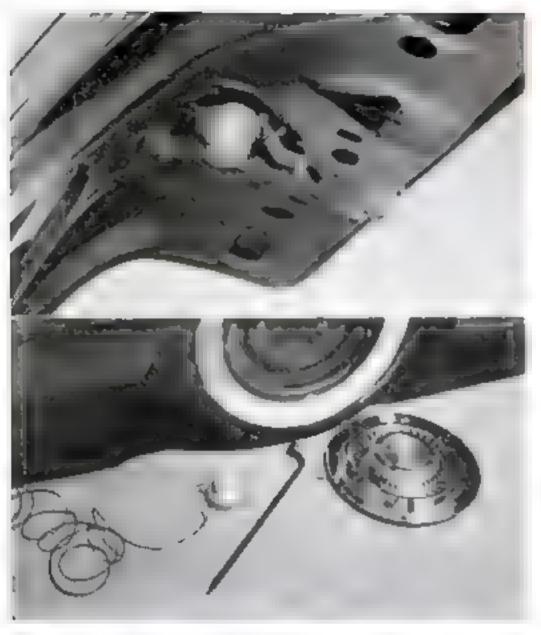

A pair of bleycle saddlebags mounted like this will add a lot of useful storage space to a sedan. The bags look good, too. Form a pair of supporting pins for each bag from 1/16" piano wire and sharpen the points. Just push the pins down into the upholstery. The bags can be lifted off the hooks and used as carriers if desired

Squirt penetrating oil around a tail-light or parking-light bulb that you find rusted fast to its socket shell. Otherwise, you run the chance of damaging the socket. Coat the socket and the new bulb with oil so that removal next time will be fast and easy.

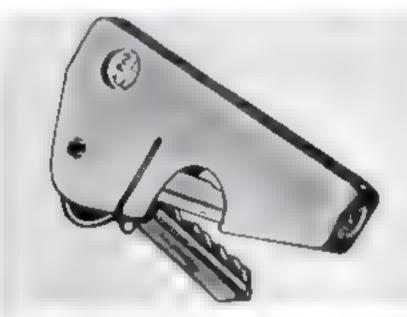

Oropping a ratchet onto a cement floor, when the tool is being used with a socket set under a car, is a common occurrence. Often the small lever is snapped off. As a safeguard, one mechanic slipped a piece of rubber hose over the wrench, like this.

New for Your Car

1. Trunk Lamp Reels Out. This mercury-switch lamp is a trunk light (top left) that can be reeled out as a trouble light (bottom) for fixing tires or making other road-side repairs. The accessory, designed for 1956 Pontiacs, has a 17' extension cord. It lights only when placed in a horizontal position.

Further information on these new car products can be often and from I General Mators (usp. Detroit link, 2 Gift Horizona 475 Fifth Acc. New York City 17, 3. Matorica, Inc. 4545 W. Augusta Blid, Change St. III., 4. The Etringer Mig. Co., 1319 S. Michigan Asc., Chinage 5, 111

2. Air Gauge Set in Key Case. This case will hold your car keys and also check the air in your tires. It has a molded-m air gauge that registers pressure in a small window. The case holds three keys.

3. New Radio Fits Volkswagen Dash. A six-tube radio with a separate 6"-by-9" speaker is being manufactured in this country for installation in Volkswagens and some other foreign cars. The faceplate is designed to match the VW's interior decor.

4. Crash Pillow Sticks on Dashboard. A safety pillow helps to protect a front-seat passenger who may be thrown against the dashboard in an accident or sudden stop. Suction-cup buttons hold it in place.

Wood Holder Guards Welding Tips

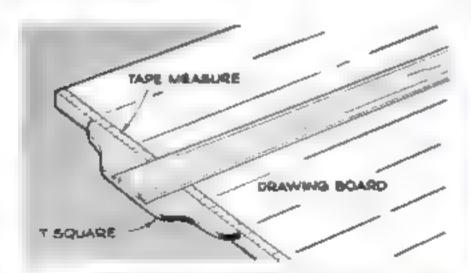

Welding a holder made of a block of hardwood. Drive a line of furishing halfs near one end of the block then measure off holes for the tip orifices and drill the holes into the wood at an angle,—W. C. Anderson, San Lorenzo, Calif.

Newspaper Keeps Lathe Clean

BEFORE you start a lathe job, slip newspaper under the bed to catch dust and shavings. When the job is finished, brush off the ways and pull the paper out from under the bed.—Harrison Neustadt, NYC.

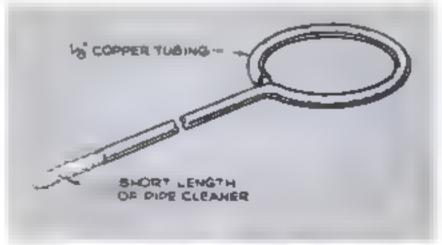

Tape Measures Off Ruled Lines

A CLOTH measuring tape tacked to one edge of a drawing board will be helpful when you lay out horizontal ruled lines. Use it with an intersecting T square for spacing.—David E. Holt, Columbus, Ohio.

Spool Holds Extension Cord

You won't knot an extension cord if you wind it on an H-shaped plywood spool when you put it away. Notch the legs of the spool to take the cord ends wherever they come.—W. G. Tilsher, San Gabriel, Calif.

Pipe Cleaner Makes Flux Brush

A SHORT length of pipe cleaner inserted in X" copper tubing is a handy, disposable brush for applying acid flux to soldering work. Bend the tubing at one end to provide a loop for hanging it up.

Which Woodworking Square?

FRAMING SQUARE

All these straightedges have an angle. One or more of them may be just the ticket for your job.

MITER SQUARE

NE of the four common woodworking squares undoubtedly hangs over your workbench. But is it the right one for the jobs that you usually do? Before you decide, let's consider all the time-saving chores that you can do with a try, miter,

Try square. One of the most familiar of all tools, this one enables you to scribe a square cut on a board, check its surface for warping, and test right-angle corners or joints. It usually comes in four sizes—ranging from 6" to 12". Blades are marked on both sides in %" divisions.

Miter square. This is a close relative of the try square. A 45'

COMBINATION

SQUARE

Using the Try Square

USED AS A STRAIGHTEDGE, a square detects warping. Press edge of blade firmly against the surface. A sliver of light showing between blade and board indicates a curve in the wood.

right-angle cuts, is a job that can be done with any square. The try square does little more, but is easy to use, compact, and low priced. You can check the squareness of board edges (above), or press the handle against an edge and test a right-angle cut at the end of a board.

Using the Miter Square

45° SLOPE on the handle of a miter square adds mitering to the tricks that you can do with a try square. The combination square has a similar slope on the handle for marking miter cuts.

94 POPULAR SCIENCE

slope on the blade end of the handle, instead of a right angle, is the only difference. You can slide it along the edge of a board and mark off miter cuts, or check those already made. Like any straightedge, the miter square will detect warping. Sizes and markings are like those of the try square.

Combination square. This jack-of-alljobs will square and miter or will double
as a marking gauge, depth gauge, level,
plumb or straightedge. Blades usually
come 9" or 12" long, with their edges
divided into "", "", or "" intervals.
The more expensive machinist's jobs
come in a 4" to 24" range and are made
to more exacting standards for metalworking. You can use them for woodworking, too.

Steel square. This is a big one—made for big jobs. A 24" body and 16" tongue handle layout and checking on the heaviest lumber. If you tackle a garage roof or a house gable, the rafter version will do most of your arithmetic, too. Tables on the face simplify marking length and angles of cut for each kind of rafter in a variety of roof styles.

Other tables on this square help you work out board feet measurements, lay out eight-sided figures, and size common braces. There are simpler versions, called carpenter's squares, that omit the rafter tables—and cost less. You can get almost any combination of tables you might

Using the Combination Square

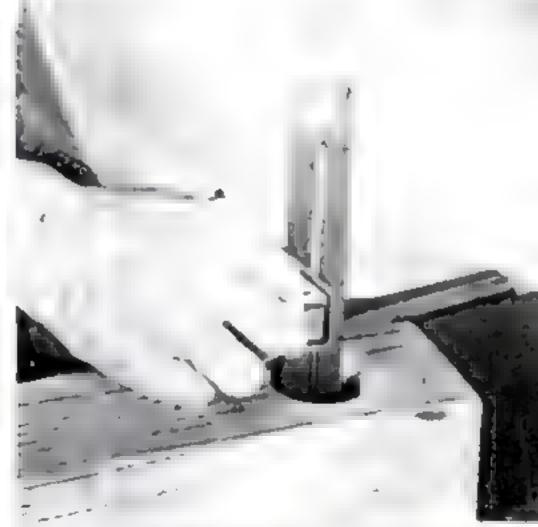

AS A MARKING GAUGE, a combination square will easily mark even long boards to width. Set the adjustable handle, then hold a pencil against the blade end as you slide the square along the edge of the board.

CHECK RIGHT-ANGLE JOINTS with a combination square by setting the handle at one end of the blade. Light showing between blade and board indicates that this joint is out of square.

MARKING PLUMS LINES on a wall, plumbing stude and leveling an auger bit for horizontal drilling are jobs for a combination square. A level in the bandle makes them possible.

GAUGE HOLE DEPTH by resting the blade end on the bottom and sliding the handle down until flush with top of hole You can then read its depth directly from the blade markings.

Using the Framing Square

LAY OUT BIG BOARDS with a steel square. For accuracy, hold the square on edge and pencil right next to the markings. Start measuring from the 1" mark, as comer may be worn round.

want on a steel square. Adding a square or two to your tool collection is not a big investment. All but the large steel squares cost less than \$5. The fanciest steel square costs less than \$10.

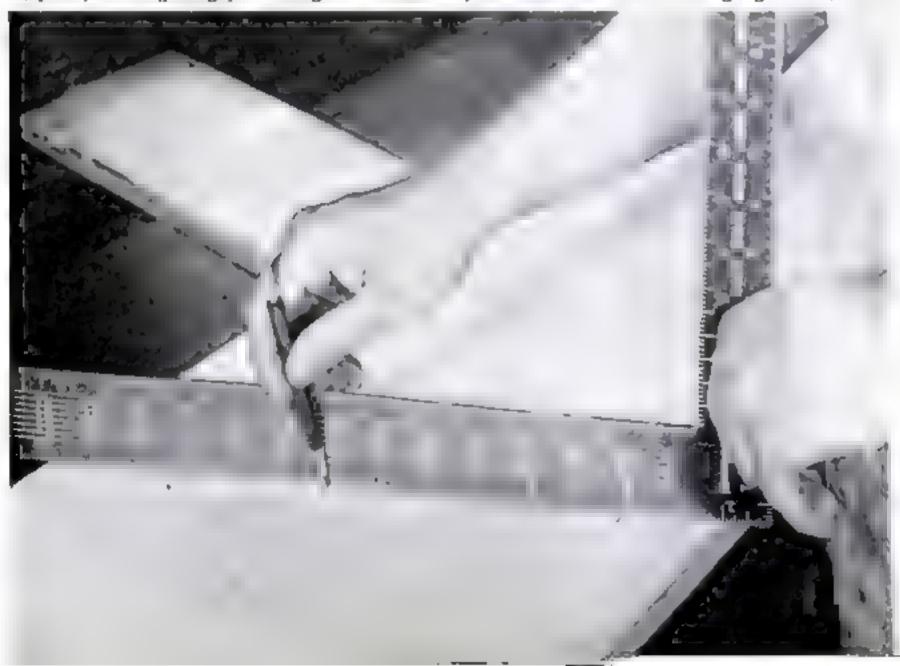

The cost of wood spoiled on a single fair-sized job can top the cost of any good square. Having the right one could save you money.—Edwin M. Love.

ROOF RAFTERS are laid out with a rafter square and very little arithmetic. Tables give length of common, hip and valley, and jack rafters. Square also marks the proper end cuts.

DIVIDE A BOARD into equal strips by inclining a square, or straightedge, at an angle to include

as many equal divisions between the edges as you want. Then mark and gauge them. END

4 Steps in Renewing a Book Cover

THE more useful a book is, the faster it shows symptoms of old age: torn back, bent corners, scuffed edges. To give an old favorite new life, buy a roll

of cloth adhesive tape at a stationery store Choose a width that will cover the back of the book and extend at least "" onto each cover. Use it as below.

1 CENTER THE BACK of the book on a strip of tape that overlaps it %" at each end. Roll it on lightly to simplify later steps. Trim frayed threads off first to make a neater job.

2 MAKE TWO CUTS in the end pieces. Press one outside strip in place. Then fold the center strip inside the back, on itself. Finally, press the other outside strip onto the cover.

3 Smooth edges of tape with your thumb where creasing pulls it loose. Smooth the back on firmly now, too.

4 CUT CORNER GUARDS by halving squares of tape.
4 Press on a triangle to overlap a corner by ½".

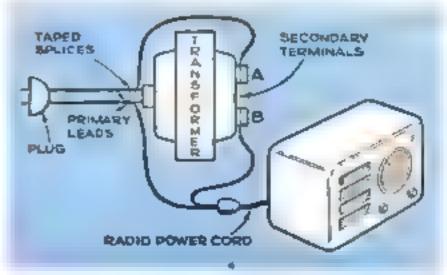

Make two cuts, each in line with an edge of the book cover and to within ½" of it. Fold center flap first.

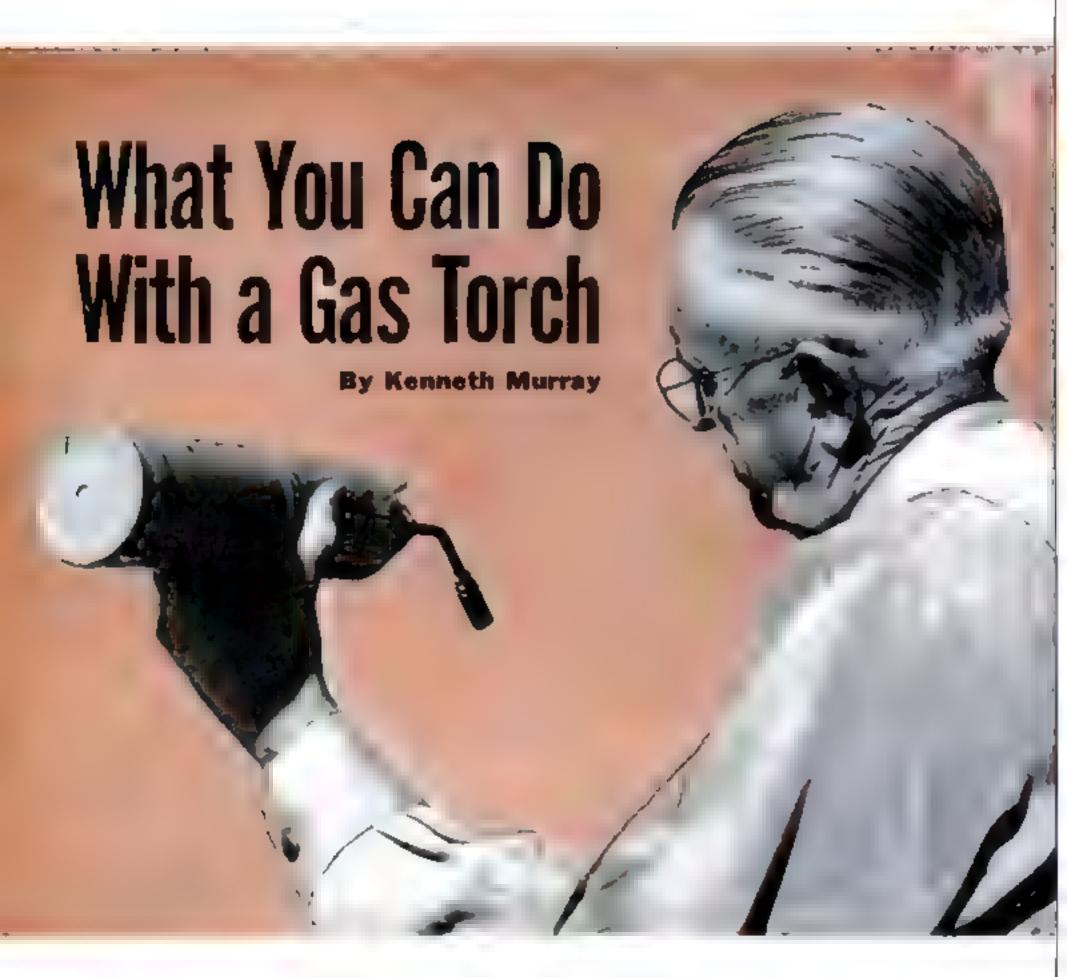

How to Boost Radio Reception

Where line voltage is low, you may be able to improve radio reception with a filament or doorbell transformer.

Connect the transformer in the line as shown in the diagram at the right. Then try it. If voltage is decreased instead of being boosted, reverse the connections A and B.

Do not use this circuit for hi-fi outfits, TV sets or other appliances which draw more than the rated transformer wattage.

ABOUT the only problem when you use a gas torch is figuring out what it can't do. These small, inexpensive propane burners will handle a range of chores extending from heavy soldering to some of the oddest odd jobs that you'll ever find around your home.

The torches are self-contained and self-pressurized, so there's no pumping or priming to fuss with. They are available at hardware stores for about \$5 to \$7. To fire one up, you turn a knob and light a match. When one tank is empty, you throw it away and hook on a refill that costs about \$2.

Two standard burner tips give you a broad flame for general heating or a

slim pencil point for fine work. You can also buy accessory tips or make up your own to do many special jobs.

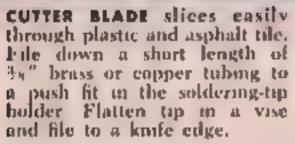

By regulating the torch's fuel flow, you can adjust the flame temperature from a mild "stand-by" heat to a tornd 2,300 degrees. It will take on easily such high-temperature jobs as brazing and silver soldering.

Handy on picnics. A torch is safe to carry along with you in your car, if you are careful to keep the fuel valve tightly closed. It will quickly start picnic fires when the wood is wet, cook food, and help you to make roadside repairs.

If your blacktop driveway kicks up a bole, just heat the dislodged material

Special burner tips that you can make

SPREADER TIP is made of tubing in same was as knife blade at left. Bend a small flat portion on the end and you can 'iron" together cracks in toys and utensils that are made of heat-softened thermoplastic.

for VERY FINE SOLDERING, as in repairing delicate jewelry, try an oil-can spout fitted into an ordinary burner. To remove the spout from the screw ring, heat until solder runs, then push the spout out free.

These are special tips that you can buy

SOLDERING TIP speeds work on large metal areas, like this dustpan, that tend to diffuse heat from ordinary irons so that the solder doesn't flow evenly. Soldering this thin strip on the pan's edge to make it sweep up durt better is easily done by adjusting the torch's fuel flow so that it gives intense beat.

FLAME SPREADER heats broad areas, like the backs of these asphalt tiles. Soften tiles slightly before installation and they will be flatter. To remove a worn or broken one, warm the face to loosen the adhesive and you can then pry it out easily. If the tile has lifted or buckled, heat the surface and press it back in place.

A gas torch does many chores around the home

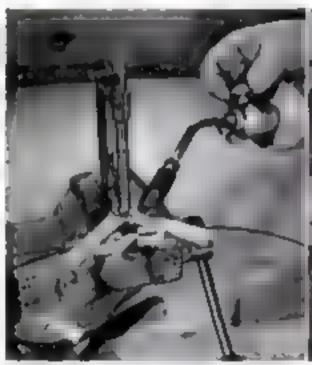

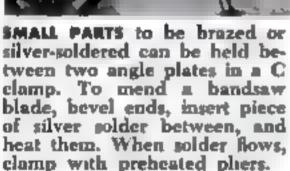

oth GLAZING PUTTY peels off neatly with blade if you soften it first. Keep the pencil flame aimed directly at the head, away from the glass and wood, and move it along steadily. The clean, dry surface that's left is easy to put fresh putty on.

warm to the touch, and the compound will flow more easily, especially outdoors in cold weather. The soft calking will penetrate line cracks better, then staten up quickly as soon as it cools on the work

removed with the homemade spreader, a flattened % " tube inserted in the soldering holder. Iron a moist piece of cotton flamel over the dent until it sizzles. The steam will swell the wood fibers back to normal.

Use it for these unusual jobs in your shop

stick addresive used to fasten sanding disks to a wheel will flow on smoothly without lumps if you first warm the metal plate with the torch's flame spreader. Use it also to heat worn disks so that you will be able to peel them off easily.

YOU CAN BEND thin pieces of wood this way without a costly steam chamber. Wrap the wood strips with soaking-wet cloth and play the flame on the cloth to produce steam. Slowly bend to the desired shape, and then clamp the pieces in place.

For your car, too

YOU CAN CLEAN SPARK PLUGS quickly by burning off the carbon deposits first. Use the concentrated pencil-flame burner aimed at the electrodes. When the parts turn a grayish color, scrub off the ash with a wire brush. Keep the flame away from porcelain parts, which may crack under the heat.

200 POPULAR SCIENCE

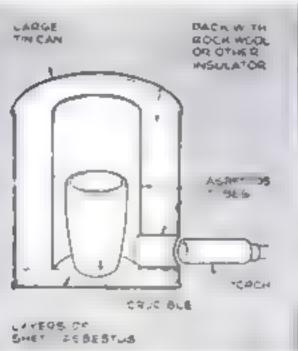

YOU CAN BAKE OUTDOORS at home or on camping trips with this \$3 portable oven and torch setup. Block the oven up on bricks or stones and prop the torch with wire or rocks so that it can't roll. For the best heat, use the flame-spreader accessory and direct it at the deflector plate on the bottom of the oven. Put a piece of ashestos sheet over the table.

when house lights go out, or on a camping trip, try this for emergency illumination. The a 12-cent Coleman Grade A mantle over the pencil-flame burner and burn it off with a match before lighting the torch. It will, give you about 200 foot-candles of light—enough for a small room. Be sure to place it out of children's reach and where it can't tip over.

charring wood for a novel decorative finish is done quickly and evenly with the flame-spreader attachment. To leave unburned designs, paste on templates cut from ashestos sheet. Use clear varnish or lacquer for a high-luster finish.

larger-diameter tube set vertically inside the can.

TIN-CAN FURNACE lets you melt and alloy small quantities of brass, bronze, copper, aluminum and other metals without expensive equipment. Use a wide, squat can, like those that coffee or short ening come in, and line the bottom with several layers of asbestos sheet, as shown in the sketch. Bun a short asbestos tube through the side of the can, just large enough to let you slip in the torch's burner. Adjust the tip so that it just enters the

and tamp it back in. If you need to split stone, heat a line around the break point, whack it with a sledge hammer, and the pieces will part neatly.

Safety rules. The main thing to remember is that you are working with fire—and hot fire at that. Never put a burning torch where it can be touched.

tipped or tripped over by children or others. And never leave a burning torch—shut it off and place the still-hot burner where it can't be reached until you return. If you prop it up, make sure that it can't slip. If you work close to wood or other flammable materials, slip a sheet of asbestos in between for protection, END

Pipe Cleaner Anchors Screw

RESET a wood screw by plugging the oversize hole with a glue-coated pipe cleaner. Insert the cleaner and chip it flush with the hole. If necessary, use more than one.

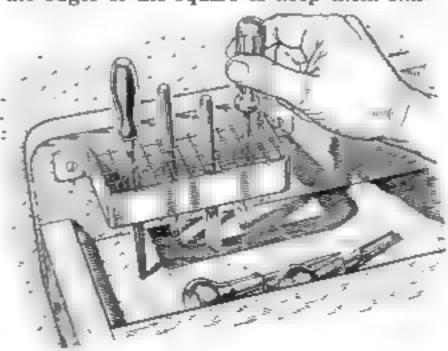

Hardware Cloth Holds Tools

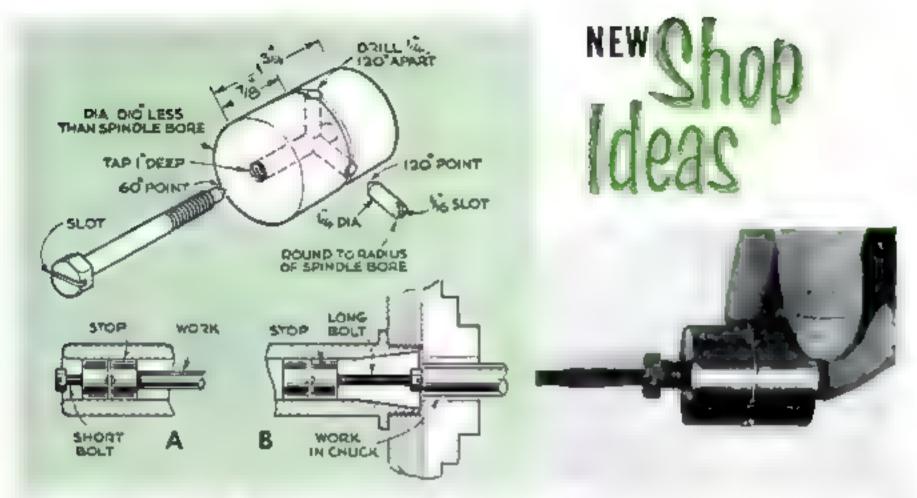

SMALL tools can be kept handy in a rack like this on the backboard of a workbench. Bend the frame from an inch-wide strip of 18-gauge sheet metal. Cut two pieces of %"- or %"-mesh hardware cloth. Solder one to the top edge and one to the bottom of the frame, making sure that the meshes match.

Soldering Iron Carries Rest

A square of asbestos cemented on the shank of a soldering iron will let you rest the hot iron on any surface. Tape or shellac the edges of the square to keep them stiff.

Stop Locates Lathe Work. This spindle stop will locate successive workpieces all exactly alike in the lathe. It can be locked at either the nose or the outboard end in a matter of seconds.

Turn and groove a 1%" length of bar stock as in the drawing. Tap a %" or %" hole drilled 1" deep from one end. Use the chuck jaws to scribe three lines 120° apart across the turned groove.

Drill three %" radial holes at these locations through to the tapped hole. From %" drill rod, make three pins as in the drawing. Bend a ring of piano wire into a circle

Tool for Engine Finish. This spotting tool cuts its own leather pads from old machine belts or shoe-repair scraps. Turn it from drill rod, bore the big end, and turn the 60° angle to form a sharp edge.

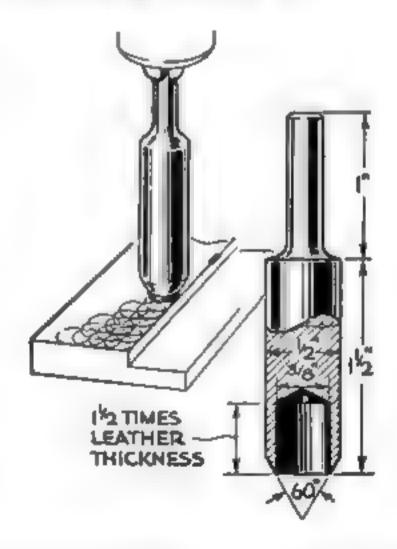

Place the leather on a wooden surface. Using the tool as a punch, cut out a leather disk. Pick it out and cut another. Leaving this in, push the first one back; it will project about halfway. Apply medium lapping compound sparingly to the work. Spot in a straight line, overlapping each spot half its diameter. Rinse in kerosene.—Randolph Lucas, Richmond, Va.

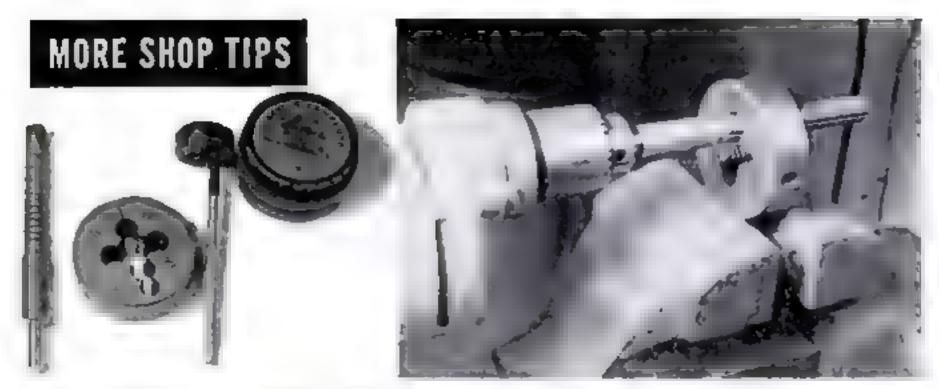

How to Renew Knurling Tools. When packed with metal particles, knurling tools cannot produce good knurls. Soak in lacquer thanner for half an hour and brush or blow them clean. Re-oil before use.—C. H. Hubachek, East Haven, Conn.

to fit tightly into the groove and the pin slots. Snap it on to retain the pins when the stop is not in the lathe spindle.

On the threaded end of a cap screw that fits the tapped hole, turn or grind a 60° point. Stot the head to fit a big screwdriver. Tightening the bolt will force the pins out against the spindle wall. Use a short bolt for locking the stop in the outer end to suit long work as at A. For short work, use a bolt long enough to permit seating the stop where the spindle bore becomes parallel back of the taper, as at B in the drawing.—

Phil McCafferty, Stanwood, Jowa.

How to Resharpen Dies. Worn button dies can be reconditioned with a lap turned in an electric drill. Either a standard adjustable-sleeve lap or a homemade one can be used.

For the latter, turn brass, copper or soft steel to the size of the chip-clearance holes in the dies. Form helical grooves by cutting coarse-pitch right- and left-hand screw threads in the lathe. Then split the lap lengthwise. Spring the ends apart to a tight fit. Charge heavily with rather coarse compound. Work the lap back and forth as it turns in the die. When finished, wash the die in kerosene or fuel oil to remove all compound.—H. J. Gerber, Stillwater, Okla.

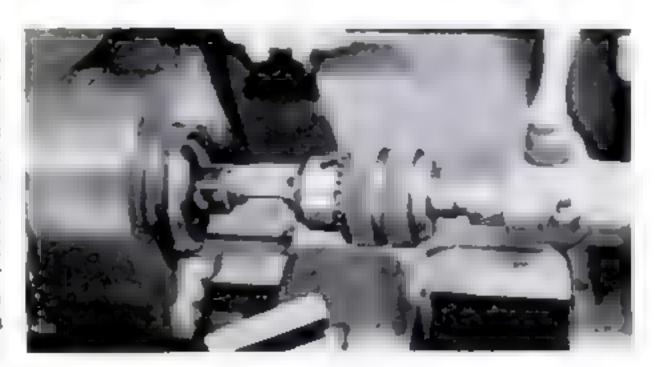

OLD WORK

Punch Transfers Holes. Laying out centers from holes is easily and accurately done with this transfer punch. The tapered body is set into the hole, the collar slid down onto the surrounding surface, and the punch struck. Its mark will be accurately centered under the hole.

Bore the collar to a good finish, and turn the body a close sliding fit in it. The outside, tapered end, and bore should all be machined at one chucking to insure concentracity. The center punch should be hardened. Dimensioned as shown, the device can be used in holes from %" to 1%" in diameter. For smaller ones, reduce the diameter but not the length of the parts.—C. W. Woodson, East Aurora, N. Y.

Ball Cutter for Boring.

For increasing the bore in a gear hub to fit a %" shaft, I mounted a ball cutter in the lathe as shown in the photo at right. It did the job in one pass. The tailstock must of course be accurately aligned for such a job, and the work well centered, or the cutter will bore an oversized hole.—John Tavian, Mentone, Calif.

Squeeze Bottle Squirts Plaster into Wall Cracks

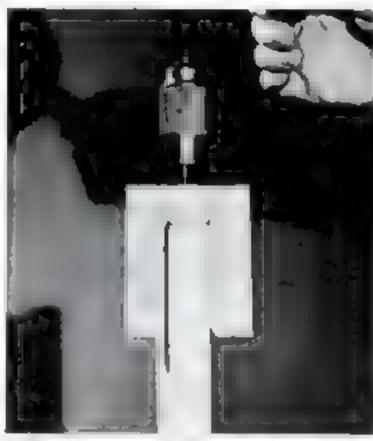

A soft-plastic ketchup or mustard dispenser is perfect for applying small amounts of plaster or cement. Squeeze it and the pointed spout will fill cracks, wallboard joints or crevices around door and window frames. If you want to increase the flow, cut the spout down. The material can be washed out.—E. P. Graff, Ridgewood, N.J.

Rolling Car Mixes the Paint

The next time you buy paint, make the stirring easier by letting your car do most of the work. Put the unopened cans in a large carton in the trunk where they can roll around as you drive. Keep them in the car until you are ready to start your painting job.—Bill Copeland, Sarasota, Fla.

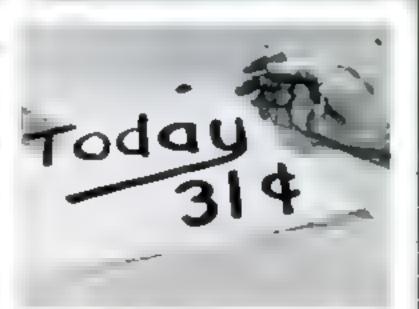

DO IT THE EASY WAY

TO KEEP THE DRILL SQUARE when making a hole in the end of a board, slip on a U-shaped guide. Make it from wood scraps.

DROP A SMALL PART? Place a flashlight on the floor. Look for the part's shadow.

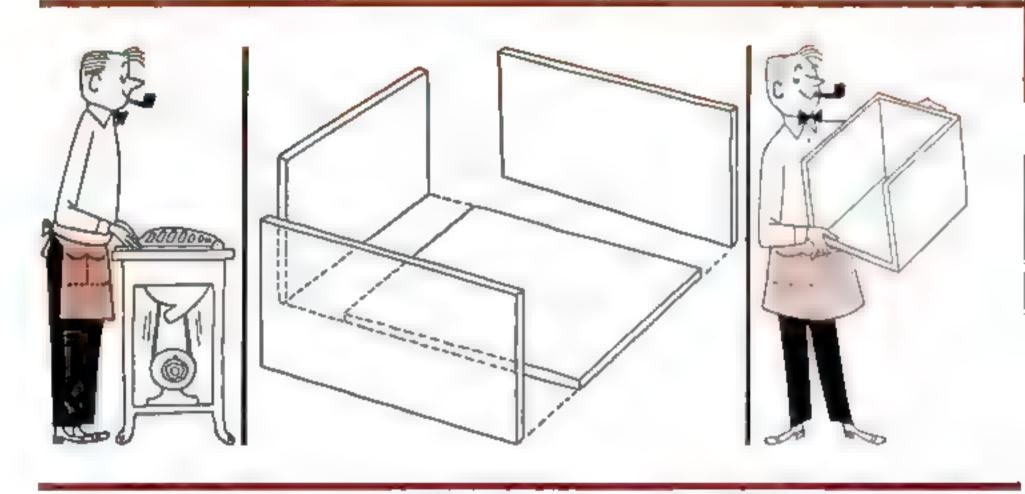

DON'T WASTE TIME cleaning a good brush if you do small lettering jobs daily. Use a cotton-tipped swab. Then discard it.

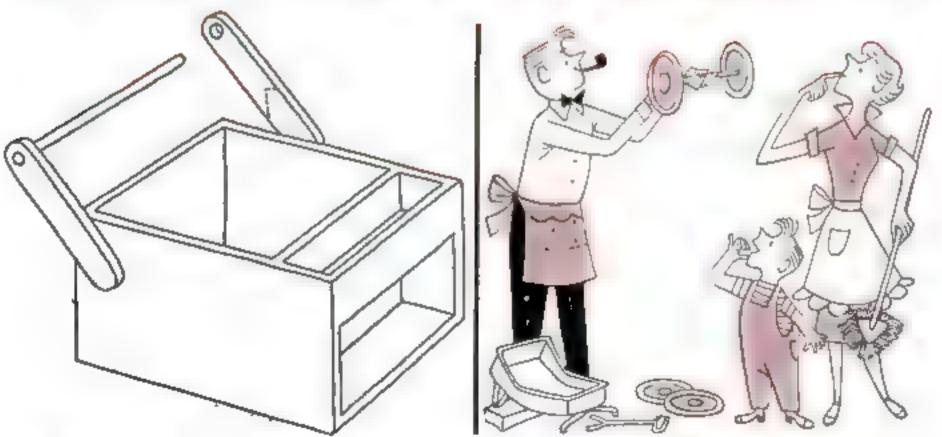

A CARPENTER'S TRICK will help you drive nails into hardwood. Lubricate them with wax crammed into a handle hole.

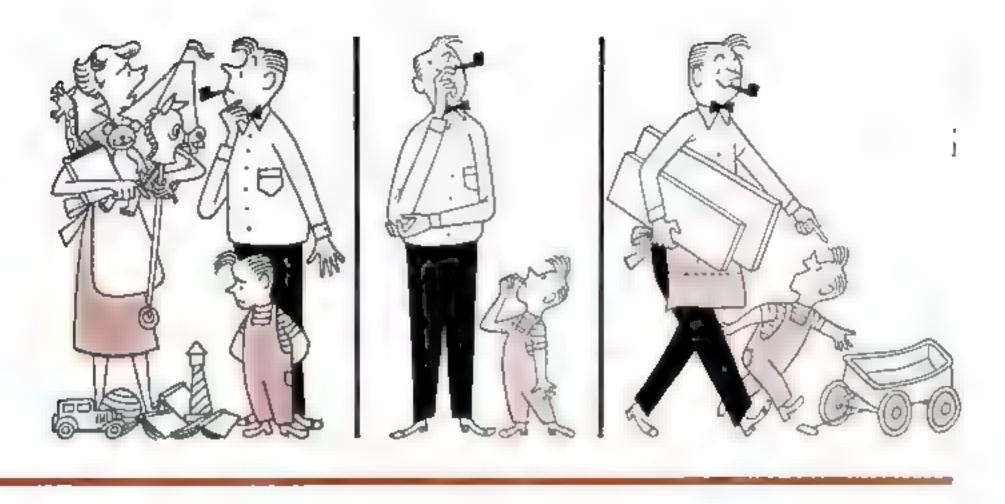

Wordless Workshop

Garden Rake Does Snow Duty

Convented to a snow scraper, your rake becomes a year-round tool. Cut a hole in a rectangle of sheet metal and push it over the handle. Using large washers on the prongs, bolt it on.—R. E. McCune, Harvard, Mass.

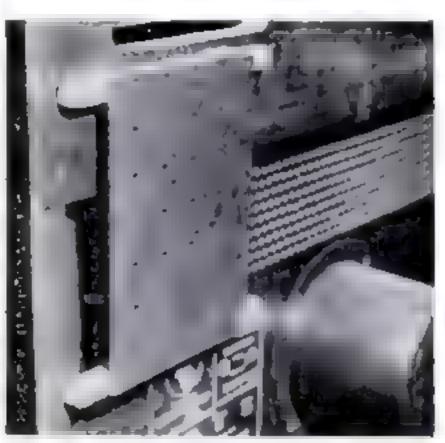

Clothespin Rack Hangs Skirts

You will be a hero to the women in your family if you make a set of hangers that will keep skirts from becoming wrinkled. Cut dowels to required length, drill for hooks cut from wire hangers, and mount clothespins, driving nails through the springs.

Remove Your Watch First

BE SURE to take off your wrist watch when you work with paint remover. Spattering will pit a plastic crystal badly—as the home handy man above discovered too late

TV Slot Holds Program Notes

You can keep TV magazines in a pocket on the back of your set. Screw a piece of material such as Masonite Peg-Board to two strips of wood and glue it on. The perforated board will not cut off air.

Tip on Treating a Typewriter

If you store a portable typewriter in its normal writing position, its delicate parts are less likely to shift out of alignment.

A Modern Fireplace Grate

1 THREE SUB-ASSEMBLIES shaped like the letter H are welded together first. Notice how bracks are used here to huld the parts.

2 A DIAGONAL CROSSPIECE ties the three sub-assemblies together. End welds have already been made and clamps removed.

3 AS FINAL STEP, a leg and crosspiece are added to each end of grate. The pantograph-shaped ussembly is now ready for painting.

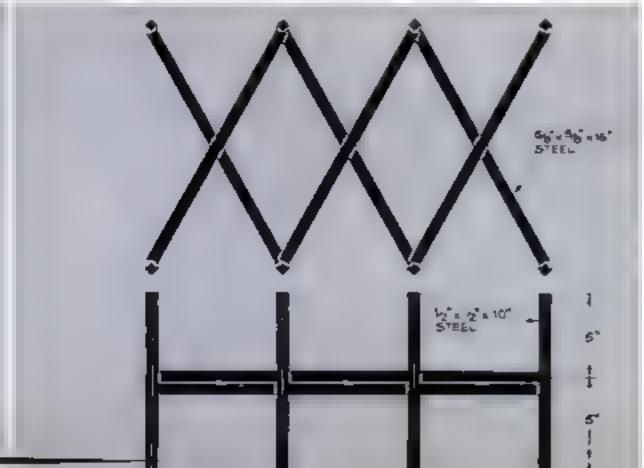

By John Rogers

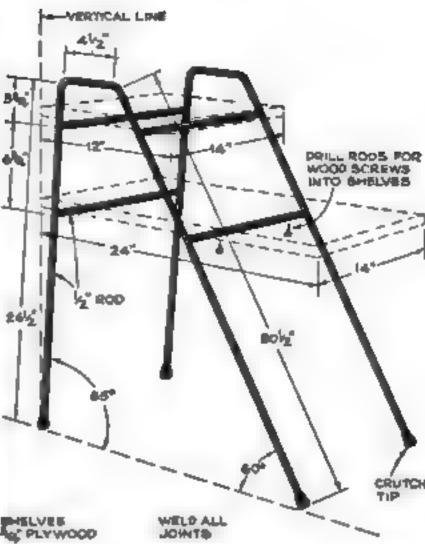

WELDING is required to make this modern fireplace grate, but you don't have to own a welding outfit. You can hacksaw the parts to length and have the rest of the job done at a local welding shop for two or three dollars.

Mild-steel bar stock is used. You need eight 10" lengths of 5"-by-5" stock for legs, six 16" lengths of 3"-by-3" stock for crosspieces. After the welding is completed, finish the job by giving the grate a coat of flat black paint

SHAPED LIKE A PANTOGRAPH, the grate is designed to substitute for traditional androns.

Modern Table Made from Birch and Wrought Iron

HERE's a clean-cut blend of natural wood and wrought iron that fits in well with both modern and traditional furniture. The sides of the end table are A-shaped frames bent from %" steel rod. You can form the angles in a vise with a hammer, pulling on the legs for leverage.

If equipment isn't available to weld the crossbars, you can have the job done inexpensively. Welding is preferable to bolts that may permit wobble. I used X" birch plywood for the shelves, trimmed at the edges by

glung on 1/32"-by-3/4" solid-birch strips. Score the plywood heavily with a sharp knife before sawing and you'll find that the face veneer won't chip.

My favorite finish—by which I mean easy to apply—is two coats of floor sealer, buffed smooth between coats with steel wool. Brush on the second coat liberally, wait five to 10 minutes, then rub vigorously with a rag soaked in turpentine. When dry, rub to a deep luster with fine steel wool and paste wax.—Frank E. Price, Reno, Nev.

Hardboard Chute Carries Kitchen Trash to Basement Bin

A CHUTE leading from the kitchen to a basement trash container will save the house-wife many steps. Such a chute can often be built in a stairwell as shown below. In this

case, the chute was made of tempered hardboard stiffened with 1"-by-2" wood strips at the corners. The wood door was housed in a framework of 1"-by-3" lumber.

How to Make Traverse Rods

PLYWOOD CARRIERS slide smoothly along a wood bar to open and close these window drapes in the author's home. The cornice was hung from a one-by-two cleat on the ceiling.

from Wood

By Edwin M. Love

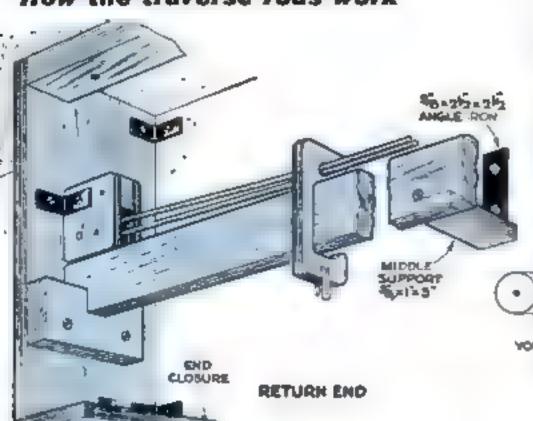

op exasperating faults. My wife complained that the carrier slides snagged on the rod joints and jammed when the drapery hooks jumped out, which is often. Finally, when the draw cords of an 18-foot window broke as she tugged at them, she ordered me to fix them.

I was fed up with stretching my arms and craning my neck, trying to thread drapery hooks into carrier eyes. Repeating the cycle by installing new commercial rods did not appeal to me. Then came an inspiration. Why not build new rods in my shop? Since wood slides nicely on wood, I could make the carriers and rods of wood. I did, and my creation works like a charm. I am now convinced that it will be a long time before my spouse is irked again by balky, snagging drapes.

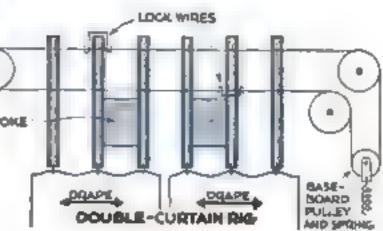

Hardware for the job consisted of small steel awning pulleys from a dime store, plus nails, screws, stove bolts, and angle irons. Plywood went into the carriers and brackets, but '" hardboard was chosen for the cornice fronts because there's no grain for the paint to raise.

Building the rods involved a production run in carriers. The other work was simple

How the traverse rods work

single on bottle curtains can be installed on this homemade wooden traverse rod, the double ones meeting at, and drawing away from, the middle of the window expanse. Notice that the two carriers at the leading edge of each drape are yoked together with a wooden block and that the inner member of the double carrier is wired securely to the draw cord.

carpentry. Since my windows are high, the fronts of the cornices were hung from a ceiling cleat, the ends extending over the end brackets to hide the joints. Wooden blocks, bored and countersunk, were glued %" below the upper edge of the hardboard facings, forestalling interference with the cleat. The blocks, coated

with white plastic glue, were rubbed onto the back and left to dry. Screws were then run through the blocks into the ceiling cleat.

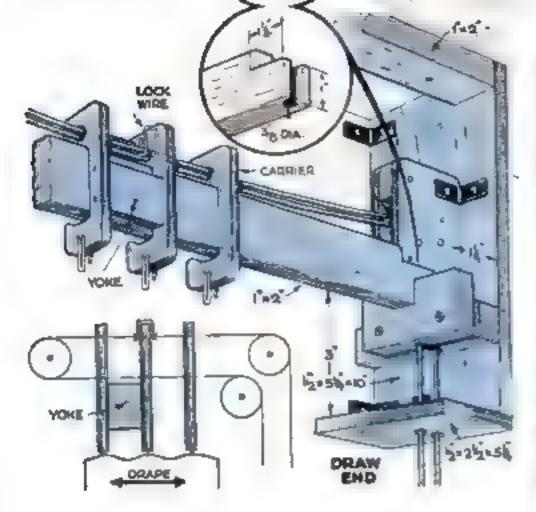

Installation pointers to keep in mind as you work follow:

Make the carriers on a mass production basis, that is, cut all the blanks first.

How you make the carriers

STACK SIX BLANKS in an assembling jig made by nailing two pieces of plywood to a squared piece of two-by-four. The blanks are 2"-by-3¾" pieces of ¼" plywood. Cut a tracing pattern from cardboard (or make up one carrier), drop it on top of the pad of blanks and trace around it. Then, holding the pad firmly in the jig, drive two four-penny finishing nails into the center (waste) opening. Remove the pad from the jig, take it to the drill press and drill the holes

Then assemble them into pads of six blanks each as shown in the photos. You then can drill all the holes of a particular size in the carrier pads at one time without changing bits.

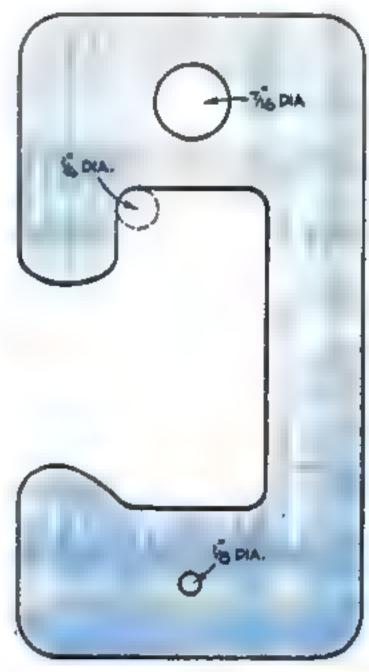

When the carriers have been sanded, suspend each one from a wire hook and dip it into a can of shellae thinned

shown on the pattern. After sanding all edges smooth and rounding them, cut out the center of the carriers with a 1/4" band or scroll saw. The carriers will drop apart as sawing is finished. If you want a super job, sand the center edges.

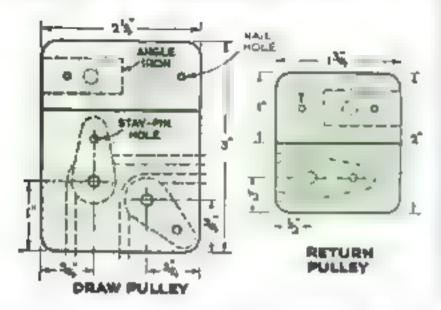

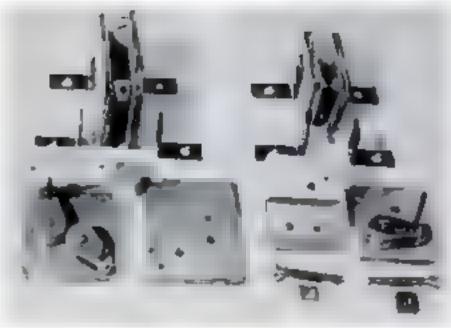

THREAD PULL CORD through the pulleys with a piece of wire solder. Tie a string to loop in solder, and tie the string to the end of cord.

ACTUAL SIZE

How you assemble brackets

THREE AWNING PULLEYS are needed for each traverse rod installation, two for the draw end, one for the return. Assemble the pulleys as shown between sheets of '4" plywood,

enough to run off freely. Hang it on a cord to dry.

Dimension the wood blocks that yoke together the leading pair of carriers on each drape to suit the pleats.

Attach the pulley brackets and rod supports to the cornice ends and screw the latter to the wall, using plaster anchors where necessary.

After shellacking the one-by-two bar, rub the top with paraffin. For smoother action also coat the inner edges of each of the carriers.

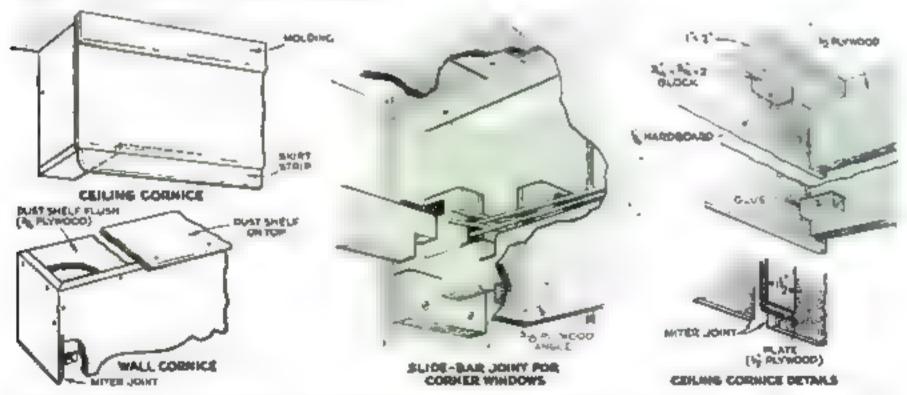

using spacing blocks equal in thickness to the pulley shells. Cut off the projecting nail points and rivet the ends. Attach the angle irons with small bolts run through the bracket.

To thread the draw cord through the pulleys, bend a loop in the end of a piece of wire solder, tie a string to the loop and hammer the loop flat. The the string to the end of the draw cord and shove the solder through the pulley.

For single drapes leave the cord ends hanging; for a double draw, pass the cord around a baseboard pulley mounted on a spring.

It is customary to place draw cords at the right end of a window, or at the outer ends of corner windows.

How you put up the cornice

TWO METHODS OF MAKING A CORNICE are suggested here—hanging it from a ceiling cleat or bracketing it to the wall with a dust shelf on top. If the ceiling is irregular and the top edge of the cornice board doesn't fit against it, use a molding strip. If more drape coverage is needed, add a skirt strip inside the cornice. When the cornice is faced with hardboard,

glue it to blocks spaced every 18" for a neat installation. Should wide windows require splicing the board, miter the joining ends and glue a plywood plate behind the joint. Box-joint in the center drawing above shows how the author held together two cornice boards in a free-hanging joint to hide the pulleys attached to his corner installation.

Towel Quiets Electric Shaver Used by Early-Morning Riser

The buzzing of an electric shaver early in the morning or late at night may disturb a light sleeper. When you need to get out of the house before the family arises, wrap a small towel or facecloth around the shaver. It will cut the noise.

Restoring Lock Tension

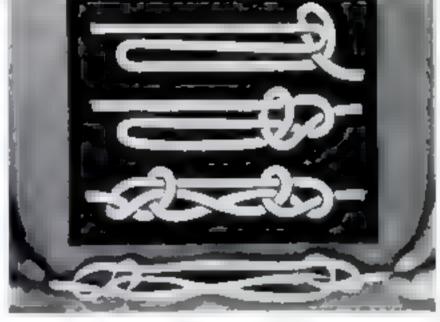

Friction catches on downswinging doors, such as those on cabinets, clothes chutes and the like, sometimes wear smooth. One or two chromed, roundheaded thumbtacks stuck in the edge of the door often will restore tension.

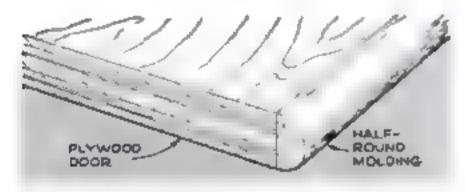

Bumpers Hold Logs in Barrow

HAULING logs in wholesale lots is no problem for Clyde W. Bailey of Wellsboro, Pa. By adding bumpers to his wheelbarrow, he can stack logs much higher. And they are bumpers: the end sections of an old Chevyy bumper. The four bolts holding them are the original ones from the car.

Navy Hitch Shortens Cord

You can shorten electric cords, rope or lines without cutting them if you use a Navy hitch. The illustrations above show the steps. If you want to shorten the line only temporarily, don't pass the ends through the end loops; then the whole knot can be shaken loose when desired.

Molding Finishes Plywood Edge

To install a plywood sliding door on a closet, I worked out an easy finish for the vertical edges. By gluing and nailing on %" half-round molding, I got a workmanlike job.—N. J. Mettelka, Manitowood, Wiz.

Cement Holds Eyeglass Screws

THE hinge pins in eyeglass frames have a tendency to work loose. To anchor a pin, fill the sockets with rubber cement, and screw the pin in tight. If it's ever necessary, you can easily remove the cement.

10 Extra Uses

By William B. Eagan

CONCRETE blocks left over from a building job can be put to surprising uses. These illustrations show 10 that I have discovered.

Suppose, for instance, that you want to warm cans of roofing cement for use. Soak some cotton waste in kerosene, stuff it into the opening of a block, touch a match to it (Fig. 1) and you'll have all the heat you need. Set the block up on bricks or stones if necessary to insure a draft of air for combustion. You might find other uses for such a little stove, too, around a home or summer cottage.

Heating a soldering iron outdoors with a blowtorch is easy when done as shown in Fig. 2. Rest the iron in an opening of a block and turn on the torch.

Fishermen or boatmen will appreciate the idea of using a block for an anchor. Use a star drill to make a hole in the end of the block. Then insert a heavy eyebolt as shown in Fig. 3. A nut threaded on the bolt secures it.

Quite often in construction a portable drawing board must be used at the job site for laying out details or studying prints. A drawing board of the type shown in Fig. 4 can be built with a concrete or cinder block, two-by-fours, and a small sheet of %" plywood. Attach

A15.5

ANGLES

for Concrete Blocks

the plywood to the uprights with two angle irons. Wedge the ends of the twoby-fours into the end block openings.

A good dirt tamper is often needed around a home. A block will provide one. Insert a length of I" or 1%" pipe, with a tee screwed on one end, into the middle opening of the block (Fig. 5). Then fill all three openings with cement.

A workman whom I hired to install drain tile used sections of concrete blocks to support the tile. Each block was split through the center of each opening (Fig. 6) and the pieces made a cradle base for the tile to rest on.

The housewife will appreciate the two items illustrated in Fig. 7 and Fig. 8. Painted white, filled with soil and buried halfway in the ground, blocks will serve as handsome flower planters. Use them for boundary markers along driveways and walks and around ponds. Because of their weight, they make useful and novel umbrella holders when painted and decorated. Felt glued to the bottom of the block will prevent marring the floor.

Children will like a small garden seat that doesn't tip over easily. Wedge a wooden plug into each of the three openings of a concrete block. Then screw on a plywood seat and sides as in Fig. 9.

If you want to put a sign on your property, try using a concrete or cinder

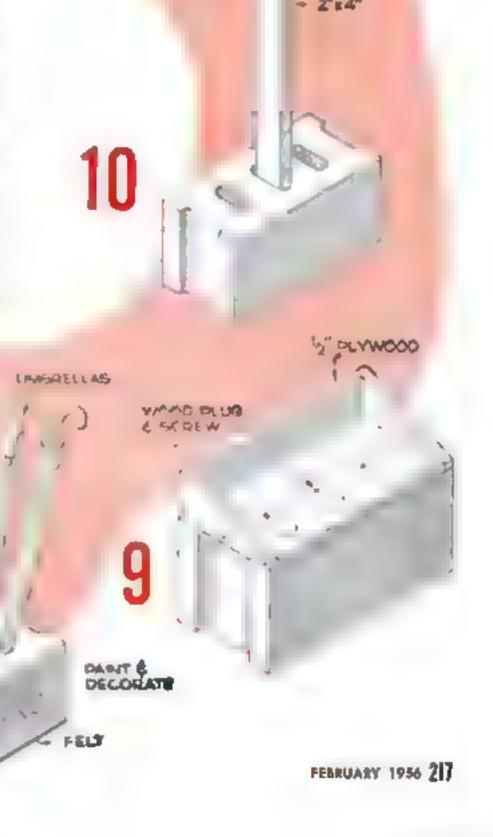

PAINT WHITE

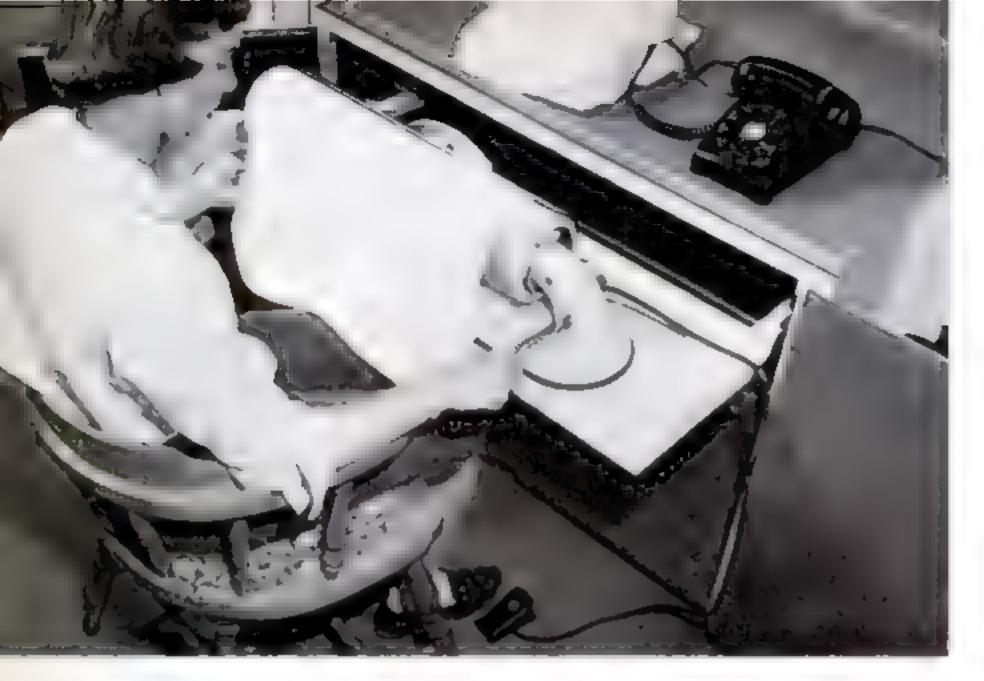

block as its base, Fig. 10. It will save you the trouble of sharpening and driving the sign post into the ground.

And here are two more ideas:

For a quick and easy outdoor fireplace, place two blocks on the ground with a grille across them.

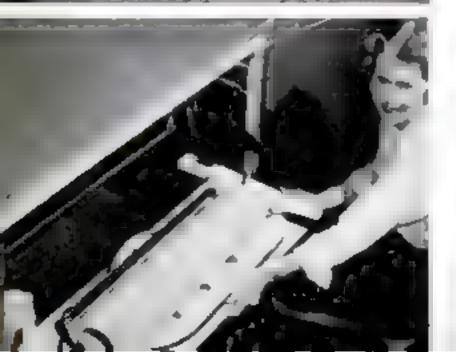

If you have a brook to bridge, place concrete-block piers on the banks and use cleated two-by-fours to span them.

How I Installed a Pop-Up Ironer

By Irving Lowell

THE gift of a portable ironer delighted my wife, but it gave me a problem. Where could I place the new appliance in an already crowded kitchen?

It would be very convenient, my wife suggested, if she could handle the mangle like an office typewriter—store it in a base cabinet, swing it out and up to table height. Could I do it? I could—and did. A counterbalanced mechanism for a swing-up typewriter platform from an office-supply house did the trick

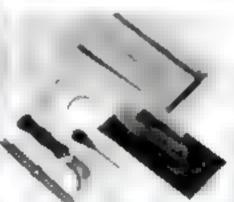

After deciding to locate the mangle in a double-door base cabinet, I removed the center stile, nailed it to one of the doors so that they would meet, and took out the shelves.

Only one change was required in the swingup mechanism. The mounting brackets at each end had to be set farther apart so that they could be attached inside the ends of the cabinet. A welder cut the two horizontal bars and welded in bar stock to lengthen them. The regular typewriter platform was too short, so I made a longer one from 1%" wood.

New for the Handy Man

1. Linoleum Made Easy to Install. Linoleum strips 24" wide and a special tool kit enable you to tackle a floor job that is often left to a professional. Only the ends of these linoleum sheets need to be cut to size,

the long edges come trimmed and matched to give a seamless appearance. There are 15 patterns in light and standard thicknesses and in various lengths.

2. Folding Table Legs
Come in Kit. Screwon metal legs are now
available in the foldaway bridge-table type.
They are strong enough
to support Ping-pong
and picnic-table tops
that you want to store
flat when not in use.

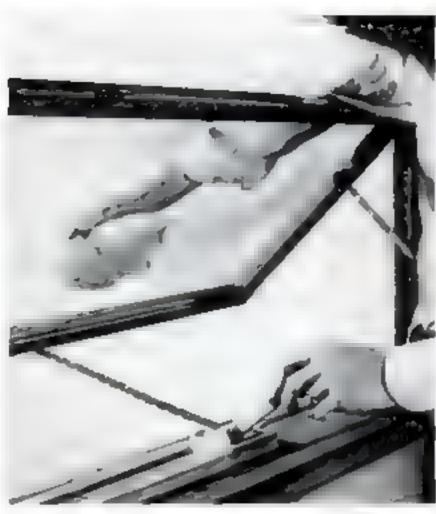

3. Hopper Spreads Mortar Fast and Level. With one filling of this spreader you can lay two even strips of mortar (left) on the edges of 25 concrete blocks. It will also butter the ends (center) individually or in

groups. Thickness of the mortar is adjusted by a height gauge on one end, resulting in a clean job (right). The steel hopper has two wooden handles so that it can be lifted or pulled in either direction over the blocks.

More Handy Man Tips

4. Chain Opens and Closes Window. A flexible crank chain that becomes rigid when extended opens or closes an awning-type window as chain is cranked out or back into its sill housing. Provided with the mechanism is a set of hinges that slide in grooves to angle the window from the top.

5. Three Ladders Combined in One. This magnesium ladder is a lightweight extension ladder when you swing its hinged back frame up and lock it at 180°, or a stepladder when it is swung down and held with cross braces. The back telescopes so that you can set the ladder up on steps.

6. Earphone Finds Water Leaks. You don't have to be a Sherlock Holmes to locate a leaking water pipe. A sensitive earphone held against a pipe spots it for you by transmitting the sound to your ear through a lead button in the diaphragm.

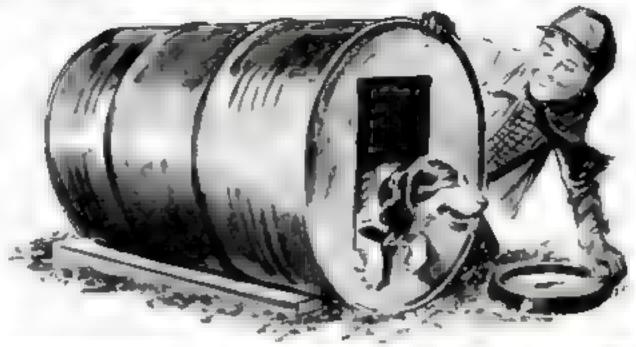

7. Floor Tiles Resemble Boards. Asphalt tiles 4" wide by 24" long simulating oak, walnut, maple or driftwood are being used to produce the effect of wood flooring. You lay them as ordinary tiles on wood or concrete in random-plank or parquet designs.

You Can Make a Snug Canine Quonset from an Oil Drum

A GASOLINE drum with a rectangular hole cut in one end makes a cozy, weathertight doghouse. Cold-chisel the doorway out and file or bend the metal to elimmate ragged edges.

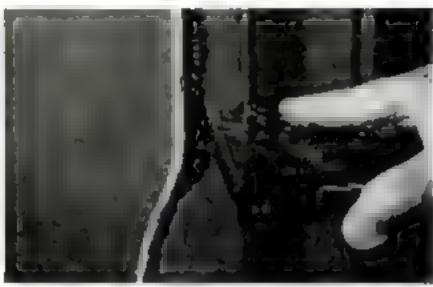

Use plenty of straw bedding to keep the new tenant warm and comfortable.—E. V. Reyner, Townsend, Mont.

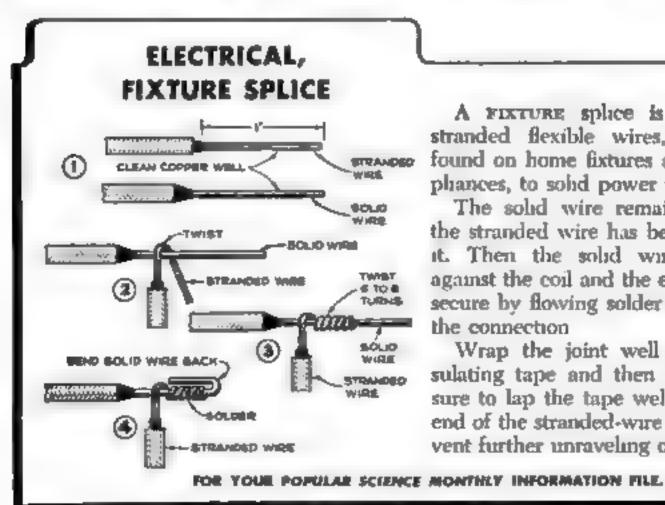

Lining Strengthens Envelope

A CHEESECLOTH lining lessens the chance of coms or other small objects breaking through a mailing envelope. Apply thin coating of glue on the inside with a flat stick; then use the stick to push the material in place. Mark the envelope "hand stamp."

Ciothesiine is Weatherstrip

A PIECE of clothesline can be used as substitute weatherstripping Press it firmly into place and tack or staple it to the frame of the window or door. Then apply a coat of paint. Such line might also be used in some circumstances as a substitute for calking.

A FIXTURE splice is used to attach stranded flexible wires, such as those found on home fixtures and electrical apphances, to solid power wires.

The solid wire remains straight until the stranded wire has been coiled around it. Then the solid wire is bent back against the coil and the entire splice made secure by flowing solder over and around the connection

Wrap the joint well with rubber insulating tape and then friction tape. Be sure to lap the tape well over the frayed end of the stranded-wire insulation to prevent further unraveling of the covering.

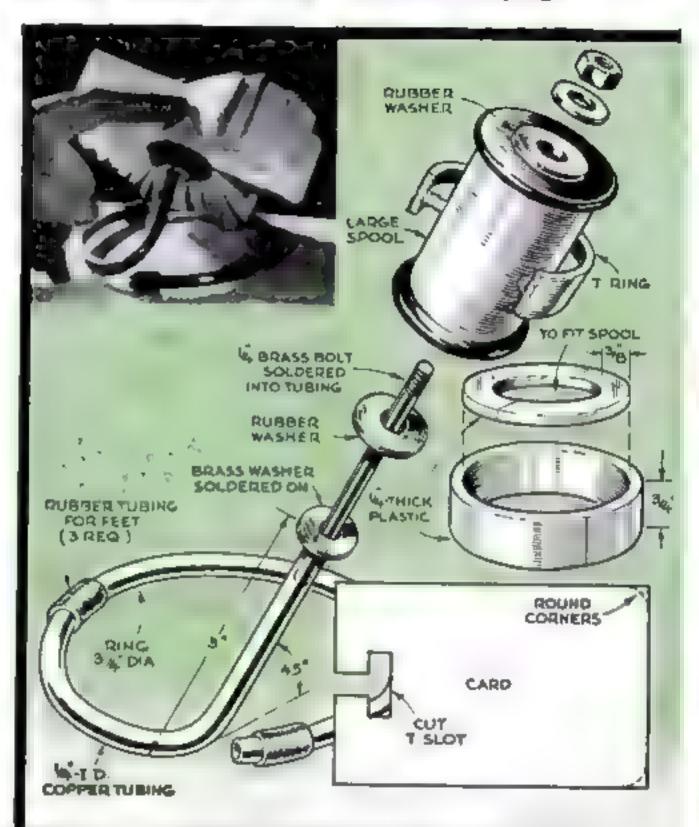

Items You Can Build for the Home 'Office'

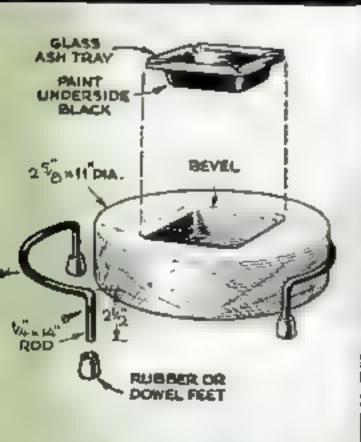

quickly by spinning the rotary file at right. The hub is a large carpet-thread spool that revolves on a bolt. The bolt is soldered into a ring-shaped stand made of copper tubing that cocks the file at a convenient angle.

To hold the cards to the hub, build up a T-shaped ring from strips of clear plastic (you can get small semps at hobby shops for little or nothing). Soften the strips in an oven, curve them to fit the spool snugly, and fasten them together with plastic glue.

From standard 3"-by-5" index eards ent smaller eards to fit the width of the spool, with a matching T-shaped slot in one end so that they'll hook over the ring on the hub. Make up a set of slightly longer cards and letter the protruding ends to mark the alphabetical divisions. By turning the axle nut, you can adjust the spool's tension between the rubber washers.—

J. M. Finn, Pittstown, N. J.

2 A big ash tray can be made by bandsawing or turning a base from a piece of three-by-twelve. Cut a recess in the center for an inexpensive glass tray available at dime stores. Sand the wood

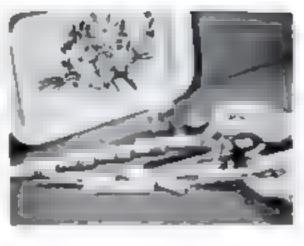

well and finish with stain and lacquer.

Form the legs from two 14" lengths of %" rod, shaping them to fit the curve of the wood disk. Bend down 2%" lengths at 90° on each end, and drill the rod for small wood screws to fasten the legs to the bowl.

222 POPULAR SCIENCE

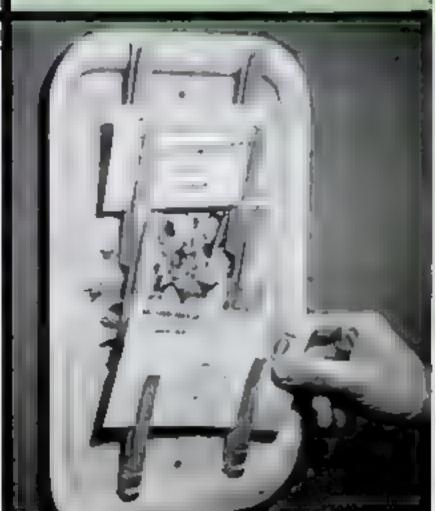

Wall file sorts mail, bills, messages and other important papers where you can see and get at them easily. For a kitchen nook use an inexpensive metal tray like this for a decorative backing. For a

den or shop, make a plaque from wood or hardboard.

For the clips, glue up two rows of square wood clothespins, overlapping the ends about 2". Set the rows 3%" apart and screw them to the tray or backing panel.—Walter E. Burton, Akron, Ohio

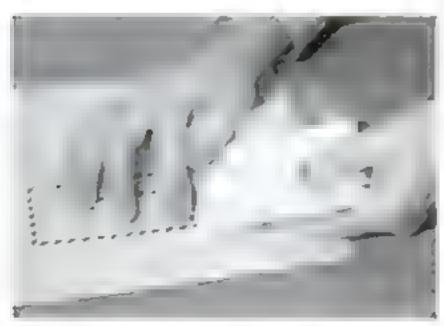

Gun Muzzles Kept Dust-Free

A FINGER out from a glove and slopped over the muzzle of a gun keeps out dust when the gun is stored upright in a rack.

Sticking an Unstuck Corner

IF THE corner of a label, stamp or pastedon photo or chipping won't stick, moisten the gummed flap of an envelope and supply adhesive by pressing the unstuck corner on it as illustrated in the photo above. Then draw the envelope flap out quickly.

Felt Pad Does the Sticky Work

CEMENT or tape a piece of felt to the bottom of a mucilage bottle. It will absorb excess mucilage and make a fine smoothing pad for paper after glue is applied.—Glen F. Stilwell, Manhattan Beach, Calif

Light Cord Anchors Projector

A SLIDE viewer or other electrical equipment is in danger of being yanked off a table by anyone tripping over the electric cord. You can prevent this by wrapping the cord a few turns around the leg of the table to arrest the pull on the appliance.

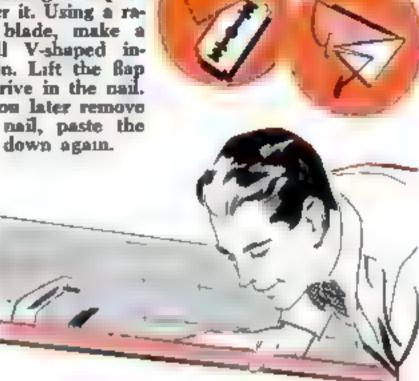

Please turn the page for more home tips

sink and fill pail holes, sand, and

stain or paint.

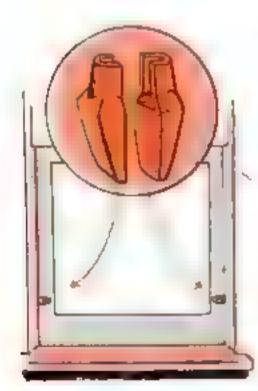

HIDE A NAIL HOLE in a papered wall by precutting a flap to cover it. Using a razor blade, make a small V-shaped incision. Lift the Sap to drive in the pail. If you later remove the nail, paste the flap down again.

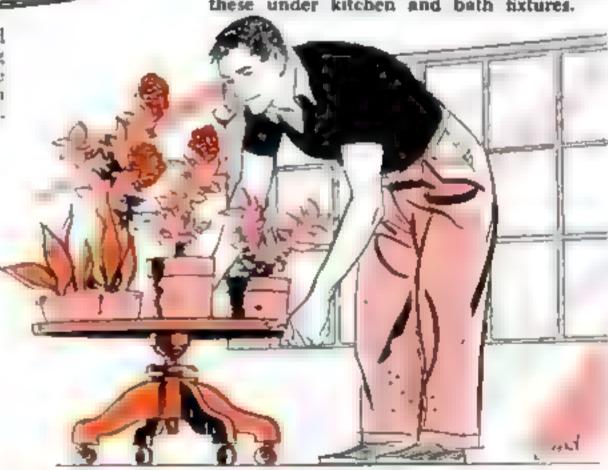

SHOPPING FOR FAUCET WASHERS will be easier the next time you need them if you note the sizes on slips of paper and tape these under kitchen and both fixtures.

CATCH THE DUST when you sand or scrape a floor by hanging damp sheets over the doors. The sheets will keep fine dust from floating into adjoining rooms.

RUBBER WEDGES made by slicing a slip-on eraser in half will stop irritating rattles, such as a loose window, or level small household appliances. Eraser halves glued at intervals along the stop strip of a banging door will deaden the noise.

A PLANT TABLE made from a revolving office chair simplifies sunning house plants on all sides. Remove the chair back and attach a rounded piece of plywood to the seat. Cut this bigger than the seat to provide room for more pots. Finish to suit your taste,

A BROKEN POT-LID KNOS can be replaced by a wooden spool held on with a bolt, nut and washer. Peen the end of the bolt so the nut will stay tight and the knob secure.

secret of success in radio building is to make your mistakes on scratch paper. The first of four major steps is to plan the layout of major parts on paper (above), following the diagram. This also belps you determine chassis size.

Are you looking for an interesting new hobby? Here's what you should know about

Getting Started in Radio Building

By J. W. Rocke Jr.

Building small radios is a rewarding hobby. Cetting started, however, may be difficult because you don't know the little points that writers of manuals and how-to articles often take for granted.

You'll need to learn, first of all, how to understand schematic diagrams. The diagram of the AC-DC superheterodyne receiver on the following page is your key to this understanding. (The diagram is for study only and is not intended for use in building a set.)

Plan the chassis arrangement. The all-important first step in working from a diagram is to fix the location of each major part. You can do this by placing the parts on a piece of wrapping paper.

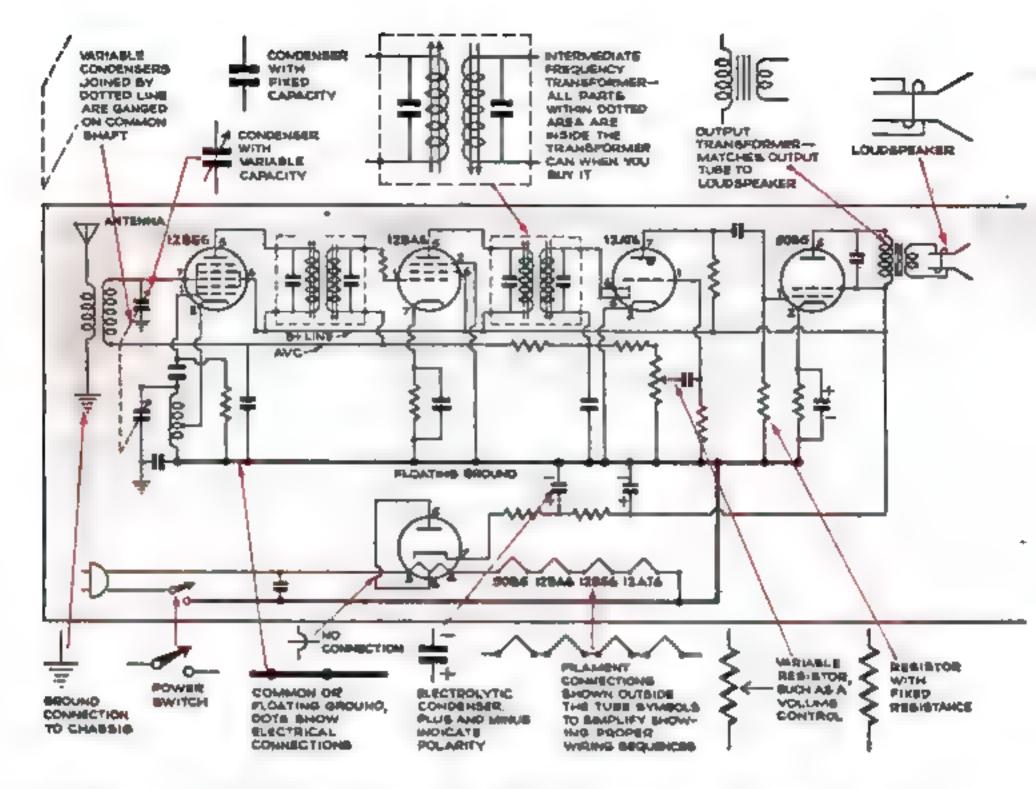

It's best to line up tube sockets in the order shown on your schematic diagram. Place the intermediate frequency (IF) transformers between the tubes, as on

the schematic. Locate the volume control and variable condenser where you want these shafts to come through the finished cabinet. Antenna and oscillator coils go in the easiest wiring positions.

Don't bother to find spots for the small parts yet. Small resistors and condensers will usually fit in as you wire.

Convert the schematic diagram into a pictorial, or working, plan by penciling in trial connections between the parts. The idea is to find the most direct and practical wiring plan that will avoid critical wiring mistakes—such as using unusually long IF grid and plate connections. It is usually a good plan to keep the parts in a straight line. Try several arrangements until you find one that will give the most direct wiring paths for the critical plate and grid leads.

The chassis. The parts arrangement you decide on will determine both size

and shape of the chassis. On your first attempt it's well to make the radio chassis fairly large for easy wiring. While shortness of plate, grid and B-plus wir-

TILAMENTS
(HEATERS)

full symbol represents the working parts (elements) of a tube. These are connected to pins, identified by number. Find the corresponding numbers on a tube socket by looking at the underside; start counting at the space (or key) and go clockwise to the desired pin.

ing is stressed in radio construction, it doesn't necessarily mean crowding the parts to extremes. Crowding can actually be detrimental.

Before installing tube sockets in the chassis give a little thought to their orientation. If you rotate a socket a quarter or half turn from its random position you can often prevent an awkward wiring situation.

Chassis wiring. Where do you begin wiring the chassis? Might as well start with the filament terminals (or lugs) on the tube sockets. They are good practice for the tougher jobs ahead.

First take a look at the tube symbols on the schematic. Notice that no filaments are drawn inside the circles; they are set off by themselves at the bottom of the schematic, along the power cord. (This is a common practice to simplify diagramming and wiring a set.)

The filaments, unlike other tube elements, do not get involved with the signal; they simply provide a supply of electrons for the tube to use. Follow the schematic wiring order to minimize hum. In an AC-DC set like the one shown, filaments are strung along in series, like the cheaper Christmas-tree lights. (Not all sets have series-wired filaments; in the AC-DC set, series wiring eliminates a power transformer otherwise necessary.)

For best set operation, the other tube elements should be wired into the shortest possible signal path, the way they are usually shown in the schematic.

It's a good idea to wire one section at a time, to prevent mistakes. I have found, however, that wiring critical parts is easier if you make all IF transformer-to-tube connections before adding the required resistors and condensers.

Early in the hookup work you will be looking for spots to make common connections. Your pictorial layout will help by showing up usable parts terminals. You can use soldering lugs on major parts and appropriate tube-socket lugs for most of your common connecting points. But don't tap into a wire running between terminals—it makes a poor mechanical connection that could vibrate loose. If you have a junction that does not come together on a lug, mount a separate terminal strip to provide a tie point.

Soldering wires to common-connection lugs is much easier if you do it only after you're sure no more wires join together at that point. This prevents having to solder a connection more than once.

Using spare parts. Spare-parts boxes and inexpensive surplus parts are invaluable to the experienced radio man but can be a headache to the novice builder. Too often these parts carry no identifying code to show how they should be wired into a circuit. In selecting oscillator, antenna, RF and IF coils, for example, it pays to buy new parts—unless you know for certain the values and terminal connections of the parts in question.

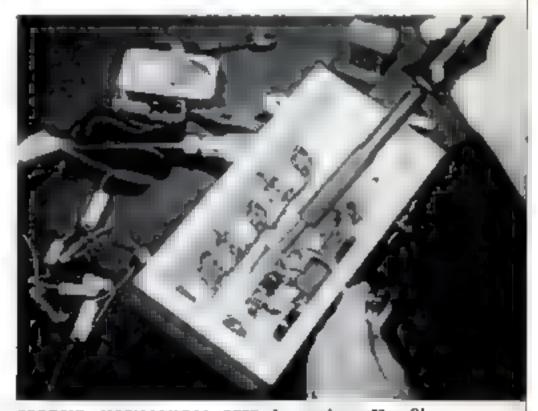

Resistors and fixed condensers carry a color code for ready identification, so they are an asset to any spare-parts box. Unless quite an assortment is at hand,

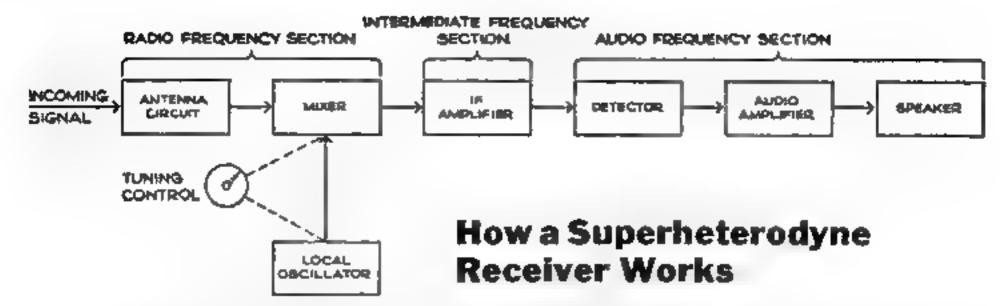

SECOND PLANNING STEP is to pencil trial connections between the parts as they he bottom side-up. Instructions with them identify the terminals. Keep the wiring paths short.

FIRST MECHANICAL STEP is to lay out the chassis and cut holes for the parts. Follow the arrangement made on paper and mount all parts securely before soldering connections.

second mechanical step is wiring. Do filaments first, twisting the leads together where possible. A terminal strip makes a handy mount for power resistor and also provides tie points.

WHEN you tune in a radio station on a superheterodyne receiver, you're actually tuning two circuits in the set simultaneously. A radio-frequency (RF) circuit picks out the signal you want from all those being broadcast. A local oscillator circuit generates a second signal that is 455 kilocycles higher than the broadcast signal.

The two signals meet inside a mixer tube and react with one another to produce an intermediate frequency (455 kc.) signal. This change in the radio-frequency part of the signal does not affect the audio part that contains music or speech

It's the use of a fixed intermediate-frequency (IF) section that explains superhet

popularity. Instead of selecting and amplifying broadcast signals at many radio frequencies, the superhet converts all RF signals to a single frequency (the IF), Interfering signals are blocked in the process and the initial critical amplifying is always done at the same frequency. Key parts can therefore be chosen for best performance at a single frequency.

Now sharper and stronger from its passage through the IF section, the signal is split into its radio- and audio-frequency parts by the detector tube. The RF is discarded and the audio is further strengthened in the audio amplifier. A loudspeaker converts electrical energy into sound.

however, you are not likely to be lucky enough to pick out all the values called for by a specific plan. You can sometimes substitute values near the ones called for, if you don't mind correcting a bad guess now and then.

In selecting a suitable substitute, remember that manufacturers allow a tolerance for small resistors and mica condensers. The average tolerance on these parts is 10 to 20%. For that reason a resistor or condenser having a value close to that called for may work.

Aligning the set. Don't be disappointed if your receiver doesn't work the first time you turn it on. Wiring and assembly may be perfect, but you won't hear a sound unless all major parts function as a team—unless they are in alignment. Once you understand how a superheterodyne receiver works you will see why alignment is so important, and why salvaged parts are poor economy for the beginner.

From the summary above of how a superhet works, it's easy to see why the

values of parts in the set are critical. Antenna and local oscillator circuit parts must team up to produce an unvarying 455 kc. difference. The IF transformers must both be aligned (by means of their tuning slugs) to this intermediate frequency, and they must properly match the other circuit components. Obviously, parts of unknown value are simply an added liability.

To align, or tune, all the RF and IF sections of the set, the novice builder will probably do best to take it to a serviceman who has the equipment for such a job.

Chances are that your first or second home-built set will receive strong local stations—at least if you've selected the major parts from the designer's parts list. New IF coils are aligned by the manufacturer. They should require very little adjustment in the completed receiver, provided the rest of the set is in balance. You can usually improve alignment by following the instructions given with the original diagram.

1 RESTORE GRIPPING POWER to the clamp on a photoflood reflector with heavy rubber bands. Twist them around the clamp arms in place of tubing that is rotted or worn.

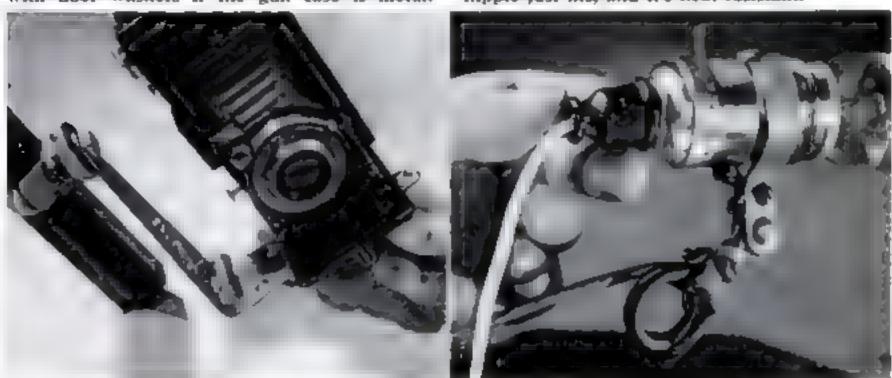

2 ADJUST TRIPOD LEGS easily by alipping tight-fitting crutch tips—with ends cut off—over the knurled locking sleeves. Then the knurle can't dig into your fingers when you loosen a jammed sleeve. Uncut tips on the legends set them for steady shooting.

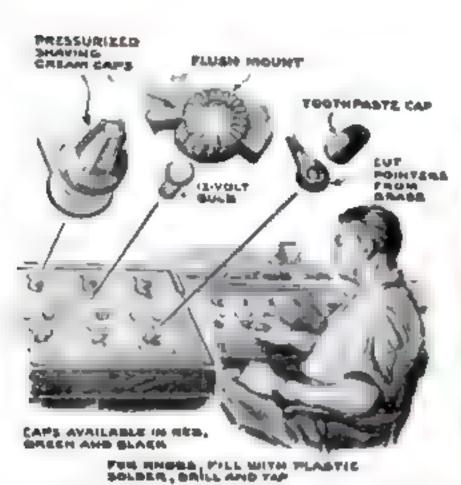

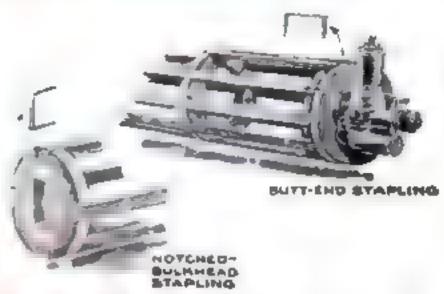

3 AN ADJUSTABLE FLASH-GUN BRACKET can be made from a strap hinge. Stiffen the hinge by hammering the pin ends. Insulate the bracket with fiber washers if the gun case is metal.

4 FRAYED LAMP CORDS can be avoided if you push a rubber nipple over the threaded pipe on a photo-lamp socket. An auto distributor-cap nipple just fits, and it's heat resistant.

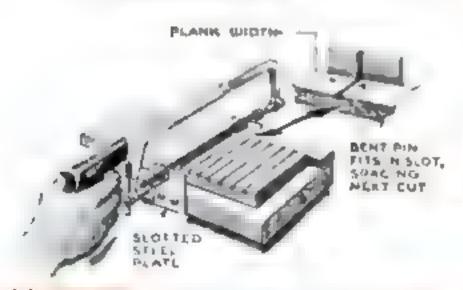

Useful Ideas for the Modelmaker

STAPLES Engine mounts won't tear free from the fuselages of your model planes if, after using cement for assembly, you reinforce all critical joints with staples.

CAPS Don't throw away plastic caps. You can use them for everything from wheels to headlights. On a model railroad control board, they make handsome dials and color signals.

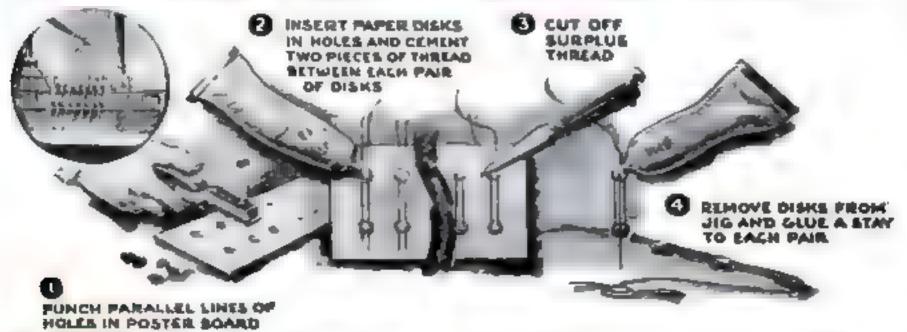

SATURATE FORD
OR THREAD
WITH
ACETATE
CEMENT

APPLY TO I PAILEOARDS AND TRANSOM

PLANKING Here's a handy way to simulate planking on a large model. Make a miter box for your hacksaw. Then lay out the work so that the cuts run with the grain.

SCROLLWORK It takes a clever woodcarver to whittle scrollwork on a ship model. Using thread or cord instead gives professional results in much less time.

DEADEYES Why

Why get the shakes threading deadeyes for a ship model?

Punch them from poster board and the perforated sheet becomes an accurate spacing jug.

Some scrap wood, containers and batteries show

How to Take Water Apart

By Andrew Pfeiffer

mula that nearly everybody knows is H₂O. If you're the Missouri type and want to see for yourself that heavy, wet water is, strangely enough, a combination of two light and dry gases, it is fairly easy to take some water apart. You will get (by volume) two parts of hydrogen gas and one part of oxygen gas—H₂O.

You can take water apart the same way that it was first done 150 years ago by two Englishmen, Nicholson and Carlisle, They connected a battery to two electrodes in water and found that hydrogen bubbled off one electrode and oxygen bubbled off the other.

A convenient rig to

FERRUARY 1956 233

use is a simple one that is described in a book put out by the United Nations Educational, Scientific and Cultural Organization. It is intended to promote scientific training in underdeveloped countries, and it is ideal for quick construction at home. Even youngsters can build it.

What you need. For electricity, an automobile storage battery is fine, but several No. 6 dry cells (1% volts) connected in series will do nicely, too. The electrode tips are bits of a carbon rod pulled out of an old flashlight cell. These are supported on plastic-insulated No. 14 solid-copper wires 9" long. You can scrounge the wire from an odd length of BX or Romex cable. You also need two Fahnestock clips or binding posts.

The water holder is a 24-ounce clearplastic freezer container. You catch the hydrogen and oxygen in test tubes (the glass tubes that toothbrushes and cigars

often come in are okay).

Make the stand from scrap wood, cut as shown in the photograph and assembled with screws. Three of the little wooden blocks position the tank. The other two hold the electrodes and can be marked negative (where hydrogen collects) and positive (where oxygen collects).

Liectrodes. Hacksaw the flashlight cell lengthwise and carefully remove the carbon rod. Cut two X" pieces off the rod, clean them well, and drill a X"-deep hole in the end of each with a No. 52

drill. Do not drill through.

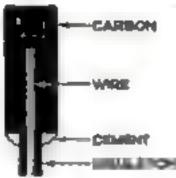

Cut off insulation for "" on one end of each of the electrode wires. Insert this end into the carbon, making sure that the insulation butts against the earbon. Coat the joint with household cement. (The experiment will not work if this is not done carefully.)

Bend the wires to shape and loop their free ends, from which 1" of insulation has been removed, under the screws

holding the connector clips.

The experiment. If you put this all together and start the juice, nothing will happen. Water is a remarkably poor conductor of electricity. But you can

electricity into water, are made from carbon rod of a flashlight battery. Piece of rod, drilled 1/2" with No. 52 drill, is slipped over bared end of wire. Seal the connection as shown in the sketch (left).

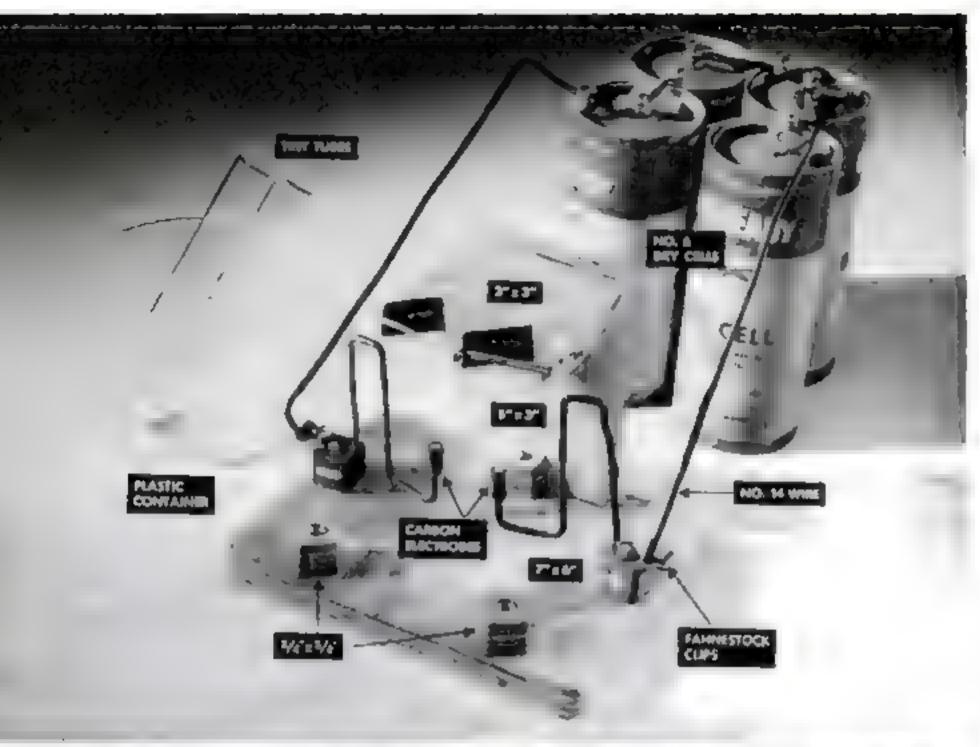

quickly make it conductive by adding some washing soda (three tablespoons

to a quart).

The tank should be filled until the electrodes are submerged \u00e4". Set up the test tubes this way: Pour the soda-andwater solution into each tube until it overflows. Put a square of paper over the tube mouth, invert the tube, submerge the mouth in the tank, let the paper fall away (fish it out later), and carefully slip the tube over the electrode without allowing the mouth to break water. If you do this properly, your tubes will be totally water-filled, without air bubbles that would confuse the results. Rubber bands, looped over brads, hold the tubes in the notches of the stand.

Now you are ready to start perking. Hook the negative battery terminal to the negative electrode, positive terminal to positive electrode.

Almost immediately you will see

opps and thos make apparatus. The stand shown was built of ¾" plywood, but other scrap wood can also be used. Dimensions should be varied to suit the water container.

streams of tiny bubbles rising in each tube. The hydrogen comes off much the faster, making its tube appear milky.

The proof. After a while, you can see that the hydrogen tube (negative) contains approximately twice as much gas as the oxygen tube. Only approximately, because much more oxygen than hydrogen dissolves in the water and disappears from view.

How do you know that it's hydrogen in the negative tube, oxygen in the positive? Test them.

Remove the negative tube from the stand, keeping it inverted and allowing the water to spill out. (Hydrogen, being lighter than air, stays inside the inverted tube.) Bring a flame—a burning soda straw—close to the tube mouth as you turn the tube up. The hydrogen will flow

MINIATURE EXPLOSION proves that larger quantity of gas (from negative electrode) is hydrogen. Hold a small flame near mouth of tube and tilt the tube up. It will pop noisily.

up and out, mixing with air. When the hydrogen-air mixture reaches the flame, you should get a very satisfactory pop!

To check on the oxygen, remove the tube, keeping it inverted and spilling the water. Instead of a flame, use a glowing ember—a pine shver, say. Insert it up into the inverted tube. It should burst into flame when it meets the oxygen.

Okay? Water is H₂O. EN

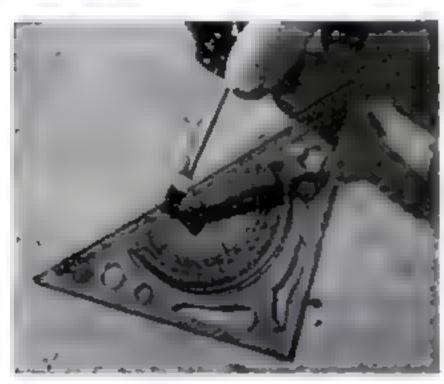

Why Not Save Ice-Cream Sticks for Spreading Glue?

THE flat sticks on which ice cream is frequently sold make good glue spreaders. Have members of your family save them. You can put the sticks to use handily when you are applying thin layers of glue on paper, cardboard, or other surfaces.

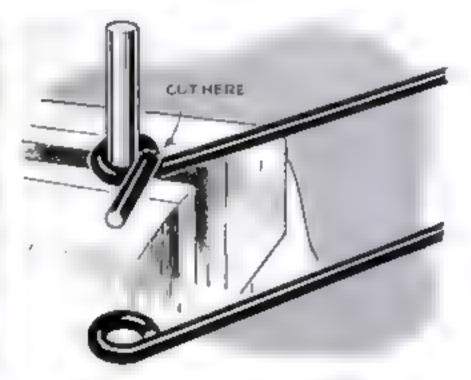

Lead Shot is Mixer

IF you keep a little lead shot in a bottle of white or colored drawing ink, the contents will mix with fewer shakes. The pellets speed up the process.

Adhesive Skidproofs Template

A COATING of rubber cement on the underside of a celluloid or plastic design template keeps it from sliding on the paper. Let the cement dry before using, so that it won't stick tight. Spots of masking tape will do, but rubber cement is transparent.

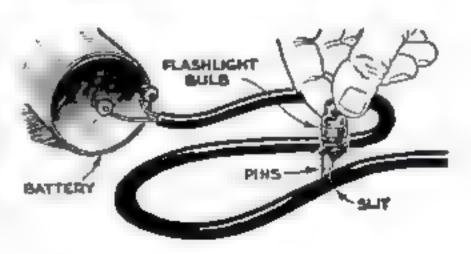

Rod Helps in Looping Wire

FORMING a loop on an end of heavy wire with pliers is a difficult job. It can be made easy if you twist the wire around a steel rod held upright in a vise. Cut off the excess length with a hacksaw and position the loop by gripping it with the pliers.

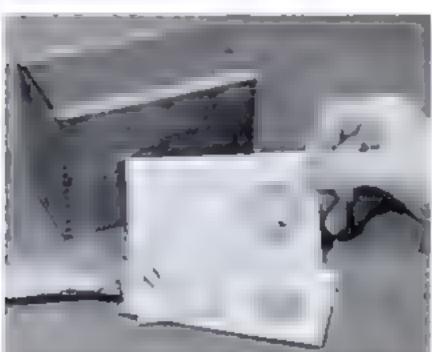

Tester Made from Pins Locates Break in Long Heavy-Duty Cord

Instead of discarding a broken heavy-duty cord, I cut it at the break and had two shorter cords. I located the break by testing at 4' intervals: slitting through the insulation and inserting two common pins in the wires. With one end connected to a dry-cell battery, a 1%-volt flashlight bulb, touched to the pins, would light until the break was reached. Rubber cement and tape restored insulation.—F. V. Betlach, Owatonna, Minn.

Level Is Combined with Straightedge

NEED a long level that will span the forms when you set them up for a concrete sidewalk? Attach a small level to a length of two-by-four for a combination level and straightedge. Bore two holes in the two-by-four to take cord or wire.

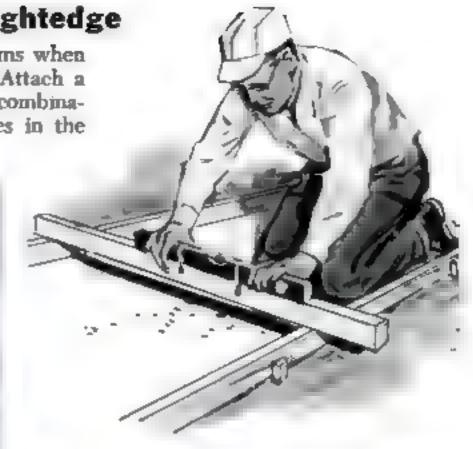

Card File Indexes Spare Parts

Tivy replacement parts can be stored right on their own file card and indexed for ready location when needed. Glue a heavy-cardboard ring to the prepared card, put the parts in, and seal with a transparent disk.

Iron Arm Speeds Riveting

ATTACHING the punch to a bent length of strap iron so that it is suspended over the anvil gives you a third hand when setting rivets. Clamp the arm to the bench, and hold the punch on with rubber bands. Both hands will then be free for the work and hammer, making the job much easier.

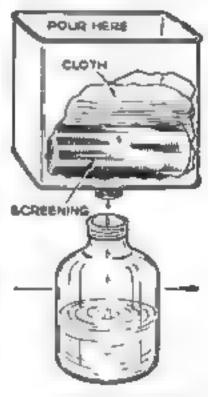

Brush Makes Piggyback Scraper

GLUE a suede shoebrush to the back of a paint scraper to make a work-easing combination tool. A turn of the handle gives you the brush to clear off scrapings.

Tin Can is Strainer and Funnel

A OUART can with a spout, a piece of rolled-up window screening and several thicknesses of cloth will strain paint solvent and other liquids for further use. Cut the bottom out of the can and fit the rolledup screen over the spout end. Place the cloth on top You may have to change the cloth to clean some fluids -C H. Hardy, Los Angeles.

FEBRUARY 1956 237

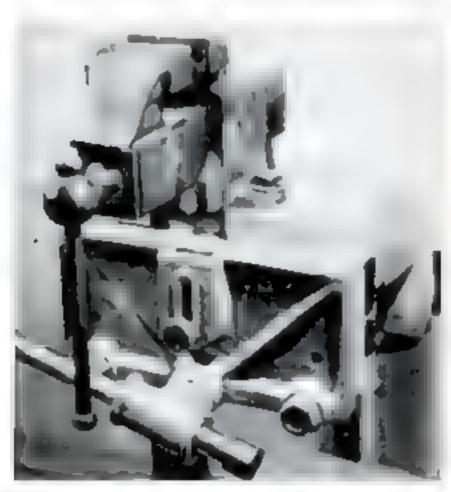

Triangular Sawhorse Sets Up Shop Anywhere You Want It

Titts triangular sawhorse can be taken apart quickly, stored flat, and carried to a job in one hand.

It is made by assembling three frames of 1"-by-5" board 24" long, as indicated in the photos. Attach two loose-pin hinges to each

of the ends. You just pull out the pins to collapse the piece.

When it is set up in U shape with one corner open and a plank on top, you can use it as a scaffold or temporary workbench.—
R. G. Cooper, Trenton, Ontario.

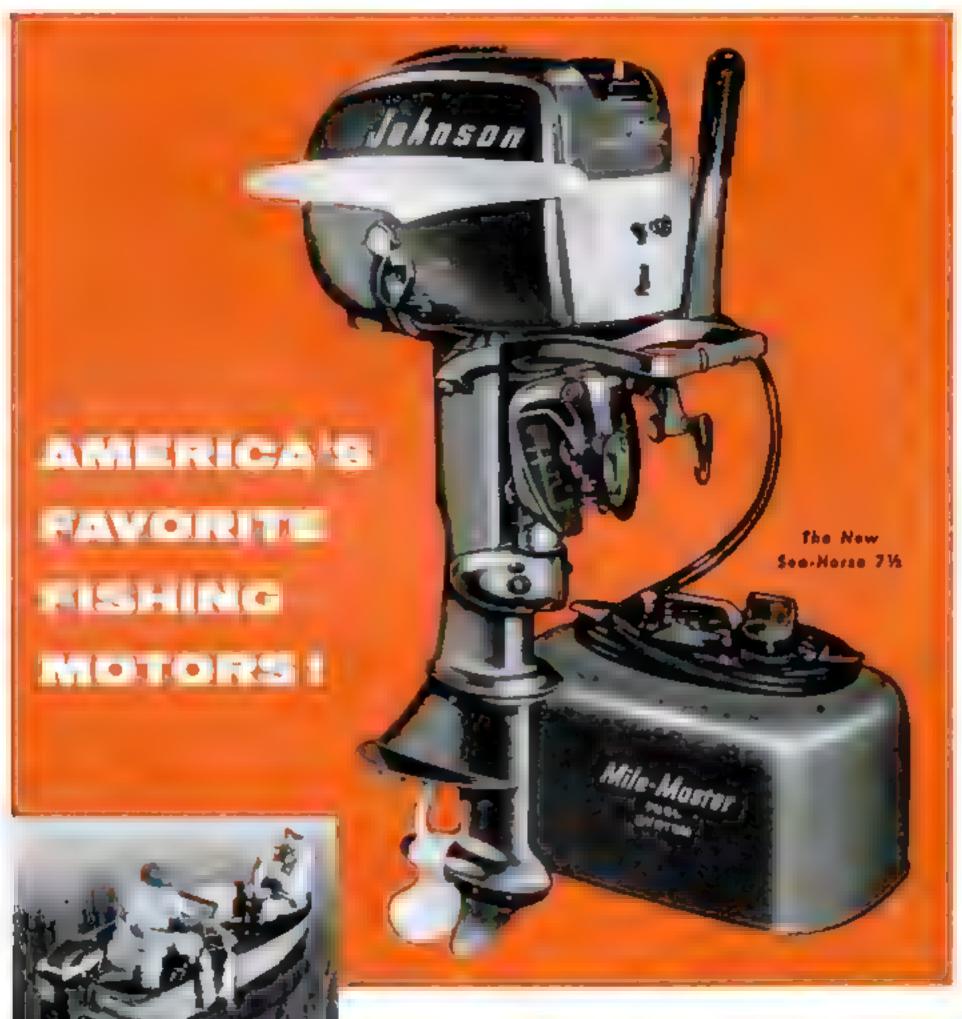

Two Vises Take Space of One

You can use a metal vise for occasional jobs without taking bench space. Bolt the vise to a T-shaped adapter, made by screwing two hardwood blocks together, and clamp in the woodworking vise. There is no need to remove the adapter for storing. My vise has a steadying lip, so I notched the adapter to take it.—H. J. Gerber, Stillwater, Okla.

New Life for Old Jigsaw Blade

By maising the work up to the unused portion of a tooth-worn jigsaw blade, you can double its cutting life. Make a second table out of 1" stock, drilling a center hole to admit the blade. Then screw it to the jigsaw table at the front and the back.

*Electric Starting... Prices f.o.b. factory, subject to change... Mile Master Fuel System included with all models except the "3"... UBC certified brake bp at 4000 rpm (30's at 4500). More fishermen use Johnson Sea-Horse outboard motors than any other make. Because they are DiPENDable... Now MNE models—from 3 to 30 hp—all styled in beautiful Holiday Bronze! See your Johnson Dealer. Look for his name under 'Outboard Motors' in your classified telephone directory face: For complete details on all new Johnson Motors and all new

features for 1956, write for the new Johnson Sea-Horse Book of JOHNSON MOTORS, 500 Pershing Road, Woukegan, Illinois in Canada: Manufactured by Johnson Matars, Peterborough

SEA-HORSES
FOR DEPENDABILITY

Now... a versatile B-C powered flasholder you can carry in your pocket!

New Kodalite Super-M Flasholder

With a Kodalite Super-M Flasholder you can be truly ready to take flash pictures any time, anywhere. It's small enough, as is, to fit into your pocket. And when you're really pinched for space, you can slip off the 3-inch reflector, unscrew the bracket . . . and tuck the whole unit into a corner of your gadget bag. The Super-M accepts No. 8, 5, or 25 bulbs as well as low-cost M-2 bulbs—and is battery-condenser powered to provide top flash dependability. A universal mounting bracket and interchangeable, flash-post connector tips (ASA and Continental-type) enable the Super-M to fit most any shutter-synchronized camera.

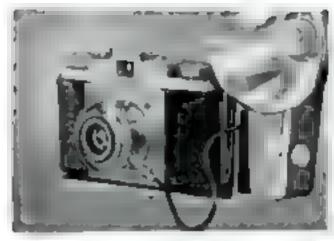

You'll like the Super-M's handling ease, too . . . the push-button bulb release, the sliding scale flash-calculator on the back, the natural-handle grip that assures steadiness. Smartly styled in your choice of brown or black, the Super-M is the most versatile miniature flash holder Kodak has ever built. Visit your dealer and see it soon. Only \$9.95 (battery extra).

*This is why we recommend B-C Flash . . .

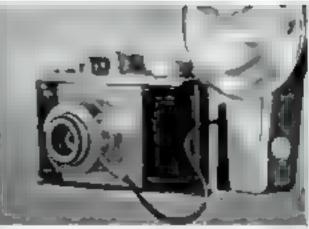

As you know, the botteries in a regular flash holder grow weak with usage. When this happens, a flashbulk is after slow to fire—or fails to fire at all Results you miss the picture.

With B-C (bottery-condenser) powered flash, you needn't worry about "slow-fires" or misfires from a weak battery. A small photo-flash battery (a 15-volt battery in the Kodalite Super-M Flasholder) faeds current into a condenser which stores up energy until needed. When the comera shutter is tripped, the condenser releases a bulb-firing surge of energy many times stronger than that produced by the usual 1 5-volt flashlight battery

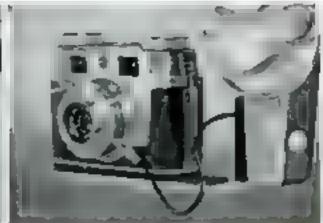

One of the nicest things about B-C is that besides prolonging the battery life, it also gives you positive, full-force voltage for hundreds of shots. Even when the battery begins to weaken, you get full voltage every time the shutter is tripped... Be certain with B-CI

Support Holds Logs for Speedy Sawing

You can saw a long log into fireplace lengths in one-two-three order with a holder like this one.

A U-shaped piece of \$"
steel rod holds down one end
of the log. A V-notched crosspiece supports the log at an
angle and prevents lateral
movement. The weight of the
free end of the log keeps the
kerf open as you saw.

Thread the ends of the %" rod, push through the frame and secure with nuts. Use four-by-fours for the frame.

Headlights Are Wind Indicator

AN ORNAMENTAL wind indicator in front of the home of Alvin Arp, near Walcott, lowa, was made from three automobile-head-light shells. The shells were mounted on channel-iron arms welded to the hub of a car wheel. The hub turns on a spindle welded to a pipe post set securely in the ground.

Novel Dumb-Walter Saves Steps

An ourside dumb-waiter eliminates a lot of stair climbing for a second-story tenant in this house. Rigged up by N. Brown of St. Petersburg, Fla., it lets him haul up the garbage pail to where he can reach it. Hooks engaging the handles of the pail hold it securely to the moving platform.

Men with mechanical skills:

measure yourself against this yardstick

Mechanics

Creed

Upon my honor I swear that I shall hold in sacred trust the rights and privileges conferred upon me as a certified mechanic. Knowing full well that the safety and lives of others are dependent upon my skill and judgment, I shall never knowingly subject others to risks which I would not be willing to assume for myself, or for those dear to me.

In discharging this trust, I pledge myself never to undertake work or approve work which I believe to be beyond the limits of my knowledge; nor shall I allow any superior to persuade me to approve aircraft or equipment as airworthy against my better judgment; nor shall I permit my judgment to be influenced by money or other personal gain; nor shall I pass as airworthy aircraft or equipment about which I am in doubt, either as a result of direct inspection or uncertainty regarding the ability of others who have worked on it to accomplish their work satisfactorily.

I realize the grave responsibility which is mine as a certified mechanic, to exercise my judgment on the air-worthiness of aircraft and equipment. I, therefore, pledge unyielding adherence to these precepts for the advancement of aviation and for the dignity of my vocation.

This chollenging creed has made the U. S. Air Force the finest technical service in the world. If you are a man who feels a deep sense of satisfaction from the knowledge of a job well done, the U. S. Air Force offers you a rewarding and exciting life. Skills you acquire in the Air Force will help you choose and succeed in your future career.

THE handle, axle and wheels from a child's stroller helped in making a handy rig for my welding tanks. The aluminum-tubing handle was pushed over two steel rods that I welded to a base plate, to which I also fused the axle. If your stroller axle doesn't seem sturdy enough, use \$" steel

rod. In fact, if an old stroller isn't available, you can bend a handle out of a length of tubing and use any pair of wheels.

Bolt a harness to the handle and weld legs and angle-iron stops to the base. I keep welding rods in tubing strapped to the handle.—M. C. Anderson, San Lorenzo, Culif.

Simple Setup Enables You to Drill Holes at Any Desired Angle

WITH a strip of wood as a guide for an electric drill resting on a stand, you can bore accurate angular or 90° holes in small stock. Clamp the work to the back of the bench. Then tack the guide at the desired angle to the bench top. Shde the unit along the guide.—R. G. Cooper, Trenton, Ontario.

Engineer's Reports 1958 CHEVROLET

It takes *more* than a heavy foot to "flatten" Pikes Peak In record time.

by Ed Goto, Chevrolet Chief Engineer

A few days ago, I was talking to a neighbor of mine about Chevrolet's record-breaking run up Pikea Peak. "How," he asked, "does that make the new Chevrolet a better car for me to drive? I hardly ever drive on mountain roads, at least not on any as steep or high as Pikea Peak!"

Maybe this same question applies to your driving. But have you ever considered what it takes to climb Pikes Peak in a little over 17 minutes, the way Chevrolet did?

Well, it takes a lot more than a heavy foot on the accelerator. For one thing,

it taken superior cornering ability—a quality that involves not only the steering geometry, but the balance of the entire car. And how this new Chevy clings to the curves!

Then, it takes a ready reserve of power for acceleration. We've engineered that into all Chevrolet engines—both the 6 and the V8's. In fact, our horsepower now ranges up to a new high of 205!

Aren't these the very qualities you want in your car? Whether you drive in mountains or not, Chevrolet's inherent stability and lightning acceleration add up to more safety and pleasure for you.

Ask your Chevrolet dealer to lend you the key. . . . Chevrolet Division of General Motors, Detroit 2, Michigan.

Here's haw Chevrolet proved its superior cornering ability.

ROCKWELL-BUILT

new

10" tilting arbor bench saw

Now you can get big 10" ezw capacity and performance—for little more than the price of an 8" saw! One look will convince you that it's the finest bench saw ever built for home workshops—that it's the biggest dollar-for-dollar value you've ever seen! Look at what you get:

BIG CAPACITY—You can handle practically any job because it lets you cut stock up to 31/4" thick, rip to the center of a 48" panel.

REAL ECONOMY—You get all the features and advantages of a big saw at a price that will really surprise you. And its solid construction assures minimum maintenance.

PRECISION—You get all the power and precision you need to do fast, accurate cutting on every job.

SAFETY—Completely shielded drive mechanism provides maximum safety, prevents damage to saw. A new push button switch prevents accidental starting, provides fast emergency stopping.

See this great new Delta 10" Bench Saw—try it yourself—compare it! Get all the facts, and make up your own mind! Your Delta Dealer is listed under "TOOLS" in the classified pages of your phone book. Send the coupon for catalog details—today!

Doorstop Protects Work Face

A RUBBER door wedge placed under the head of a hammer will enable you to pull out a nail without denting the work.

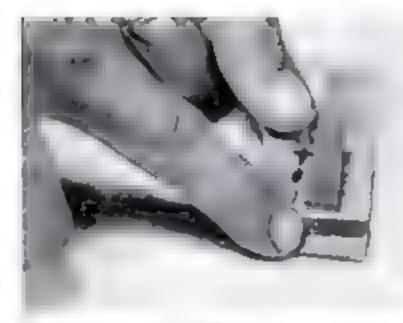

Tape Skidproofs Trouser Bar

TROUSERS will be less likely to slip off a hanger if you wind a spiral of adhesive tape around the crossbar as shown above. It will supply just the right amount of friction

"Pegs" Restore Ruined Antique

I was able to buy a fine antique secretary for a song because a former owner had wrecked it by nading up wobbly joints. Finding it impossible to conceal the nail holes, I drilled them out to a depth of K" and filled them with plastic composition wood. I then glued up the piece and refinished it with stain and varnish.

The even rows of filled holes now give it an antique, pegged look that's the envy of friends.—R. L. Clough Jr., Bristol, N. H.

Matchbook Holds Razor Blades

Razor blades can be safely stored or carned about in an empty matchbook. Slip one or more behind the striking lip to hold them. —O. S. McCollum, Vaux Hall, N. J.

Bands Lock in Hanging Tools

OUT-OF-SEASON gardening tools hung on paired nails in a garage or basement can be easily dislodged by accident. To safeguard both people and tools, lock the shafts in after hanging them in place by twisting a heavy rubber band across each pair of nails.

Markings on Chisels Show Size

Paint the sizes of your chisels on their handles and you'll be able to pick out at a glance the one you want. A more permanent method is to use a punch.—Frank A. Javor, North Bergen, N. J.

Mainstaye of the Hertz restal fleet, Front row (left to right)— Burck, Ford, Chevrolet, Back row—Caddlac, Okhanobde, Plymouth

Why does Hertz — world's largest rental fleet — use <u>Champion</u> Spark Plugs?

Operating 15,500 cars and 15,000 trucks, Hertz wants the most power and the most miles per gallon . . . so Hertz uses full-firing Champions!

You can bet that Hertz—world's largest rental fleet—knows all there is to know about spark plug performance and value!

In countries all around the globe

Hertz has put spark plugs through
the world's toughest road test. And
the fact that Hertz uses 5-rib
Champions speaks for itself!

Whatever car you drive-Chevrolet, Ford, Plymouth or any of the higher-priced makes—take a tip from Hertz... use 5-rib Champion Spark Plugs. When you install new Champions, you can immediately feel the difference in your car's response. You'll get quicker starts, faster acceleration . . . and more miles per gallon!

When you need spark plugs, don't settle for anything but the best Get precision made 5 rib Champions!

How FORD'S

new steering wheel

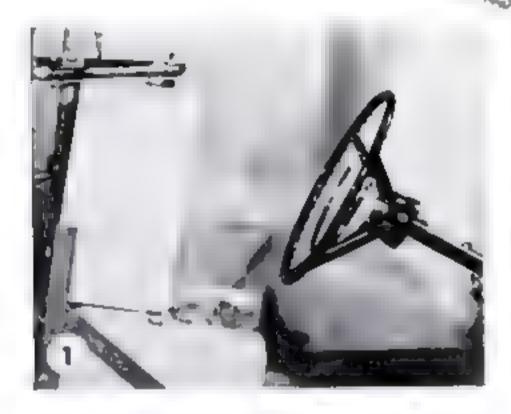

The statistics: 40% of all driver-injuries in accidents are caused by the driver striking the steering wheel assembly!

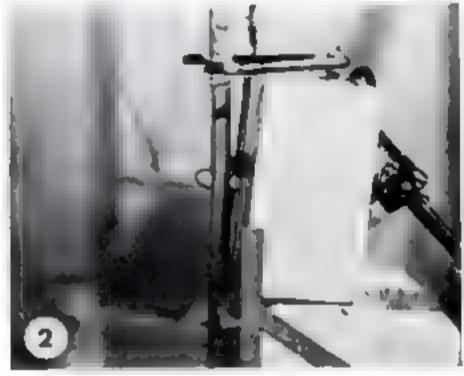

The problems to develop a new kind of steering wheel that would have a high degree of energy dissipation upon impact . . . protect the driver from the steering post in the event of an accident.

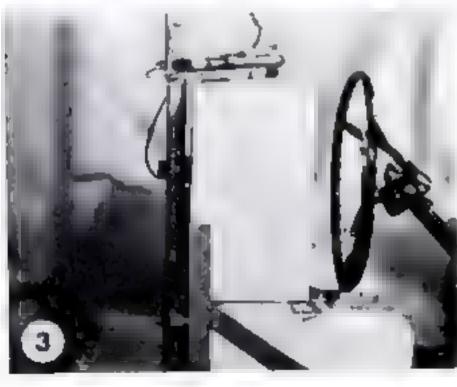

The solution: Ford's exclusive new deepcenter Lifeguard steering wheel! Ford's new Lifeguard wheel, standard on every '56 Ford model, is connected to the shorter steering post by three equally spaced spokes. Exhaustive tests show (see opposite page) that in case of impact, the spokes of this exclusive new Lifeguard wheel will bend away from the driver and at the same time, "soak up" force of impact. The driver, with his weight distributed over the rim of the wheel, is thus cushioned from striking the rigid steering post violently in an accident.

FORD Division of

After more than two years of testing and research, Ford comes up with an <u>exclusive</u> new contribution to driver safety!

- 1. Test equipment for impacting steering wheels is shown in illustration No. 1. A mass equal to the weight of the driver is dropped onto the wheel-in this case, Ford's exclusive Lifeguard deep-center design
- 2. As block strikes deep-center Ford wheel, spokes yield under impact, absorbing energy as they do so. The force is dissipated before the block reaches steering post.
- 3. Note in illustration No. 3 the rim has not collapsed but rather the spokes have yielded following the controlled direction pattern that helps protect the driver from injury.

Gus and the Ninety-Day Wonder

(Continued from page 1.1]

"—and furthermore, since Mad Man Jerk wants publicity in the newspapers for his Ninety-Day Wonder, I'm inviting the Capitol City *Times* to send a reporter and photographer to cover the story

"Up to now I've been polite. I've never mentioned the name of the lot that sold me the lemon. But unless this Gus Wilson proves that the Ninety-Day Wonder isn't an A-1 lemon. I'm going to run the jerk who sold it to me out of business. If Wilson can fix it and prove to me that the car was all right when I bought it—are you listening, Red Plummer?—I'll give the owner of the lot free plugs for a full year!"

GUS snapped the radio off. In front of the shop there was a screech of rubber as a car pulled up, Johnny Carter came running in.

"Did you hear that!" he cried. "If you can't fix his car, we're both ruined!"

"But I think I can fix his car," Gus said quietly. "And furthermore, I think I can prove that his trouble was entirely of his own making."

"You can?"

"One of his sponsors is Bill's Auto Accessories. He plugs one of their gadgets every week." Gus smiled. "One in particular sticks in my mind. When I heard him advertise it I thought to myself that it made more sense than a lot of them." Gus stopped to get out his tobacco pouch, "But I had a notion at the time that this gadget might, under certain circumstances, cause just the kind of trouble that Gruntzman is having."

Stan said very patiently, "Gus, re-

member us? What trouble?"

"A short circuit," said Gus. He started to walk to Johnny Carter's car. "Come on, Johnny. You're going to drive me to Bill's Auto Accessories in Capitol City. We'll be back in plenty of time for the broadcast."

AT FOUR-THIRTY that afternoon, there was such a crowd in front of the Model Garage that Jerry Corcoran

and two other state policemen were kept busy directing the parade of radio people, photographers, reporters and curiosity seekers.

Gus was the picture of confidence as the Ninety-Day Wonder sputtered up to him. Grunny Gruntzman got out briskly. He shook hands with Gus, not unpleasantly, Gus noted that, for all his dapper appearance and cocksure demeanor, he had a pleasant, rather sincere face. Gus got the distinct impression that Gruntzman honestly believed that he was crusading against the evils of the second-hand-car racket.

A man with earphones on made a signal to Gruntzman. The disc jockey took the microphone. He spoke briefly, outlining what was going on.

"And now," he concluded, "I'm going to turn the proceedings over to Gus Wilson of the Model Garage," Gruntzman handed the microphone to an announcer, who held it before Gus.

Gus said quietly, "Start the car." Stan Hicks jumped in and the motor turned over and then idled. The uneven rhythm was immediately evident. The announcer held the microphone close to it.

"And now," Gus said, as all eyes turned in his direction, "I am going to call upon my Ninety-Day Wonder expert to handle this problem." He looked into the crowd and his eye fell on four-year-old Molly Sturgess.

"Will you come over here, Molly?" he called. There was a stir in the crowd. Grunny Gruntzman's face began to get very red. Johnny Carter's eyes nearly popped from their sockets.

"TURN off the motor, Stan," directed Gus. "And then come out and lift the hood." While this was being done, observed, photographed and noted down, Gus bent down and whispered into Molly's ear. So interested was everybody in what was being done to the Ninety-Day Wonder that they didn't notice Gus's brief conference.

Texaco Tips On Car Care

How to prevent door locks from sticking

Occasionally, door locks on your car may tend to freeze up or stick, be difficult to open. Here's a simple way to keep them "easy to open." Squeeze powdered graphite in a tube directly into the keyholes. Also, in very cold weather, condensation inside lock may cause freezing—try heating your key lightly by match-flame, insert in lock and repeat if necessary to "soften" up jammed tumblers. Do not force key.

TAVOUNE

How to assure top engine power

On the road, you want the very best from your engine. Be sure to get it with Advanced Custom-Made Havaline—the motor oil that out-performs all others, regardless of price! Tested against the toughest motor oil competition on the market, Havaline proved its superiority. Havaline-lubricated engines delivered full power, used less gasoline and oil, stayed for cleaner, for top power and protection, change now to Havaline. THE TEXAS COMPANY

ever had.

Gus and the Ninety-Day Wonder

[Lantinued from page 252]

"Now," said Gus, "if you people will step back from the engine, my little expert will go to work." Molly climbed quickly up on the front bumper, leaned over under the hood, busied herself for a brief moment with her two little hands, withdrew her head and ran back to Gus. It was done so quickly that even the announcer didn't get over to see it.

"Start the engine again," Gus said.

This time the motor sounded smooth, even, regular. A burst of spontaneous applause went up from the crowd. The announcer rushed up to Molly.

"What did you do, honey?"

Gus interposed. "Trade secret," he said. "Isn't it, Molly?"

"Yes, Uncle Gus."

At this point Grunny Gruntzman proved himself not only a good sport but a good showman as well. He grabbed the microphone from the announcer.

"Folks," he said, "that gnawing sound you hear is your old friend Grunny Gruntzman eating his words. I guess I owe a year's free plugs to a certain second-hand-car dealer and I might as well give him the first one right now. Come over here, Johnny. Guys and chicks, I want you to meet an honest dealer. His name is Johnny Carter. And if I have anything to say about it, he'll be manager and owner of a new car agency in Capitol City before long. Johnny, I'm sorry for all the trouble I've caused you."

Johnny's face was red. He muttered awkwardly, "It's okay, Grunny. Thanks a lot."

GRUNTZMAN beckoned to Gus. Folks, I want to introduce the proprietor of the Model Garage. Gus, tell us now, what did you—I mean your expert—do?"

"You've been a good sport, Mr. Gruntzman," Gus said, "so I'll be one, too. When you got your car winterized, Johnny Carter tied a card with a piece of wire to your radiator hose. The card told how much antifreeze you had. After he had done that, and before you left his shop, you had one of his mechanics install a metal support to the underside of the radiator hose. It was a gadget known as a Hosupport."

"That's right, But I don't see-"

"You undid the wire on the card so that the Hosupport could be installed, and then you tied it back on. Right?"

"Yes, but-"

"That's when your troubles began. Shortly after you started your engine, the fan blew the card and wire back until they were right beside the generator. The fluttering of the card caused the wire to come in contact with the generator. Being attached to the metal Hosupport, it caused a constant short circuit.

"All my expert did was to take off the card and the wire."

One of the radio engineers was making signals to Gruntzman. The disc jockey nodded. "Guys and chicks, this concludes the Grunny Gruntzman show for today. I hope some of you will have learned as good a lesson as old Grunny has. Don't jump to conclusions. So long!"

THE radio men began gathering up their equipment. The crowd drifted away. Gruntzman was talking with Johnny Carter about the free plugs he was going to give him. Suddenly the Ninety-Day Wonder began to choke and sputter, and then it died altogether. Stan Hicks looked at Gus. Gus looked at Gruntzman. Gruntzman, his face becoming crimson with anger, looked at Johnny Carter.

"For crying out loud! There it goes again! I've been swindled again! I—"

"Hold on, Gruntzman," Gus said sternly. "Remember your advice to your listeners. Don't jump to conclusions. I suggest that you look at your gasoline gauge."

The disc jockey did so. He looked up, his face sheepish. "I'll be darned," he said. "Out of gas. Which," he added, "rust about describes me!"

NEXT MONTH: Gus drives a bad bargain.

This ALADDIN Readi-Cut House

delivered to you

Slightly Higher West of Missouri River

All Aladdin Houses come to you with lumber cut to EXACT size and each piece plainly marked. You get easy-to-understand drawings and instructions so you can't go wrong. It's fun to build, and you SAVE up to 50% on the cost. Aladdin has

been manufacturing readi-cut houses for 50 YEARS. Only the finest materials are used and all lumber is guaranteed THOROUGHLY DRY. 120 plans to choose from in 5 to 8 room modern styles.

Your ALADDIN comes to you ready to nail together-you don't waste time measuring and cutting each piece of lumber. All that has been done by precision machines at our mill. That's why it fits together perfectly-why it takes less time and labor to build. Even if you hire a carpenter to help, his time is not spent in measuring and cutting. Aladdin's Readi-Cut System eliminates waste. No short ends are left over that cost you money. No wonder thousands of people WITHOUT any carpentry experience have built their own Aladdin Homes and saved thousands of dollars.

WORLD'S LARGEST MANUFACTURER OF READI-CUT HOMES

WHAT YOU GET WHEN YOU BUY AN ALADDIN HOUSE

- ALL THE LIMITER mecurately cut to fit, marked and aumbered ready to seed prochially without use of a saw,
- e SIDING

"Black Box" Points Way to Oil and Gold

[Continued from page 119]

gions are finding, conversely, that uranium can serve as a "tracer" to lead them to the yellow metal. A higher-than-normal reading of radioactivity on the scintillation counter, in this case, tells them where to dig.

In this way a group of prospectors, exploring radioactive "hot spots" in the black sands of French Guiana, recently located thousands of dollars' worth of gold. During a visit to New York they gratefully reported their success to M. M. Reiss, former Atomic Energy Commission physicist and president of The Radiac Company, which supplies scintillation counters and other tracer-prospecting and atomic equipment.

Not long ago the Radiac people received an order for a scintillation counter by long-distance phone, from the mayor of a large Florida city. With its aid, he was going to explore his property for thorium, which like tranium can be detected by its radioactivity. He didn't find enough thorium to be worth exploiting. But he did find substantial quantities of valuable titanium, often found together with thorium, and his ore is now being actively mined.

Similarly, the radioactivity of uranium has led hunters with scintillation counters to important associated deposits of silver, tin, vanadium, nickel and bismuth.

The most striking success of tracer prospecting, in this country, has been as an aid to searchers for oil. When a subterranean oil formation lies beneath terrain explored with a scintillation counter or supersensitive Geiger counter, the instrument usually reveals a peculiar and characteristic pattern of radioactivity.

Directly over a hidden oil pool the instrument registers abnormally low radioactivity. But at the border of the oil formation the needle climbs to show higher radioactivity than normal.

Above an oil formation of the kind geologists call a closed dome, the highlevel border, or "halo," is circular or elliptical, encircling the area of low radioactivity. Carry a counter by car or a foot squarely across the formation, while a recording attachment continuously charts its readings, and the graph looks like a cross section of a volcanic crater. The raised rim corresponds to the radioactive halo. The central depression—of low-level radioactivity—marks the most likely spot to drill for oil.

Elsewhere the bordering halo may take the form of an extended pair of wavy lines, with a low-reading area between them. Typically this indicates a buried stream bed that is filled with oil or gas.

Of course, oil formations are not invariably signposted in such ideally clearcut fashion. Various geological compli-

The mon scho shoulders his responsibilities has no room left for a chip. —The Sidewale Superintendent

.........................

cations can alter and partially mask these simple radioactive patterns. But when readings of radioactivity are taken systematically at measured intervals, usually the pattern "shines through."

Properly the counter's verdict does not replace, but supplements and confirms, other signs of oil familiar to trained geologists. Even so, experts are apt to feel as if they had been looking for oil blindfolded, when they first see the "scint" in action.

Practical-minded prospectors, taking advantage of this scientific divining rod, are hastening to cash in on the new technique.

Helicopters skim the ground at 300 to 500 feet, taking scintillation-counter readings to map radioactive abnormalities. Four-wheel-drive trucks make spaced runs at 10 m.p.h., bearing instruments that record surface radioactivity continuously on moving tape, driven by the speedometer cable. And the charts that result are enabling the surveyors to tap new wealth in mineral treasure.

roomful of mathematicians busy for a week. That means that if your engine behaves in ways you haven't anticipated, you can change your testing pattern at once. Simultaneously, to keep the boys back at the home factory happy, the obliging machine will send them a teletyped copy of its findings.

Next door to the four-cell Engine Test Facility, scale models of experimental missile designs are beginning to be put through what AEDC calls its Gas Dynamics Facility. The hypersonic tunnels used here are comparatively small. They have to be, because wind velocities of from four to 10 times the speed of sound call for fantastic quantities of air, even in a model-testing cell.

Steel bottles. To feed the Gas Dynamics Facility's most spectacular units—two 7,600-mile-per-hour tunnels that are not yet finished—air at a pressure of 4,000 pounds to the square inch will be stored in a steel bottle nearly four city blocks long, four feet in diameter, and weighing one ton to the running foot. Not far away, exhausters will bleed the air from a steel sphere as high as a seven-story office building.

Between the two steel tanks, a model of the missile to be tested will be set up facing an hourglass-shaped nozzle whose waist is only 1/16 of an inch wide at its top velocity setting.

When dispatchers open the valves between the two tanks, the midget rocket will be in for 15 minutes of the world's fastest simulated flight.

The big wind. In addition to the Engine Test and Gas Dynamics plants, there's a third showpiece at AEDC—a "Gee Whiz" item that they save for us visiting firemen until last.

That's the Center's huge Propulsion Wind Tunnel: two still-to-be-completed rectangles of pipe spread over 600 acres. Their ducting reaches the incredible diameter of 60 feet at the testing zones.

One rectangle will be used to set up transonic velocities for full-size rockets, and for jet engines nested in their fuselages. The other will take the same sort of equipment and give it a 2,500-mile-per-hour supersonic treatment.

To set up this flow of air, 300 freightcar loads of motor and compressor parts were hauled into Tullahoma last year. They are not all assembled yet. But when they are, they will form the world's biggest single rotating machine, nearly as long as two football fields.

At one end, the two most powerful electric motors ever built, 83,000-horsepower versions of the little synchronous jobs found in electric clocks, will be kicked over and brought up to speed by

The most important mistakes to correct are those that you feel sure you can get away with.

..............................

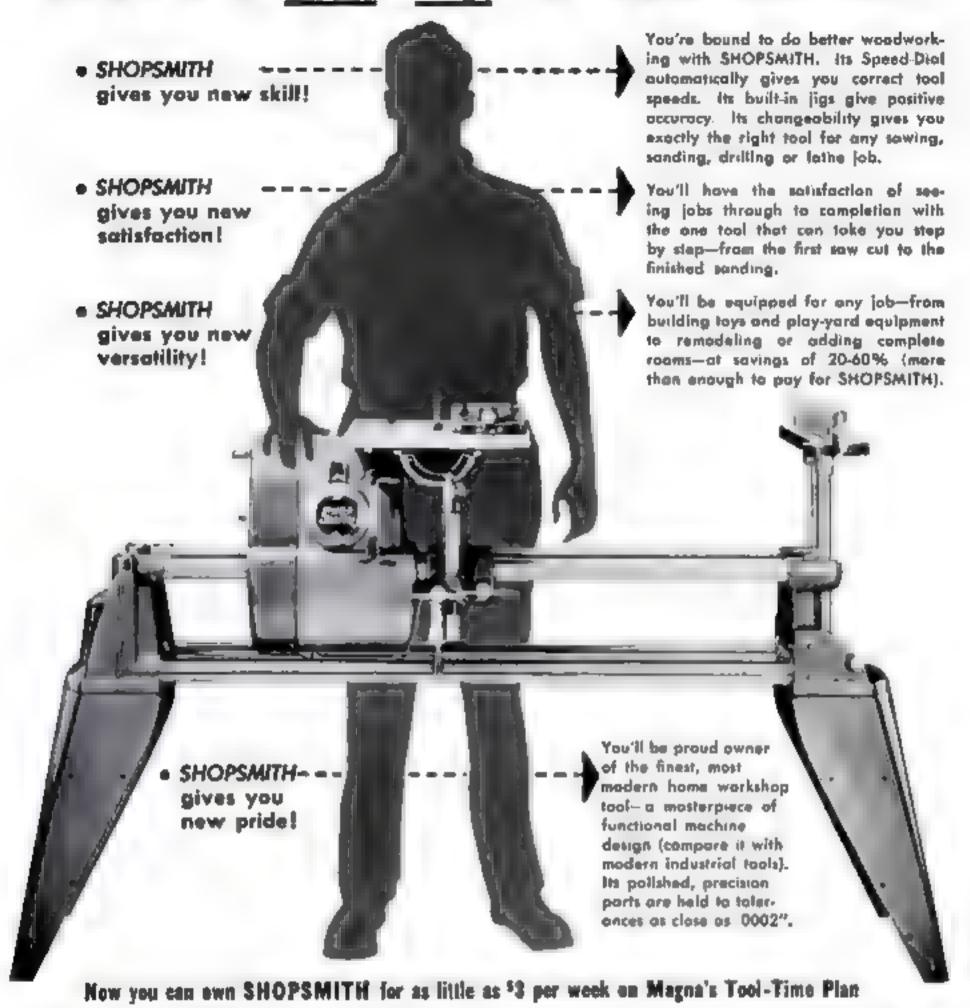

-THE STREWALK SUPERINTENDENT

a pair of 25,000-horsepower starter motors. It will take eight minutes for this formidable power train to reach its 600-r.p.m. operating speed. When it does, its four motors will use more juice than a city the size of Nashville.

Cooling them off. At the other end of the shafting, a battery of air compressors weighing 7,000 tons, or as much as an antiaircraft cruiser, will soak up the 216,000 horsepower. Approximately 100,000 gallons of cooling water a minute, pumped from a 5,000-acre reservoir, will carry away the heat that these compressors generate

If for some reason the main power lines at AEDC should ever go down, making it impossible to stop the huge rotating parts with electric braking, built-up momentum would keep it running for 50 minutes. During that time, with the water pumps shut off, much of the equipment would be burned to a crisp. But it will never happen. The Center's standby generators would cut in instantly. And with the driving motors converted into the world's biggest power brakes, the monster machine would be brought to a safe stop in three minutes.

THERE'S A NEW YOU IN THIS PICTURE!

See the new SHOPSMITH & Mark 5 demonstrated at leading hardwore or department stores or any Montgomery Ward store. See how it converts in less than 30 seconds from a 9" circular saw to a 12" disc sander, 34" lathe, 16" drill press or horizontal drill.

Power Mount makes it easy to add Magna's new 18" jugsaw or 4" jointer. See the Speed-Dial you simply dial to select the right speed for the job. SHOPSMITH comes ready to plug in, with built-in 3:-hp. motor, bench, chrome rustproofing — \$289.50

Care and Feeding of Engines

BRAKE SQUEAL

To silence squesling brakes, remove the brake drum and inspect the brake above to remedy the cause of vibration which produces the squeal. Move shoe toward brake backing plate, noting

clearance of guide, which should hold shoe square. If cam pin is too long, throwing shoe out of alignment, file pin until shoe moves in line with center of wheel cylinder. Check guide to see that it is not forcing shoe away from backing plate Lubricate guides with a thin coating of Lubri-Plate. 2 Check for a bent brake shoe by CAM laying web of shoe on a flat surface plate. It should contact plate for full length of shoe. When assembling, make sure

brake shoe fits anchor pin snugly. If there is clearance, replace shoe.

VALVE SPRINGS

Valve reconditioning should always include these important checks on valve springs: Compare with a new spring for length, discarding any which are more than 's shorter than new spring They have lost tension, Check squareness of spring ends. A

distorted spring will cause trouble. Look for cracks, checks or pitting, discarding springs which show such damage. Rusty springs should be cleaned. Check under load for correct apring beight. A load of 807 should compress spring to 114" in height. Get manufacturer's specifications

from car dealer. Place right end up. If coils are closer together at one end than the other, install with tight coils toward head of valve, otherwise apring will break in operation. Replace all aprings if they have been used a long time.

THIS FREE MANUAL IS FOR YOU!

To get this free illustrated manual of car care, just send your request on a postal card. You'll find dozens of detailed instructions on how to make repairs and adjustments. And when you re-ring, insist on Sesied Power KromeX Ring Sets-for fast break-in, more power, greater oil economy, and longer life. Your dealer has them or can get them for you. Sealed Power, Dept. water storage checks fouling and keeps boats from sinking in storms.

A problem at John Kerr Lake, N. C., was solved by a marina owner in an ingenious way. President Sam Pease of the Tar Heel Marina wanted to give his customers shelter from sudden squalls. He also wanted to open a snack bar right down at the waterfront.

He accomplished both by designing something new: a breezeway dock. At one end he built a shop where he rents water skis and motors. At the other end he built his snack bar. Between these is a seagoing breezeway where people huddle during storms.

So today's marinas are a lot more than just boat "filling stations" or old-fashioned boatyards. They rent motors, boats, surfboards, They will even rent you a boat and driver to tow you on skis. The Tar Heel Marina rents fishpoles for 50 cents, You can get laundry service, a shower, ice to keep your fish. In many

marinas you pay from \$2 to \$15 a month for boat parking.

Good marinas make money. Bill Walker, in Virginia, started with about \$7,000 that he and his wife had saved. Today, six years later, he's worth \$60,000. An-

A man is as old as he feels on a beautiful seekend.

-THE SIDEWALK SUPERINTENDENT

other marina owner told me that he expected to sell 60 boats and 60 motors this year for a gross profit of \$16,000.

But new marina gimmicks are coming fast. Some are opening "boatels."

At John Kerr Lake, Sam Pease has another idea: he's putting in ship-toshore radio. Now you can phone the marina from your outboard boat and say:

"Tell my wife the fish are biting and I won't be home until tomorrow!" END

grips like a pipe wrench a cinch to handle A PROPERTY. 1%" No. 420 Terrific gripping power on any shape $\frac{1}{8}$ " to 1^{3} ₄" size. CHAMPION DEARMENT TOOL CO. MEADVILLE, PA

Corvette Challenges Thunderbird, Hawk [Continued from page 139]

Ford slide-rule virtuosi were thinking about Chevrolet when they gave the Thunderbird a quick going-over for 1956. Starting with a car that was, in its field, selling like ladders in a burning building, Ford left the styling alone except for some minor matters: A Continental-type spare-wheel carrier rides the back now, and window wings and ventilators in the body have improved the cockpit cooling.

T-bird's new view. You can also have nice round Queen Mary type portholes in your hardtop if you like. It's a free option, although it costs Ford about \$27.

All of Ford's safety equipment is available, of course. The new upholstery is firmer and you can now put a passenger in the middle of the seat over the tunnel without risk of being sued for cruel and inhuman treatment.

As before, there's a three-way engineand-transmission choice. With the standard transmission, you get the 292-inch engine, running at 8.4:1 and delivering 202 horsepower at 4,600 r.p.m. With overdrive, 312 inches, same compression ratio, 215 horses. Fordomatic, 312, 9:1, 225 hp. For comparison, last year's Fordomatic delivered 198 horsepower out of the 292inch engine.

In five or six miles of dusk-time motoring around the streets of Dearborn, during which, if anyone is listening, we did not do 81 miles per hour, the Thunderbird seemed to this reporter to be slightly more taut and firm than last year's, It has more of an all-in-one-piece feeling, and I believed the man who told me that the chassis is slightly heavier now. Other than that, it handles like the '55, which is to say that it handles well. The front suspension is unchanged, the rear springs are some three inches longer and the shocks have been recalibrated to put up a bit more fight. They've gone and raised the steering ratio from 20 to 23 to 1, bowever, Customer demand, the man said. (Chevrolet buyers must have quicker reflexes, because the Corvette is a snappy 16 to 1.)

[Continued on page 264]

New! Just \$9950!

World's only orbital-action bayonet saw!

Now—the first real improvement since portable jig saws were invented! It's Porter-Cable's revolutionary new Model 148—designed around a wholly new principle, guaranteed to outperform any other portable jig saw at any price.

Orbital action makes the difference. Blade teeth are in contact only on the cutting stroke—back away on the relief stroke. Harmful "drag" is completely gone—and performance reaches a new high.

By actual test, the Model 148 cuts up to 4 times faster than the best conventional up-and-down saws. It has a full 2" capacity in wood—
34" in aluminum, 1/4" in steel.
Its cool, comfortable grip and perfect balance make easy work of any job. Get the whole amazing story from your Porter-Cable dealer—or write today for full information and name of your nearest Dealer.

Corvette Challenges Thunderbird, Hawk

[Continued from page 202]

Getavory. You don't need a dynamometer to notice the presence of the extra 27 horses, and the '55's 0-60 time of 11.1 seconds should be down a peg or two and everything else with it. The T-bird and the Corvette should run closer together than half-past six, the Corvette in front by a thick whisker. Still, they may both get a good look at the squared-off tail of the new Colden Hawk Studebaker when it comes to take-off

The Hawk is a blue chip going down on Studebaker's bet that there are customers waiting for a sports car, or a sportstype car, that will carry more than two people. The Golden Hawk is a full five-passenger sedan. Power plant is the big (352 inches) Packard engine, putting out 275 horsepower and 380-foot-pounds of torque at 2,800 r.p.m. The Hawk has the highest power-to-weight ratio of all U.S. production cars, and the factory frankly states that it was designed to run away from everything else in the country. Will

it³ Probably. It does 0-30 in 3.9 seconds, 30-60 in 5.4, and 0-75 in 15.1. If that isn't quick enough for you, you must own more life insurance than I do

This is a small car—17 feet long, six wide, a couple inches under five feet high—and it looks a good deal more like the '55 Speedster than does the rest of the South Bend line, which is conventional and big. Incidentally, Raymond Loewy says that he designed it, and Studebaker-Packard says that he didn't, that William Schmidt did. Whoever did, it's a good-looking automobile.

Eyebrows, wings, fins. The grille is all new, a squared-off, Ferrari-like, cookie-cutter type, flanked by a pair of typically Studebaker eyebrow-shaped air intakes. There's an air-scoop bulge on the engine lid but it's a dummy. A couple of pretty big parking-and-signal lamps sit high on the front wings, effectively lousing up a nice line, and the rear wings

Bruce Hardwood Floors

Product world's largest bardwood fluoring maker

Corvette Challenges Thunderbird, Hawk [Continued from page 264]

have the fin-type bulges that are getting to be as standard as four wheels on U.S. automobiles.

The nicest instrument panel available on an American car today is the Golden Hawk's—round, white-on-black instruments set in a machine-turned metal facing and all eight of them clearly visible through the T-spoked steering wheel, the speedometer, vacuum gauge and tachometer most prominent,

Hawk flies low. Only a prototype was available for driving in South Bend when I was at the proving grounds a couple of weeks before the Hawk was released, and it was a bit heavier than the standard 3,440 pounds. Manual shift with overdrive is regular equipment, but this car had the optional dual-range Ultramatic, an inoperative tachometer and signs of a lot of use. Therefore the acceleration figures I obtained—on a fifth-wheel speedometer—are impressive.

This is a fast automobile by any standard in the world. It needs big brakes, and has them: 195 inches of brake area in finned drums, 11 inches in front, 10 in the rear. Safety door latches are standard equipment, seat belts and dash pad-

ding optional.

Solid and sure-footed. Suspension is Studebaker standard. It feels slightly stiffer than normal. The Golden Hawk is a solid, sure-footed car, a pleasure to handle. Even in an absurdly tight corner it showed no lethal tendencies, no rearend determination to leave the county, no more roll than it was entitled to. With only the driver aboard, it felt nose-heavy to this observer, but with the family in the back seat and three or four sacks of uranium ore in the trunk it would be as on the level as a church fair.

For \$2,850 bare at the factory or \$3,678.82 with every extra in the catalogue, including wire wheels, this is quite a buy, indeed. The Golden Hawk is the best answer available for the character whose wife won't allow a sports car in the family garage because it has no room for the kids.

Smooth Engine Power calls for Quality Bearings . . . FEDERAL-MOGUL QUALITY!

Engine performance starts at the connecting rod and crankshaft bearings. These are the vital points where gasoline explosive force is converted to turning power. Bearings take the impact, carry the load of variable driving conditions. They meter oil and control the flow of lubrication for cylinder walls and rings. Replacing with Federal-Mogul QUALITY bearings restores lively traffic response, smooth power on highways and hills, gas and oil economy, freedom from power-stealing oil pumping!

What's New in Protab Homes [Continued from page 104]

they would blow away in a few days. Now, even an expert studying a finished house may find it difficult to tell if it was factory made or built conventionally.

Bowing to the public, many manufacturers never use that word "prefabricated." Instead, they say that their houses are "pre-cut," "pre-engineered," or "produced on the assembly line."

There are flaws in prefabs which have not wholly disappeared yet. The small models are usually designed for slab construction and sometimes are difficult

Money is like knowledge—the more you have of it the less you need to talk.

—Tue Sidewalk Superintendent

.

to get with basements. Household storage space is limited in some models.

Inside walls are not overly sturdy in some of these homes. Factory-assembled walls are often just two-by-twos covered with X" gypsum board, as compared with the two-by-four framing and half-inch gypsum that are generally used by conventional builders. A wall that gets the shakes whenever you slam a door can become quite annoying.

Prejab prices vary from city to city.

A model that is low-priced in one place

may be over-priced elsewhere.

The house package that is shipped from the factory usually costs only about 40 percent of the price the buyer pays. The other 60 percent of the purchase price covers work done at the site and marketing costs. Since labor costs and the efficiency of local builders vary so much in different places, it is impossible for a manufacturer to tell you quickly exactly how much one of his houses will cost when it is erected on your site. A shopper must find that out by discussing prices with his local dealer.

The prefabbers, nevertheless, are moving ahead. They already have about 15 percent of the market. In a few years they expect to be producing most of the new homes built.

As little as \$53* (full price!) buys a 1956 CHRIS-CRAFT Boat Kit!

Mr. Power Steering's Ship Comes In [Continued from page 164]

big advantage. Now, the inventor figured, he'd sit tight and wait out the boom.

By the late forties sales had slackened and customers had begun to pick and choose. The big companies had to look for new selling points. The log jam broke in 1951 when, with great fanfare, one of them announced a model with an absolutely new feature—power steering. It was hot—it was revolutionary...

Ironically, the first production of power-steered cars didn't net Davis a nickel. They used Davis principles, but only those in the expired patents.

The inventor didn't worry. Within hours of the announcement, Bendix was besieged with customers for its Davis-

A badly needed invention in America today is some kind of dough that really sticks to your fingers.

- FRE SIDEWALK SUPERISTENDENT

beensed units. Adaptation and tooling problems that had dragged on for years were conquered in weeks as the big companies rushed to meet the competition.

Daris drawes royalties today primarily from his axial-movement patent, which will expire in three years. But he isn't waiting. Over the years he has taken out over 30 U.S. and foreign patents in this field. And he has further improvements on the fire. With these he hopes to maintain the dominant position of Davis-licensed power-steering units for years to come

About once a week, a struggling inventor drops in at Davis' modest Waltham office, eager to show him bundles of blueprints. Davis courteously looks them over. But he warns his visitors that a good idea is only the first step toward a commercially successful invention. The real headaches come with investigations, designs, tests, patents. Timeliness is vital; so is luck. And, he adds with only a touch of grimness, don't overlook the other requisite for becoming a successful inventor: a long life,

10-INCH DELUXE TILT-ARROY SAW (Table culousions and short options). S-inch medic available.

Now! <u>Professional</u> quality in home power tools!

What a pleasure to work with — the new Toro power tools! Mirror-polished working surfaces make handling easy. Every operation is done accurately.

And every finished piece fits tightly, solidly, to give you the kind of results you never thought possible with home work-

shop power tools.

The reason is simple. Toro has built professional quality into its home workshop table saws, drill press, jointer-planers, jig saw, band saw and belt sander Castings are heavier. Finishing is finer. Tolerances are closer.

And no wonder! Toro power tools are backed by 40 years' experience in building precision power equipment — including the world's most complete line of power

mowers.

Fuel Injection is Coming This Year (Continued from page 143)

it is torque that supplies the push at the rear wheels

Cheaper fuel, more miles. With fuel injection, a car owner can, if he likes, trade the added horsepower that he gets for cheaper fuel. A fuel injection engine will perform nicely, without pinging, on lower-octane gas. Or he can trade the horsepower for even more miles per gallon by leaning-out his mixture.

With fuel injection, hood lines can come down because the carburetor is thrown out. The fuel-distributing system, and even the air cleaner, can be located anywhere in the engine compartment.

If fuel injection is so wonderful, why has it been so long in coming? The answer is that it has always been too expensive for Detroit to consider. The injection system alone on the Mercedes-Benz, best known of the fuel-injection cars, costs \$500.

A carburetor is simple—at least in theory A fuel-injection system, with fuel pumps, fuel filter, injection nozzles and other components, is not. For years Detroit looked at fuel injection and said uh-uh.

In the absence of a demand, little was spent to explore fuel injection's possibilities. Some racing and aircraft engines used it because cost was a minor factor. Diesels used it because injection was the heart of the system.

But so long as a carburetor cost three dollars, nobody was interested.

Power and pots. Then came the flood of high-horsepower V-8s, Their fuel and air appetites were finicky. The old two-barrel carburetor that the automobile companies bought for three bucks gave way to one with four barrels that cost \$12 to \$15. When, as sometimes happened, two of the things were mounted on an engine, the cost soared to as much as \$30. Fuel injection then began to look better.

Detroit now has been working actively on fuel injection for at least 2% years. Bosch was successful at getting the pros-

Kitty Kimoul says:

"Here's the easiest insulation of all to cut, measure and install!"

■ Kimsut Insulation is designed to cut winter fuel bills up to 33%—to keep your house up to 20° cooler in summer.

- And KIMSUL is clean—free of irritating dust and slivers.
- So light and compact even a woman can carry a 200 ft. roll or take home enough in the car to insulate an entire attic.

At your Kimsul lumber dealer's—this denim cobbler's apron. Regular \$2.50 value only 89¢

Perfect for hobby work, gardening, barbecuing. Has three large pockets, adjustable waist and neck bands. Only at your KIMSUL lumber dealer's and only for a limited time.

Kimberly-Clark Corporation . Neenah, Wisconsin

Fuel Injection Is Coming This Year (Continued from page 272)

pective price down, and began dehvering hand-built units to certain car manufacturers for research in mid-1954. Every independent carburetor manufacturer selling to the auto factories has some sort of a fuel-injection system on test.

There are wide variations in fuel-injection design. Racing engines often use
a constant-flow or "drool" system. An
intermittent system, wherein the fuel is
vapored directly into the cylinders,
through holes in the cylinder walls, is
highly successful. It works—but the cost
is prohibitive. The injection pump must
be big to supply the necessary pressure,
and the nozzles must be rugged enough
to withstand the high temperatures and
pressures in the cylinders.

Cool nossles. Bosch devised a system with, what is known as "port injection," The fuel is vapored into the cylinders from nozzles placed just behind the regular intake valves. It goes in with the air, which is delivered by the intake manifold. The nozzles are cooled by the vaporizing gas and the air. They are not subjected to the heat and pressures in

the cylinders.

Fuel-line supply pressures are lower. So the pumps can be smaller and cheaper.

The big problem was fuel-flow control. A diesel engine doesn't care a great deal how much air is rammed into its cylinders. When the fuel comes in and the piston goes up, it fires, But if the proper fuel-air ratio is not maintained in a gasoline engine, says Sidney E. Miller, American Bosch's engineering vice-president, "you're dead."

Bosch wanted a simple, inexpensive control. It was obtained by keying fuel flow to intake-manifold pressure. The accelerator pedal, acting exactly the opposite to that on a diesel, valves only air into the engine. The position of the valves—the same butterflies that you have in your present carburetor—determines the amount of vacuum in the manifold.

Vacuum control. A little pipe taps the manifold. The amount of vacuum

[Continued on page 310]

Professional, big-tool precision at small-tool cost!

Yates-American Saw-Jointer-Sander Combination

Standing behind your choice of Yater-American is the experienced traftimaniship of a company that, for more than 73 years, has specialized in designing and building precision machinery for professional woodworkers.

SHEETROCK*

the fireproof gypsum wallboard

Build or remodel with Woodgrained SHEETROCK, Lend distinction to basement or attic rooms, libraries or dens with faithful photographic reproductions of the finest pine, mahogany or walnut wood paneling. Woodgrain SHEETROCK is strong, durable, crack-resistant. You can apply it yourself! Just nail easy-to-cut, easy-to-fit panels to framing members with matching-color nails. Ask your U.S.G. building materials dealer about it or write Dept. PS-1, 300 W. Adams St., Chicago 6. Also made in Canada by Canadian Gypsum Company, Ltd., Toronto and Montreal.

BUILD A READY-CUT "LIBERTY" HOME!

You can save several thousand dollars by building a Liberty Home! Buy direct from our mill at our low, freight-paid price.

HERE'S WHAT WE FURNISH

- LUMBER CUT-TO-FIT
- DOORS.
- WINDOWS
- SIDING
- MILLWORK
- FLOORING
 - TRIM
- ROOFING . MOULDING
- HARDWARE
- PLANS & BUILDING INSTRUCTIONS

Big savings in labor, All materials priced at rock-bottom. No wonder our customers write us that we saved them 30% to 40 %. Easy terms—monthly payments. Architecturally approved construction. (Not prefabilicated).

What "Liberty" Owners Say! Saved \$4,000 to \$6,000

"Compared to a local contractor's price to build a home equal to my Liberty", I will be saving \$4,000 to \$6,000; so you can see why I have such anthuslasm for Liberty Homes."

VERY EASY to Build Every step in the building of a Liberty Home is figured out for you, so that all you have to do is follow the drawings and instructions that we furnish you.

NEW! Make your own hi-fi speaker cabinet with Weldwood!

Model KD1 The Patrician IV

The Regency

Model KD7 The Baronet

Model KO2 The Georgian

Model KD5 The Empire

Madel KD3 The Centurion

Model KD6 The Aristocrat

7 Eactro-Voice models for single- or multiple-speaker high-fidelity units—kits start at \$24, Da-H-Yourself books including plans, \$1.00 [except Potricion and Georgian, \$1.50, Baronet, 75g).

Here's why the new plans and kits by Electro-Voice, Inc., specify beautiful Weldwood plywood as ideal material for speaker enclosures.

Nothing equals wood for fine sound reproduction. Weldwood plywood preserves the procise sound characteristics that Electro-Voice has designed into your cabinet. For Weldwood resists warping, swelling and shape changes—distortions that may ruin hi-fi sound. And Weldwood's beauty matches the beautiful music you'll enjoy

Weldwood® Plywood

AND TV TUBES INCLUDING: SEVEN PIN MUNICIPALITY EIGHT PIN SHOMHKARS, OCTALS AND LOCTALS; MINE PIN MOVALS

TOU CAN'T INSERT A TUM IN THE WEONG SOCKET.

It is impossible to insert the Juliu in the wrong socket when using the new Model TC-15. Separate sockets are used, and for each type of tube base. If the tube fits in the socket it are be tested.

"FRIS-POINT" TLEMBIT

SWITCHING SYSTEM.

absolute minimum. Any pln may be used as a figurest pin and the voltage applied between that pin and any other pin, or went the "top-cap."

CHECKS FOR SHORTS AND LEAKAGES BETWEEN ALL GLEMENTS. The Model TC 35 provides a super sensitive method of checking for sharts and leakages up to 3 Magehine between any and all of the terminals.

ELEMENTAL SWITCHES ARE NUMBERED IN STREET ACCORD-ANCE WITH RALA, SPECIFICATION.

One of the most important improvements, we believe, is the fact that the 4 position feat-action snop switches are all pumbered in exact accordance with the standard E.M.A. numbering system. Thus, if the element terminating in pin No. 7 of a tube is under test, button No. 7 is used for that heat.

The Bodel TC-SI comes complete with specifical instruc-tions and charts. See it on the junch—see it has field calls. A discontinued corrying cone, imbedied at an autra sharps, assummedates the tester and book of instructions.

SUPPLY - Stee E VIRGOL AVE. GAY PS & or shock AND ANDRESS SA, CALIF. .

Fuel Injection Is Coming This Year [Continued from page 274]

present shows how much air is being delivered to the cylinders, Minimum vacuum, for instance, indicates wide-open throttle and a lot of air. The pipe transmits the information to the fuel pump, and the pump sends a proportionate amount of fuel to the cylinders.

There were other problems. Priming for cold starts was a stickler. A carburetor primes through an automatic or manual "choke." Bosch finally devised an automatic method for spraying gasoline vapor directly into the manifold.

At this point everything was working perfectly-in the laboratory, But one wintry day a Bosch man threw one of the company's research cars, equipped with an automatic transmission, in gear and promptly killed his injection engine. It primed and started all right, but it balked at the load until it warmed up.

Bosch won't reveal the answer that its engineers found to that one.

"We solved it," says Miller, "Our competitors will have to find out how."

Bosch fuel injection originated in the company laboratories in Springfield. Mass. It now has passed rigorous heat and cold tests: Research cars have been driven in zero weather. Laboratory systems have been run at 60 degrees below.

Fuel-injection systems will require more attention than a carburetor. Some of the parts are machined to tolerances of millionths of an inch. The plunger in the fuel distributing pump will cycle back and forth 10,000 times a minute at a road speed of 60 m.p.h. How will the parts wear? Bosch says that the moving parts should last for 100,000 miles.

Because the fuel flowing through the distributing pump and injection nozzles must be extra clean, the special fuel filter should be replaced at about 30,000 miles.

Engine alterations will accompany the adoption of fuel injection. Present engines are not designed for it. What changes will come about is a guess.

Cylinder heads may undergo reshaping. Intake manifolds certainly will grow bigger. Fuel injection will remove the restrictions on their size. More air will permit more fuel to be fed to engines. More fuel will produce more power,

But the traffic ticket will remain constant amid the changes to come. The other day a friend of Miller's, newly introduced to fuel injection, stepped on the gas when the light turned green. In an excess of ecstasy, he was doing 50 before he knew it. Too late, he spotted the cop.

He paid.

NEXT MONTH ... | Building 2½ Engines a Minute

In permort's newest automobile engine plant, the workers mostly twist dials and watch blinker lights. The heavy work is done by mammoth machines that practically think, Result: a new V-8 every 24 seconds. A single station tests 72 finished engines at a time: connects fuel, oil and water lines . . . starts the engines . . runs them 20 minutes . . . shuts them off ... reports how they did.

This latest miracle of automation will be described in five pages of eye-witness sketches by artist-reporter J. George Janes in the March issue of Popular

SCIENCE MONTHLY.

MORE

ACCURACY-VERSATILITY-DEPENDABILITY FOR YOUR MONEY

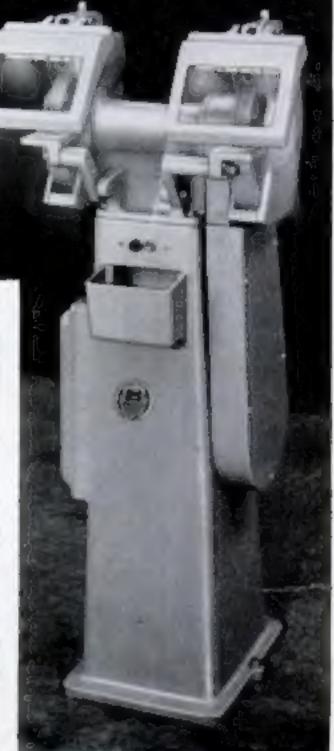

SOUTH BEND gives you quality that counts—quality that pays off in better and faster metal working by means of more accuracy, versatility and dependability.

Compare the South Bend 7" Shaper and Pedestal Grinder with any others on this basis. You'll find that their quality actually gives you more value on a dollar-for-dollar basis. The best way to prove this is in your own plant. Let our distributor show you how both of these efficient machine tools can best be used in your production, toolroom or maintenance work. Time payment terms available.

7" Precision Bench Shaper - \$551

(Prices f.a.b. factory, less maters)

8" Pedestal Grinder-\$257

complete on two long-playing 23½ rpm high-fidelity records

WITH THIS MONTH'S RECORD - ON 7 DAYS FREE

An Exciting Way to Own the Best-Loved Symphonies, Concertos Operas, Musical Comedies—AT AN UNUSUALLY LOW COSTI

MAIL the coupon now and you will receive FREE - Beethoven's 9th Bymphony complete on two pure vinyl, long-playing high-fidelity records.

This is our Free Gift to introduce you to a new planned program called MUSIC TREAS-URES OF THE WORLD. Under this program you can now enjoy in your own home a complete library of the world's great music... beautifully recorded on the latest high-fidelity electronic equipment, with the full range of sound the human ear is capable of hearing (30-15,000 cycles per second)! Because assured distribution to members eliminates the usual expense of unsold records—and because of the development of mass production high-fidelity record pressing equipment—we can offer our members 12" long-playing high-fidelity records, most containing at least two complete works—for only \$2.98!

WHAT DOES THIS MUSIC PROGRAM INCLUDE?

All over the world—in Paris, Vienna, New York, Berlin, Milan—the engineers are recording and mastering the best-loved works of all the greatest composers, both serious and light. And these selections are all thrilling brand-new performances played by world-famous symphony orchestras under such eminent conductors as Walter Hendl, Herman Abendroth, Hans Swarowsky, Max Schoenherr, Kurt Graunke, Rich-

ard Kempe, Felix Prohaska, William Str George Sebastian.

FREE - MUSIC APPRECIATION COURSE

By accepting this offer now you will also be in our home study Music Appreciation to FREE. With each Music Treasures selection cept you will receive, free, a new issue of our Prepared by Joseph Machile, Assoc. Prof. of Queens College of N.Y.C. — this course ensity understand the fine points of music and it as do the critics and composers themselves

NOW THIS UNIQUE MUSIC PROGRAM WO

This great work is too long to be recorded on one 12" Hi-Fi record, (more than an houtening pleasure). It has therefore been transcribed on TWO 10" records. The curretion which will accompany the gift records future records, will be recorded on 12" diagold exclusively to members for only \$2.98 pleasts U.S. tax and shipping. This current is on approval; because we want to demonst great value only members of Music Transur Mail the coupon NOW.

ne mighty 9th Symphony

Towering high even among Beethoven's high even among the Ninth had accomplishments. The Ninth had accomplishments the Ninth had literally the Mt. Everest as a series of the sention of the state of the passes every emotion of the scheres the reliteking humor of the scheres the humor of the scheres haunting melody of the scheres are haunting melody of the school and haunting melody of the school and haunting melody of the school and haunting ment, afterning Beethoven's postational of the formal beethoven's relative to the instruments and hear it: above the instruments alnging schiller's Ode to Joy, concluding the ler's Ode to Joy, concluding approached by any other composer.
